# Preface

## Audience

This book is written for hardware installer/service personnel, system integrators, and field engineers.

**Notice:** This document is NCR proprietary information and is not to be disclosed or reproduced without consent.

## Safety Requirements

### Important Information to the User

In order to ensure compliance with the Product Safety, FCC and CE marking requirements, you must use the power supply, power cord, and interface cable which were shipped with this product or which meet the following parameters:

#### Power Supply

UL Listed (QQGQ), Class 2 power supply with SELV (Secondary Extra Low Voltage), non-energy hazard output, limited energy source, input rated 100–240 Vac, 1.5/0.8 A, 50/60 Hz, output rated 24 Vdc, 2.3 A. or 3.125A.

Use of this product with a power supply other than the NCR power supply will require you to test this power supply and NCR printer for FCC and CE mark certification.

#### Interface Cable

A shielded (360 degree) interface cable must be used with this product. The shield must be connected to the frame or earth ground connection or earth ground reference at EACH end of the cable.

Use of a cable other than described here will require that you test this cable with the NCR printer and your system for FCC and CE mark certification.

#### Power Cord

A UL listed, detachable power cord must be used for this product. For applications where the power supply module may be mounted on the floor, a power cord with Type SJT marking must be used. For applications outside the US, power cords which meet the particular country's certification and application requirements should be used.

Use of a power cord other than described here may result in a violation of safety certifications which are in force in the country of use.

## Wichtige Benutzerinformationen:

Um die Produktsicherheit und die FCC und CE-Markierungsanforderungen bei der Benutzung des Druckers sicherzustellen, müssen entweder das mitgelieferte Netzgerät, Netzanschlußkabel und Verbindungskabel verwendet werden oder folgende Anforderungen müssen erfüllt sein:

### Netzgerät:

Das Netzgerät muß ein UL verzeichnetes (QQGQ) Netzgerät der Klasse 2 mit SELV (Sekundärextraniederspannung), Nichtenergie Gefahrenausgang, begrenzter Energiequelle, einer Aufnahmeleistung von 100–240 VAC, 1.5/0.8 A und 50/60 Hz, und einer Leistungsabgabe von 24 VDC, 3.125 A.c sein.

Die Benutzung des Produktes mit einem Netzgerät, daß nicht von NCR mitgeliefert wurde erfordert das Testen des Netzgerätes mit dem NCR Drucker auf FCC und CE-Markierungs Befolgung.

### Verbindungskabel:

Bei der Benutzung dieses Produkts muß ein abgeschirmtes (360 Grad) Verbindungskabel benutzt werden. Die Abschirmleitung muß entweder mit dem Rahmens des Gerätes oder der Erde verbunden sein oder alternativ müssen alle Enden des Kabels geerdet werden.

Falls das Verbindungskabel nicht in der hier beschriebenen Art benutzt wird, müssen das Kabel und der NCR Drucker auf die FCC und CE-Markierungs Befolgung überprüft werden.

### Netzanschlußkabel:

Für dieses Produkt muß ein in UL aufgelistete, abnehmbares Netzanschlußkabel benutzt werden. Falls das Netzgerät fest auf dem Boden montiert ist, muß ein Netzanschlußkabel mit der SJT Markierung benutzt werden. Für Anwendungen außerhalb der USA, sollte ein Netzanschlußkabel benutzt werden, daß der Zertifizierung und Bestimmung des jeweiligen Landes entspricht.

**Das Abweichen der hier beschriebenen Benutzungsanleitung des Netzanschlußkabels kann gegen die gesetzlichen Sicherheitsbestimmungen des jeweiligen Landes verstoßen.**

## 用户须知

为了确保产品安全和遵守中国电磁兼容(EMC)规定,必须使用随产品附带或符合下列参数的电源,电源线和接口电缆:

### 电源

中国强制性产品认证, 输入为: 交流100 ~ 240伏, 1.5/0.8安倍, 50/60赫兹, 输出为: 直流24伏, 2.3或3.125安倍

如使用本产品与非NCR生产的电源产品, 必须测试电源和NCR生产的打印机以符合产品安全和**中国电磁兼容(EMC)**规定

### 接口电缆

本产品必须使用屏蔽(360度)接口电缆。屏蔽层必须连接到金属框架或接地或接口电缆两端的接地参考

使用没有在这里描述的接口电缆将要求您必须测试接口电缆和NCR生产的打印机以符合产品安全和**中国电磁兼容(EMC)**规定

### 电源线

中国强制性产品认证, 可拆卸的电源线.

使用没有在这里描述的电源线可能导致在该国的安全证书失效

## 销售打印机的安全规定

### 安全注意事项

#### 维修

**注意:**本产品不含有用户可自行更换的部件, 如需更换, 请联系有资质的技术人员。

#### 保险丝的更换

**注意:**为防止失火只可用相同规格的保险丝进行更换,

## 안전 주의 사항

### 서비스

주의 : 이 제품은 서비스 부품을 포함하지 않고 있습니다. 서비스는 자격이 있는 서비스 기술자에 의해 제공됩니다.

### 퓨즈 교체

주의: 화재의 위험에 대한 계속적인 보호를 위해 같은 타입과 등급의 퓨즈로 교체해야 합니다. 。

### 한국 업무용(A급 기기) 방송통신기자재

이 기기는 업무용(A급) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며, 가정 외의 지역에서 사용하는 것을 목적으로 합니다.

## Federal Communications Commission (FCC) Radio Frequency Interference Statement

**Warning:** Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

**Note:** This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

### Communication Cables

Shielded communication cables must be used with this unit to ensure compliance with the Class A FCC limits.

### Information to User

This equipment must be installed and used in strict accordance with the manufacturer's instructions. However, there is no guarantee that interference to radio communications will not occur in a particular commercial installation. If this equipment does cause interference, which can be determined by turning the equipment off and on, the user is encouraged to contact NCR immediately.

The NCR Company is not responsible for any radio or television interference caused by unauthorized modification of this equipment or the substitution or attachment of connecting cables and equipment other than those specified by NCR. The correction of interferences caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.

## Industry Canada (IC) Radio Frequency Interference Statement

This Class A digital apparatus meets all requirements of the Canadian Interference–Causing Equipment Regulations.

*Cet appareil numérique de la classe A respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.*

## Bundeskommunikationen Kommission (FCC) Hochfrequenz–Störungs Richtlinie.

**Warnung:** Änderungen oder Änderungen an der Maßeinheit, die nicht ausdrücklich von der Seite, die für die Befolgung verantwortlich ist, genehmigt ist, können zum Entzug der Benutzungsberechtigung dieses Gerätes führen.

**Anmerkung:** Dieses Gerät wurde getestet und entspricht der zulässigen Richtlinien eines digitalen Gerätes der Klasse A, gemäß Abschnitt 15 in den FCC Richtlinien. Diese Richtlinien sind dazu da, einen angemessenen Schutz gegen schädliche Störung bei der kommerziellen Nutzung dieses Gerätes zu gewährleisten. Dieses Gerät erzeugt und benutzt Hochfrequenzenergie und kann Hochfrequenzenergie ausstrahlen. Wenn die Installation und Benutzung dieses Gerätes nicht wie im Benutzer Handbuch beschrieben ist, durchgeführt wird, kann eine schädliche Störung von Funkverbindungen verursacht werden. Der Betrieb dieses Gerät in einem Wohngebiet kann schädliche Störung verursachen die auf Kosten des Benutzers behoben werden müssen.

### Kommunikationskabel:

Dieses Gerät muß in Übereinstimmung mit Kategorie A FCC Richtlinien mit einem abgeschirmten Kabel betrieben werden.

### Benutzerinformationen:

Dieses Gerät muß wie in der Hersteller Anweisungen beschrieben installiert und benutzt werden. Jedoch gibt es keine Garantie dafür, daß Funkstörung nicht in bestimmten kommerziellen Installation auftritt. Für den Fall, daß das Gerät Funkstörungen verursacht, was durch das An und Abschalten des Gerätes festgestellt werden kann, wird der Benutzer aufgefordert sofort mit NCR Kontakt aufzunehmen.

NCR ist nicht für Radio– oder Fernsehstörungen verantwortlich, die durch unautorisierte Änderung der Ausrüstung oder den Ersatz der anschließenden Kabel oder durch Anschluß von Geräten hervorgerufen wird, die nicht ausdrücklich von NCR genehmigt wurden sind. Die Korrektur von Störungen, die durch solche unautorisierte Änderung, Ersatz oder Zubehör verursacht werden, liegt in der Verantwortlichkeit des Benutzers.

## Industrie-Kanada (IS) Hochfrequenz-Störungs Richtlinie:

Dieses digitale Gerät der Klasse A entspricht allen Anforderungen der kanadischen Störung-Verursachende Geräte Richtlinie.

## 无线电频率干扰声明

### 用户须知

本设备已经过测试,证明其符合A级数字设备的限定。这些限制旨在对设备在商业环境中运作时提供合理的保护,以防有害干扰。本设备产生,使用,并能发射无线电频率能量。因此如果不按照使用说明书安装和使用,可能对无线电通讯造成有害干扰。如果在住宅区使用本设备很可能造成干扰。用户将被要求自费纠正干扰。

对于未经授权的修改或使用NCR规定以外的其他附件替换或连接电缆及设备, NCR不负责。

校正由此而产生的干扰将是用户的责任。用户需注意:未经NCR批准的改装可能导致用户无权操作本设备

### 中国电磁兼容声明:

此为A级产品,在生活环境中,该产品可能会造成无线电干扰。在这种情况下,可能需要用户自费对其干扰采取切实可行的措施。

## Caution labels information

Hot Surface, Do not touch / Surface chaude, Ne pas toucher.

Sharp edge. Keep fingers and other body parts away / Tranchant, Tenir les doigts et les autres parties du corps éloignés.

## Revision Record

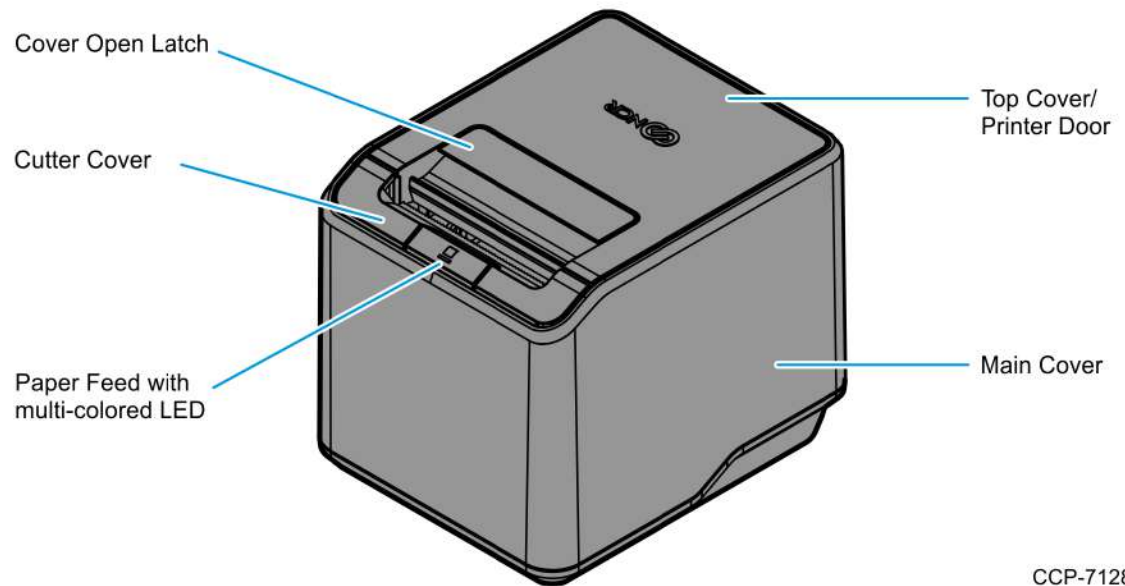

Issue	Date	Remarks
A	Mar 2017	First Issue
B	Dec 2017	<ul style="list-style-type: none"><li>• Updated the contact information in the "Ordering Thermal Receipt Paper" section.</li><li>• Updated the table in the "Other Supplies" section.</li><li>• Added cable routing options in the "Connecting the Cables" section for power supply cables with a ferrite bead.</li><li>• Added the "Stuck Cutter Blade" section in Chapter 2.</li></ul>

---

## Chapter 1: NCR RealPOS 7199 Thermal Receipt Station Printer

---

### General Description

The NCR RealPOS 7199 Thermal Receipt Station Printer delivers high-performance receipt printing in a compact and flexible solution. This printer provides a solution that is designed for any environment that requires thermal receipt printing.

The printer's high-speed thermal printing capability and proven reliability can help reduce transaction time, increasing customer satisfaction, and throughput. It prints crisp text, at a rate of 355mm or 14 inches per second, and sharp graphics in 16 levels of grayscale. The printer can be wall mounted, integrated with an NCR RealPOS terminal, or placed on the countertop as a front or top exiting receipt printer. It is flexible enough to meet the customer's changing needs or space constraints.

The printer can be connected to any host computer that uses USB communication interface. The printer is also available with RS-232C or LAN communication interface.

# Features and Options

The 7199 Thermal Receipt Station Printer comes with the proven features and functionality of the 7197 along with several new features and options that enhance the printer's performance, serviceability, reliability, and versatility.

## General Features

- Thermal printing
- Resident bar codes
  - Code 39
  - Code 128
  - UPS-A
  - UPC-E
  - JAN8 (EAN)
  - JAN13 (EAN)
  - Interleaved 2 of 5
  - Code-bar
  - PDF417
  - GS1 DataBar
  - QR
- Drop-in paper loading
- Paper Jam Sensor (detecting initial jam of paper at platen roller)
- Paper exhaust indicator
- Support Vertical/ Wall mount (90 Deg)
- Paper low sensing: adjustable through firmware for 40ft, 30ft, 20ft and 10ft
- Black mark sensor as factory option
- 19 resident character language Code Pages:
  - PC Code Page 437 (US English)
  - PC Code Page 850 (Multilingual)
  - PC Code Page 852 (Slavic)
  - PC Code Page 858 (with Euro symbol)
  - PC Code Page 862 (Hebrew)
  - PC Code Page 863 (French Canadian)
  - PC Code Page 864 (Arabic)

- PC Code Page 865 (Nordic)
- PC Code Page 866 (Cyrillic)
- PC Code Page 1252 (Windows Latin #1)
- PC Code Page 1256 (Arabic) – Contextual
- PC Code Page 1256 (Arabic) – Fixed
- PC Code Page Hungary
- PC Code Page Katakana
- PC Code Page 874 (Enhanced Thai)
- PC Code Page 932 (Windows-31J)
- PC Code Page 936 (Simplified Chinese)
- PC Code Page 949 (Korean)
- PC Code Page 950 (Mainland China)
- Unicode support (UTF-16)
- Auto knife cut
- Cover open sensors
- Industry standard USB communication interface
- Variant of Print Mode: High speed print mode, High quality print mode and Eco print mode
- Thermal Head Failure Detection
- One cash drawer connector (supports 2 cash drawers)
- Top and front exit receipt
- Multi-color LED
- Watermark and grayscale support

**Note:** The 7199 Thermal Receipt Station Printer does not use a paper journal.

## Thermal Print Head

The 7199 Thermal Receipt Station Printer uses a thermal print head for printing receipts. It is extremely fast and quiet. Because it uses heat to print directly on paper, there is no cassette or ribbon to change, eliminating soiled fingers and paper dust.

The print head does not need to be regularly cleaned and no regularly scheduled maintenance is required if the recommended paper is used. For more information, refer to [Ordering Thermal Receipt Paper](#) on the facing page.

If you notice spotty or light print, the thermal head could be dirty. Wipe the head with cotton swabs and rubbing alcohol. If spotty or light printing problems persist after the thermal print head has been cleaned, the print head could be damaged beyond repair.

The print head is designed to have a long life span, but it can be replaced overtime if needed. Only a trained service representative may replace the print head.

# Ordering Paper and Supplies

## Ordering Thermal Receipt Paper

The 7199 Thermal Receipt Station Printer requires NCR qualified thermal paper to be used on the thermal receipt print station to ensure proper operation of the printer. In addition, the paper rolls must have these dimensions.

Diameter	Length	Width
<b>80 mm Max</b> (3.12 in Max)	273 ft	<b>80 mm +0.5mm/-1.2mm</b> (3.15in +0.020in/0.047in)
<b>80 mm Max.</b> (3.12 in Max.)	273 ft	<b>58mm +0mm/-1.0mm</b> (2.28in +0in/0.039in)

The paper must not be attached at the core. If the paper is attached to the paper core, the print head may be damaged when the paper is exhausted.

### Paper grades available from Iconex

Paper Stock	Paper Grade Description
856911	Economy (for text printing)
856966	Standard Sensitivity (for text and simple graphics)
878559	High Sensitivity (for text, bar codes & detailed graphics)
856380	For improved achievability and added resistance to incompatible substances.
856461	Red/Black
856458	Blue/Black

To order thermal receipt paper, contact your sales representative or order from NCR at the following toll free number:

or local listing of Media Products sales office

## Other Supplies

Contact your sales representative to order the supplies listed in the following table.

Item	Type	Alias Number
External Power Supply	75W External Power Supply, No Power Cord	7167-K511
	75W External Power Supply with US Power Cord	7167-K510
	60W External Power Supply	7197-K510
AC Cables for External Power Supply	US Power Cord	1416-C325-0030
	UK Power Cord	1416-C321-0030
	SEV Power Cord	1416-C320-0030
	Australian Power Cord	1416-C322-0030
	International Power Cord	1416-C323-0030
	Argentina Power Cord	1416-C009-0018
Non-Powered RS-232 (Serial) Interface	1.0 meter	1416-C879-0010
	4.0 meters	1416-C879-0040
Non-Powered USB Cable	1.0 meter	1432-C083-0010
	4.0 meters	1432-C083-0040
Powered USB Cable	24V Powered USB Cable, 1.0 meter, Black	1432-C086-0010
	24V Powered USB Cable, 4.0 meters, Black	1432-C402-0040
Power Only USB Cable for Serial Configuration	1.0 meter	1432-C092-0010
	4.0 meters	1432-C092-0040

Item	Type	Alias Number
Cash Drawer Cable	1.8 meters	1639-K044
		1639-K043
		1639-K213
	0.6 meter (Y-Cable)	1416-C372-0006
		1639-K045
Narrow 58mm Width Paper Guide	Release 1.0	7199-K058
Ethernet Cable	8-wire	1432-C046-0030
Integrated Terminal Filler Plate		7607-K324
Rear Cable Cover		7199-K200
Under Counter Mounting Bracket		7199-K100
Serial Interface Module		7199-K001
Ethernet Interface Module		7199-K002

## What is in the Box

The following items are packed in the shipping box:

- Printer enclosed in a plastic bag and foam pack

These items may be ordered as options from NCR:

- Communication cable (from host computer to printer)
- Cash drawer cables

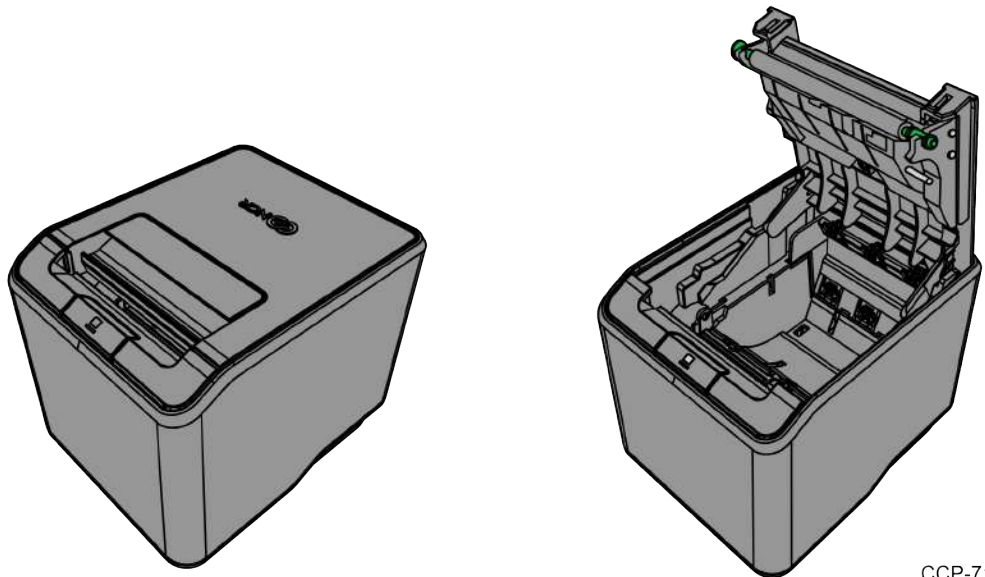

These cables may be ordered from other equipment suppliers. For more information, refer to [Ordering Paper and Supplies](#) on page 5.

- DC Power cable
- External Power Supply
- USB plus Power cables

## Removing the Packing Material

To remove the packing material, follow these steps:

1. Remove the printer from the foam pack.
2. Remove the plastic bag from the printer.
3. Save all packing materials for future storing, moving, or shipping of the printer.

CCP-71029

## Repacking the Printer

To repack the printer, follow these steps:

1. Place the printer in the plastic bag and in the foam pack.
2. Place the packed printer in the box.
3. Secure the box with packing tape.

# Cleaning the Printer

## Cleaning the Cabinet

The external cabinet materials and finish are durable and resistant to these items:

- Cleaning solutions
- Lubricants
- Fuels
- Cooking oils
- Ultraviolet light

The 7199 Thermal Receipt Station Printer does not require a scheduled maintenance. Clean the cabinet as needed to remove dust and finger prints. Use any household cleaner designed for plastics, but test it first on a small unseen area. If the receipt bucket is dirty, wipe it with a clean, damp cloth.

## Cleaning the Thermal Print Head

**Caution:** Do not spray or try to clean the thermal print head or the inside of the printer with any kind of cleaner as this may damage the thermal print head and electronics.

If the thermal print head appears dirty, wipe it with cotton swabs and isopropyl alcohol.

If spotty or light printing problems persist after the thermal print head has been cleaned, refer to [Troubleshooting Problems](#) on page 27.

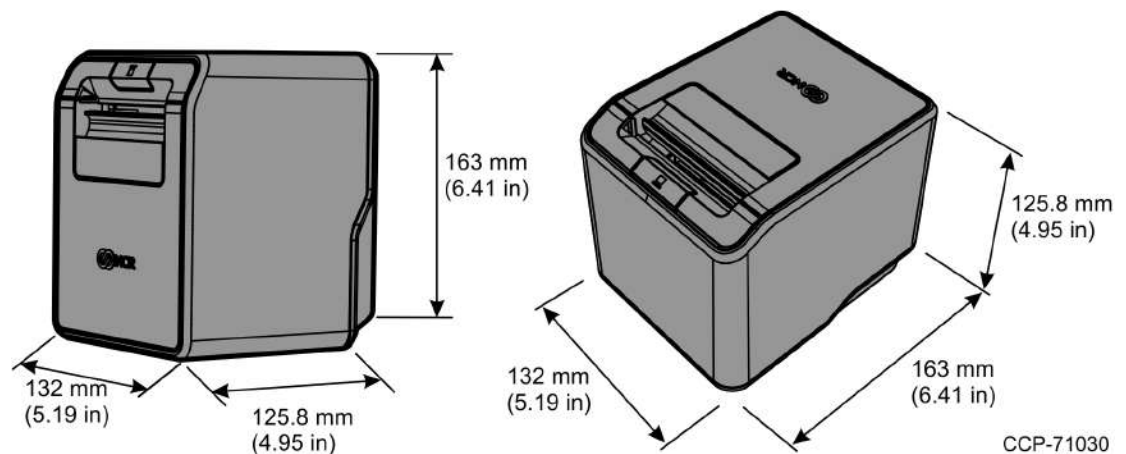

**Note:** The thermal print head does not normally require cleaning if the recommended paper grades are used. If non-recommended paper has been used for an extended period of time, cleaning the print head with cotton swabs and rubbing alcohol will not be of much benefit. For more information on the recommended paper, refer to [Ordering Paper and Supplies](#) on page 5.

# Choosing a Location

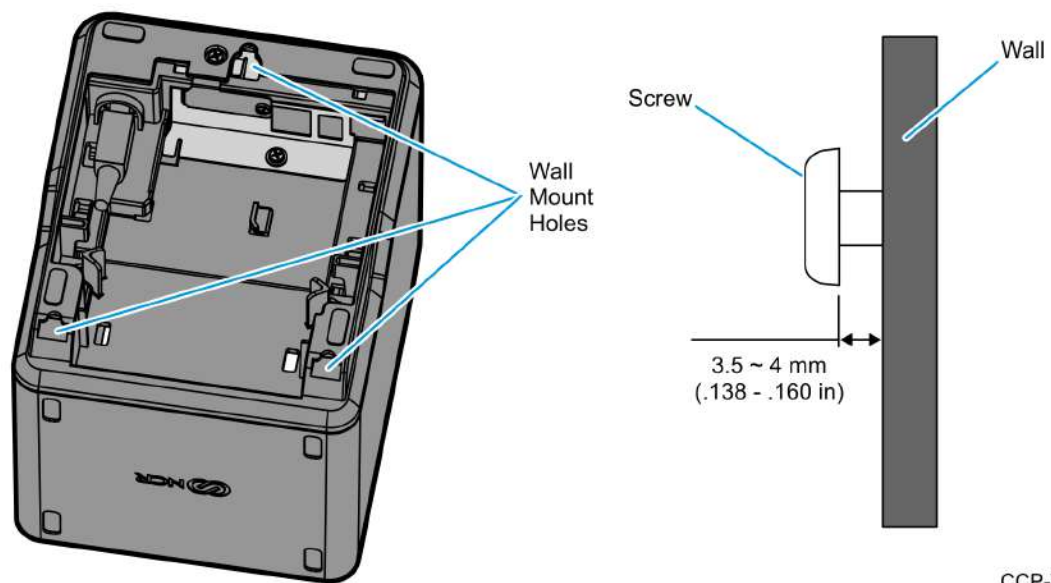

## Normal Table Top

The 7199 Thermal Receipt Station Printer takes up a relatively small counter space and may be set on or near the host computer. Make sure there is enough room to open the receipt cover to change the paper. The following illustration shows the actual dimensions of the printer, but leave several inches around the printer for connecting and accessing the cables.

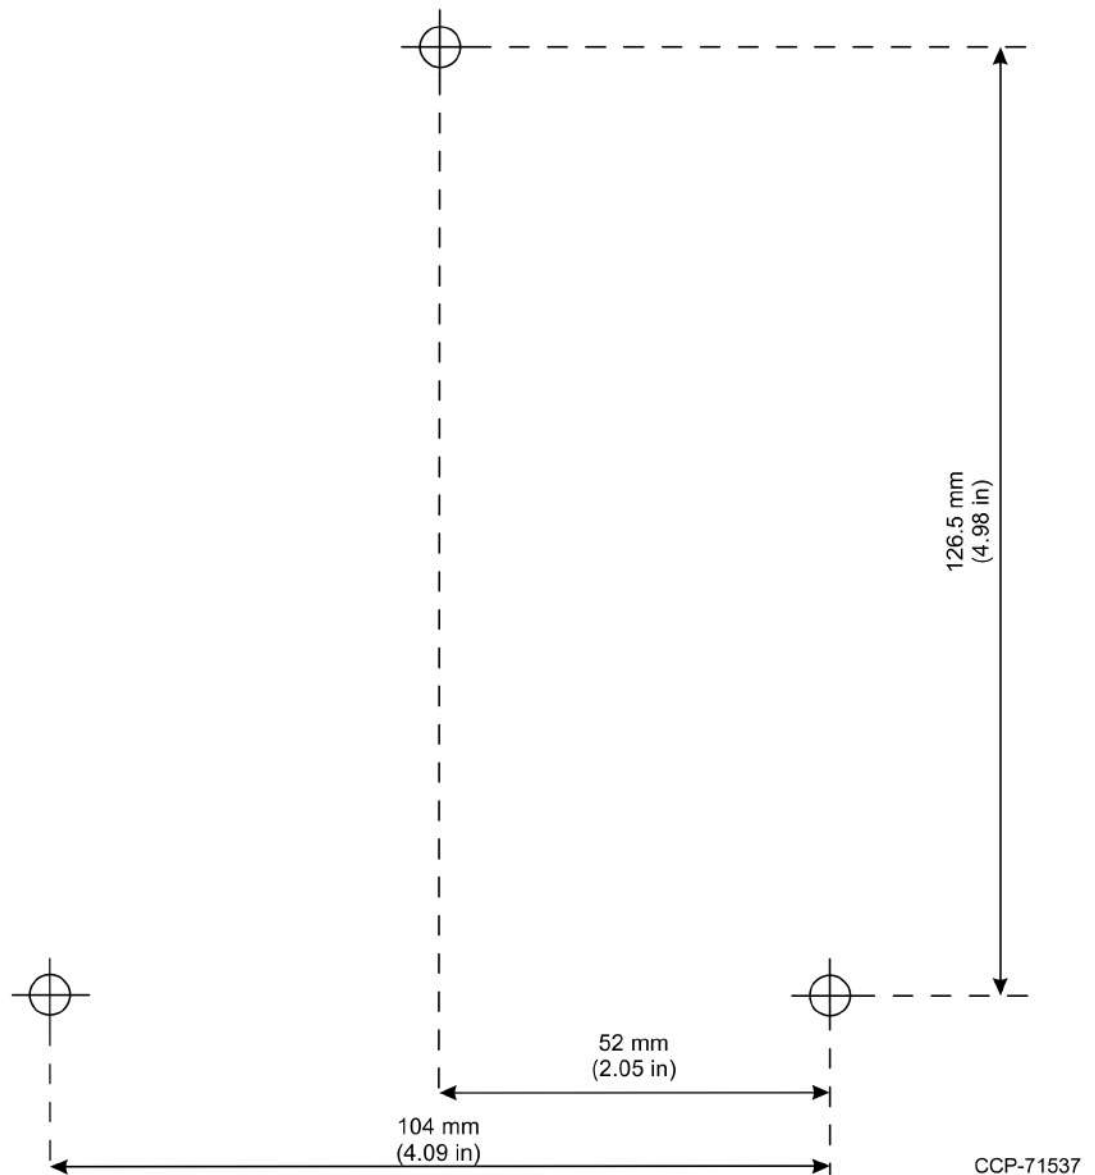

## Wall Mounted

The 7199 Thermal Receipt Station Printer may be mounted on a vertical wall. Make sure there is enough room to open the receipt cover to change the paper. Mount the screws on the wall using the following recommended mount dimensions. Use a #8 wood screw, which is to be securely fastened to a wall stud, or use a "Molly" fastener (not provided).

Print the following template to use as a guide for the wall screw position.

# Connecting the Cables

There are three different types of cables that connect to the printer:

- Power supply cable supplying power from the power supply
- Communication cable (USB) connecting the printer to the host computer
- Cash drawer cable connecting the printer to one or two cash drawers

**Caution:** Disconnect the power before connecting the cables. Always connect the communication cable and cash drawer cables before connecting power to the power supply. Always disconnect power to the power supply before disconnecting the communication and cash drawer cables.

To connect the cables, follow these steps:

**Note:** Refer to the images in the next sections for more information.

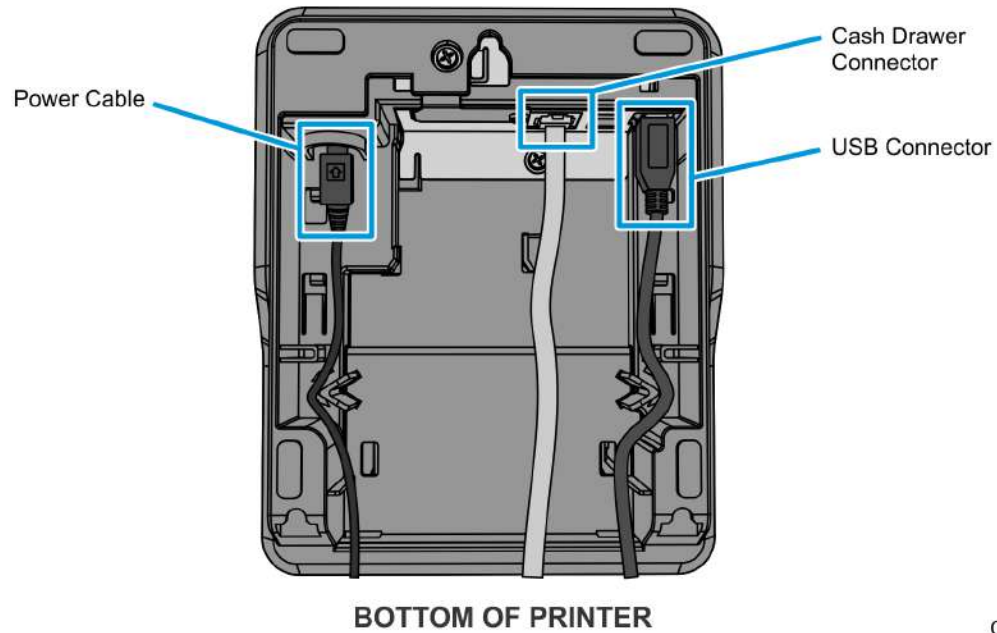

1. Unplug the power supply from its power source.
2. Connect the power and the USB communication cables to their respective connectors under the printer, as shown in the illustration. For the RS-232 communication cable, make sure to screw the communication cable to the communication connector.
3. Route the cables through the cable strain relief feature on the bottom of the printer, then connect the communication cable to the appropriate host computer connector.
4. Connect the cash drawer cable to the printer and cash drawer.

**Note:** The connector is a standard RJ11 located at the bottom of the printer.

5. Plug the power cord into the power supply for remote power supply installation, then plug the power supply into an outlet.
6. For Host powered installation, plug the DC cable into the POS terminal.

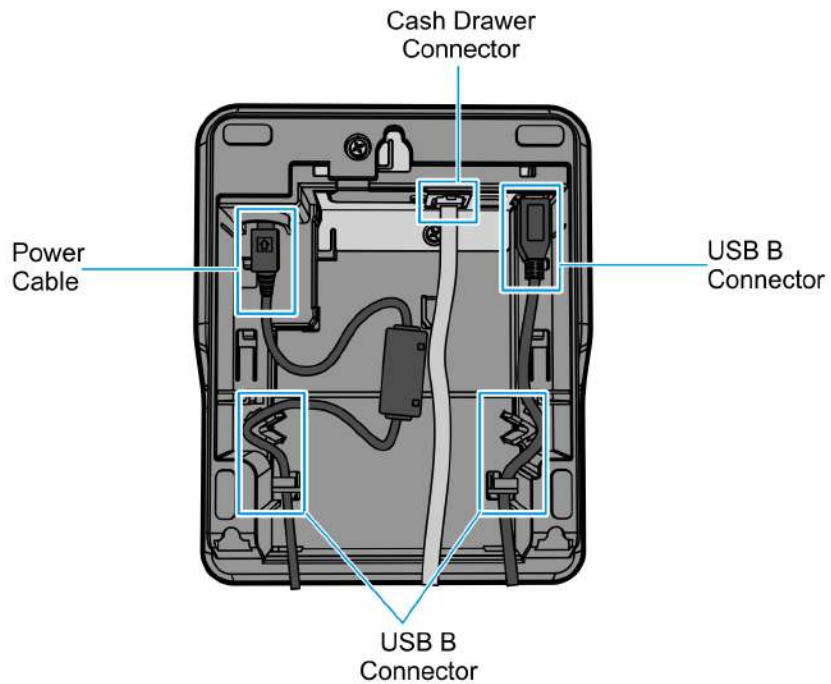

## USB Cable Connection

CCP-71027

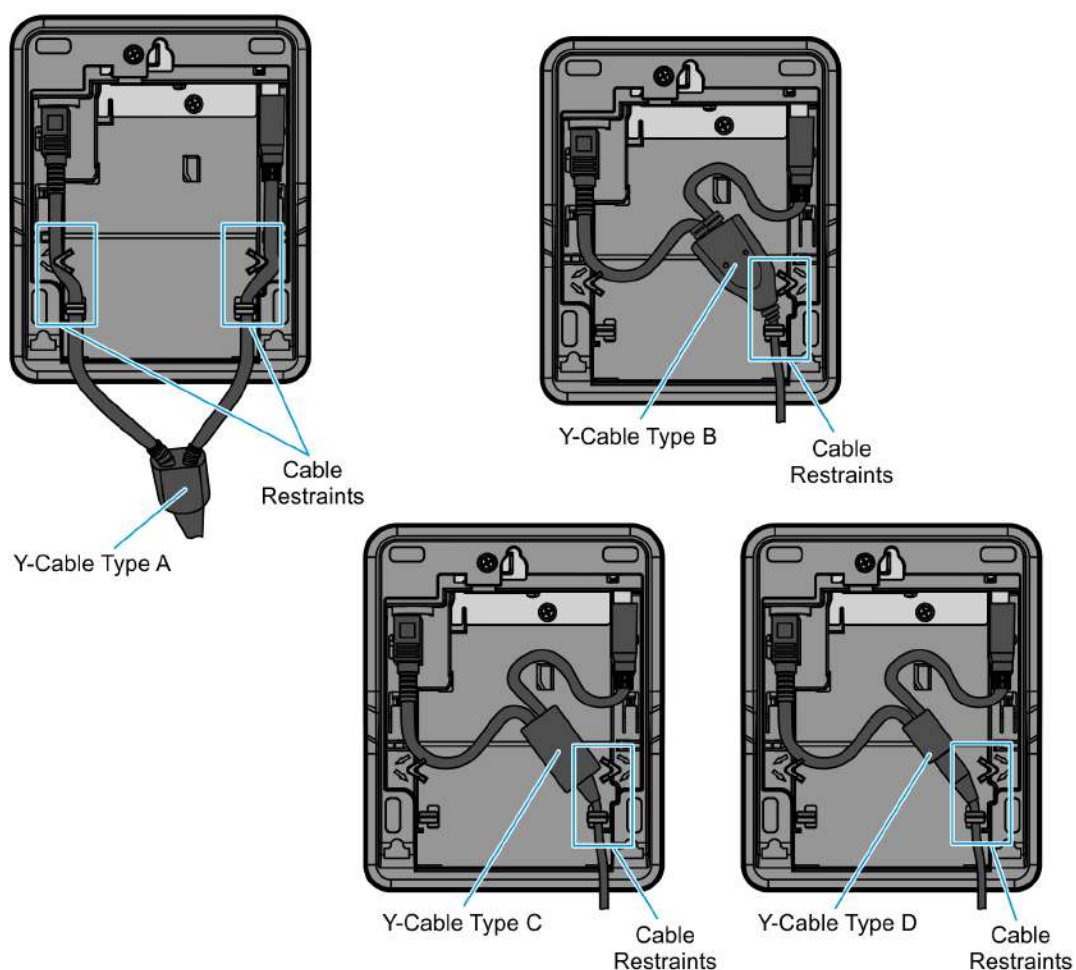

**Note:** If the power supply cable has a ferrite bead, follow the routing shown in the following image.

CCP-74100

## Different types of Y-cable routing method

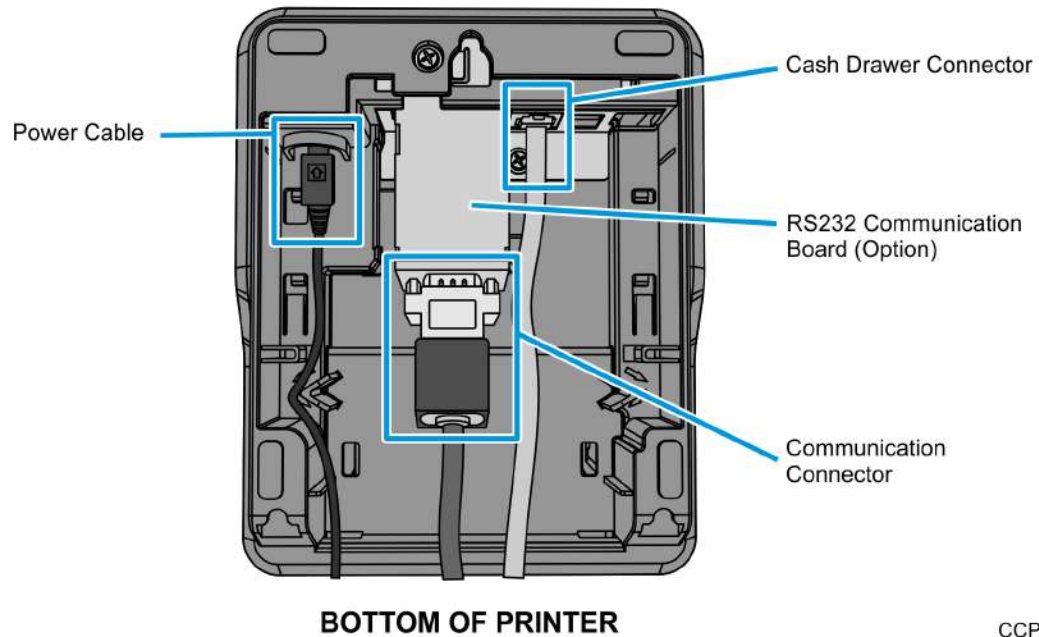

### BOTTOM OF PRINTER

CCP-71538

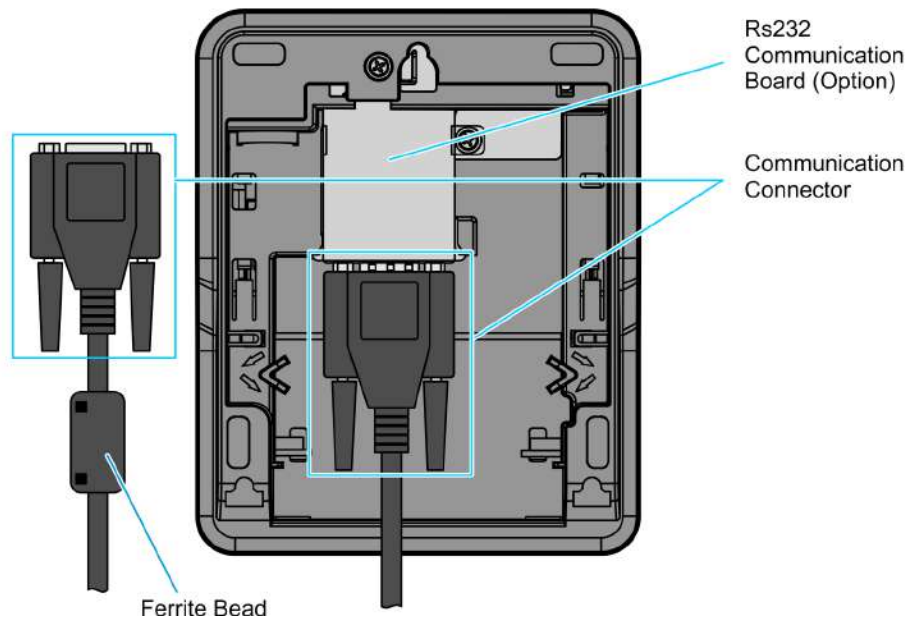

The following cable part numbers can be used for the Y-cable:

- 1432-C402-0040
- 1432-C086-0010
- 1432-C404-0040
- 1432-C328-0040
- 1432-C088-0010
- 1416-C881-0010
- 1416-C713-0010
- 1416-C640-0010

## RS-232 Cable Connection (Option)

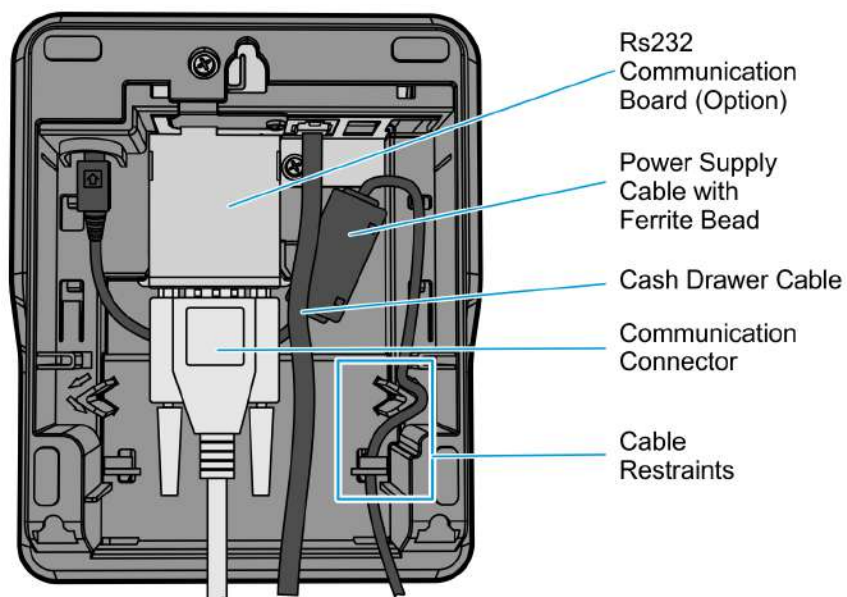

**Note:** If the RS-232 serial cable has a ferrite bead on one side, connect the side without the ferrite bead to the printer.

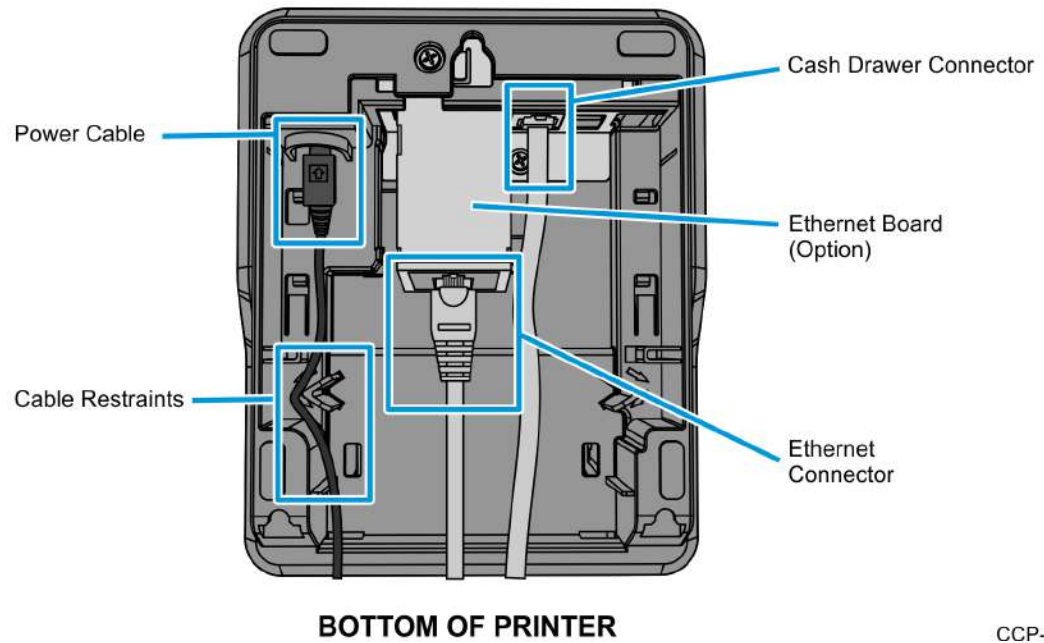

**Note:** If the power supply cable has a ferrite bead, route the cable under the communication connector and cash drawer cable, and then to the cable restraints. Do the same for the Ethernet Cable Connection.

CCP-74102

## Ethernet Cable Connection (Option)

## Checking for USB Support on the Host Computer

USB interface communications is required and the host computer must be equipped and set up properly. With the required hardware in place, the Windows POS Ready 2009 operating system natively supports plug-and-play USB with a built-in driver.

**Note:** You need an Internet access to download the USB drivers from the NCR Web site: [http://www5.ncr.com/support/support\\_drivers\\_patches.asp](http://www5.ncr.com/support/support_drivers_patches.asp).

## Host Configuration

Verify that the proper hardware has been installed in the host PC.

The following steps are applicable to systems running on a Windows POS Ready 7, a Windows 8, or a Windows 10 operating system:

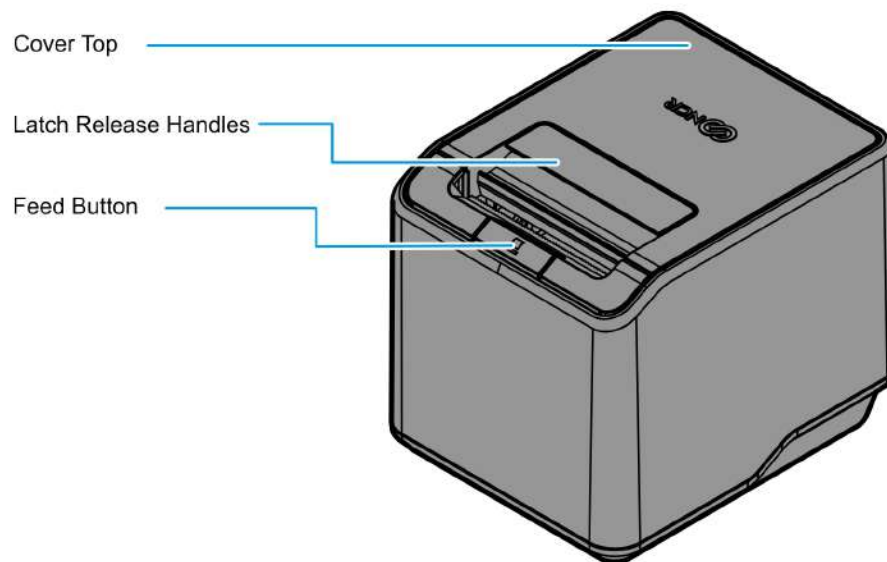

1. Open the Control Panel.
2. Click the Device Manager.
3. In the Device Manager window, scroll down the list of installed hardware devices until you find an entry for **Universal serial bus controller**.

If this entry exists, your host computer is set up for USB operation. If this entry does not exist, consult your computer documentation to see if USB must be enabled in the BIOS setup.

# Interface Description

## Human Interfaces

- Top Cover/Printer Door—the printer does not print or operate if the cover is open.
- Cover Open Latch—the Top Cover/Printer Door can be opened by lifting the latch.
- Paper Feed button—located on the top-front side of the printer.
- USB I/F Connector—mounted on the PCB Board.
- Printer Status LED—has three colors: Green, Amber, and Red.
- Thermal Paper—placed inside the printer. For information on the recommended thermal paper, refer to the [Ordering Thermal Receipt Paper](#) on page 5.

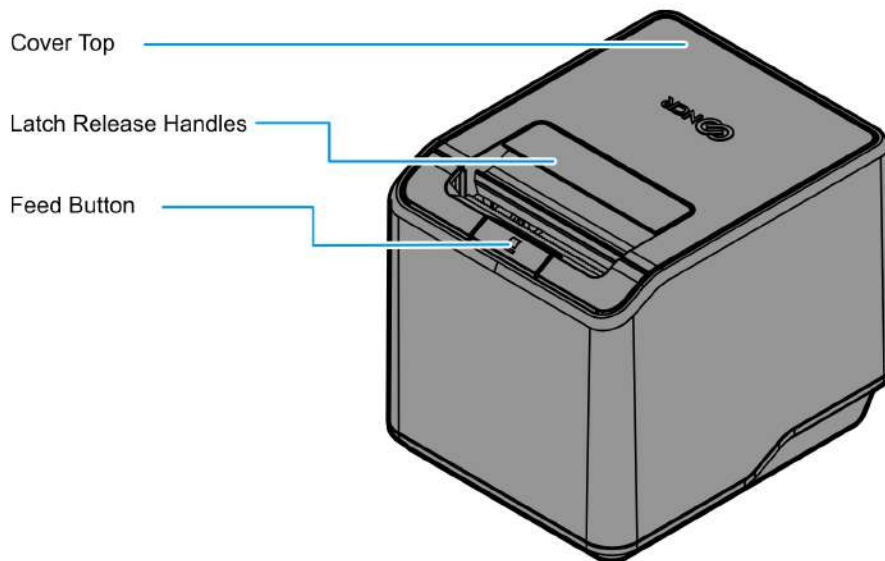

CCP-71222

# Using the Printer

To use the printer, follow these steps:

1. Connect the power supply to the printer and turn on the power source. The printer goes through a self-test routine to ensure everything is working properly, and then it “beeps.” After the printer has completed its “startup” cycle, it is ready to receive data. If the LED blinks, or the host computer indicates that there is a problem, refer to [Troubleshooting Problems](#) on page 27 for more information.
2. To perform a Configuration check (optional), reset the printer while holding the Paper Feed button, or open the receipt door and, while pressing the Paper Feed button, close the receipt door. Let go of the Paper Feed button when the printing begins.

CCP-71222

**Note:** The printer receives power when the power supply is on even if the printer is offline. To completely remove power, unplug the power supply from the outlet, or turn the POS terminal off.

## Loading and Changing the Receipt Printer

Change the paper when either of the following two conditions occurs:

- Amber LED blinks (slow): the paper is low.

There are approximately 1 ½ to 7 ½ meters (5–25 feet) of paper remaining on the roll. Change the paper as soon as possible to avoid running out half way through a transaction. Depending on the application, the host computer may alert you when the paper is low.

- Amber LED blinks (fast): the paper is out.

Change the paper immediately or data may be lost.

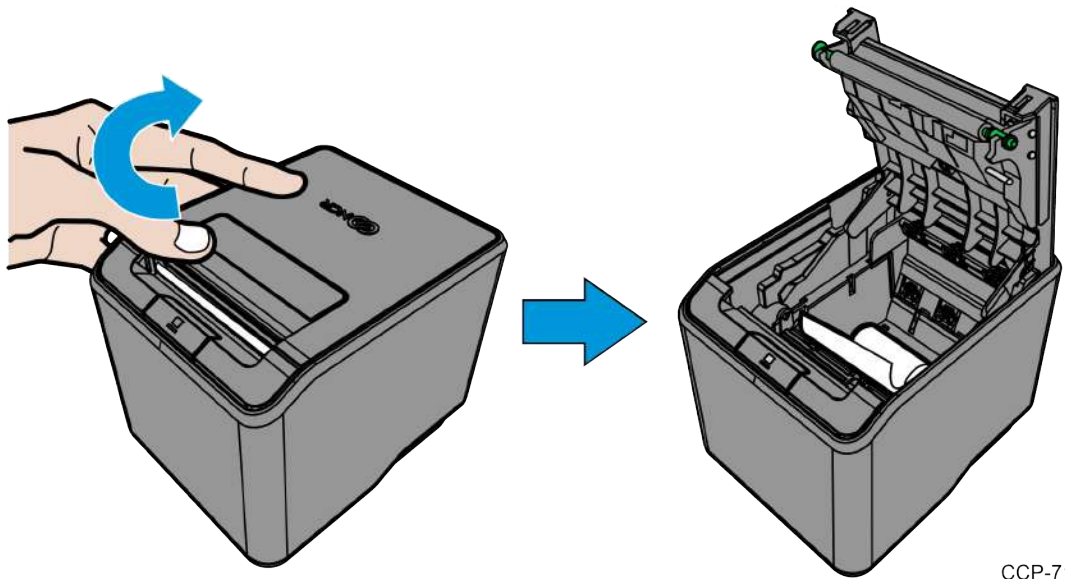

**Caution:** Do not operate the printer or host computer if the printer runs out of paper. The printer will not operate without paper, but it may continue to accept data from the host computer. Because the printer cannot print any transactions, the data may be lost.

## Removing the Paper Roll

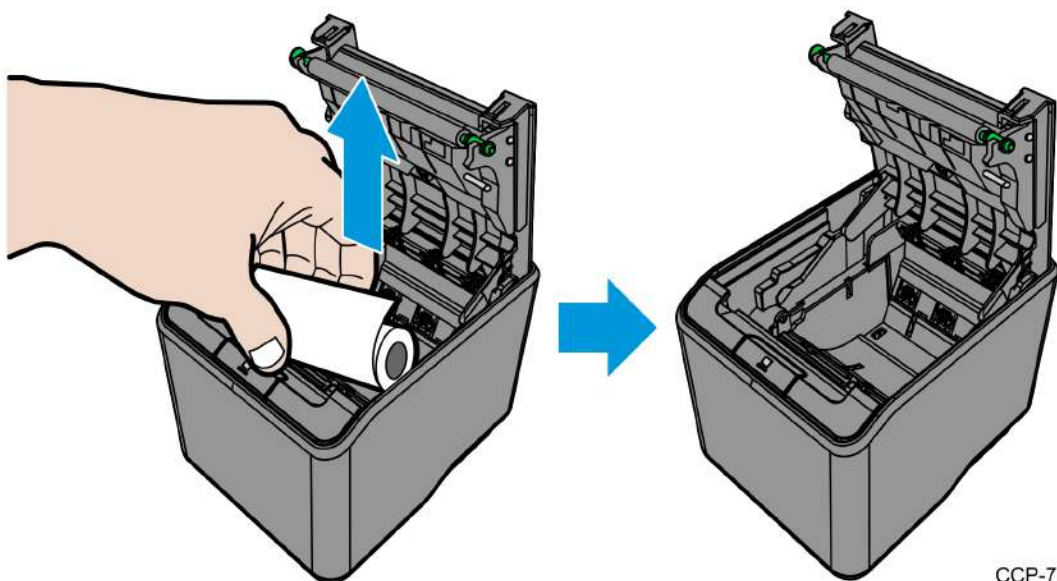

To remove the paper roll, follow these steps:

1. Open the receipt cover.

CCP-71032

2. Remove the used roll.

CCP-71033

## Loading the Paper Roll

To load the paper roll, follow these steps:

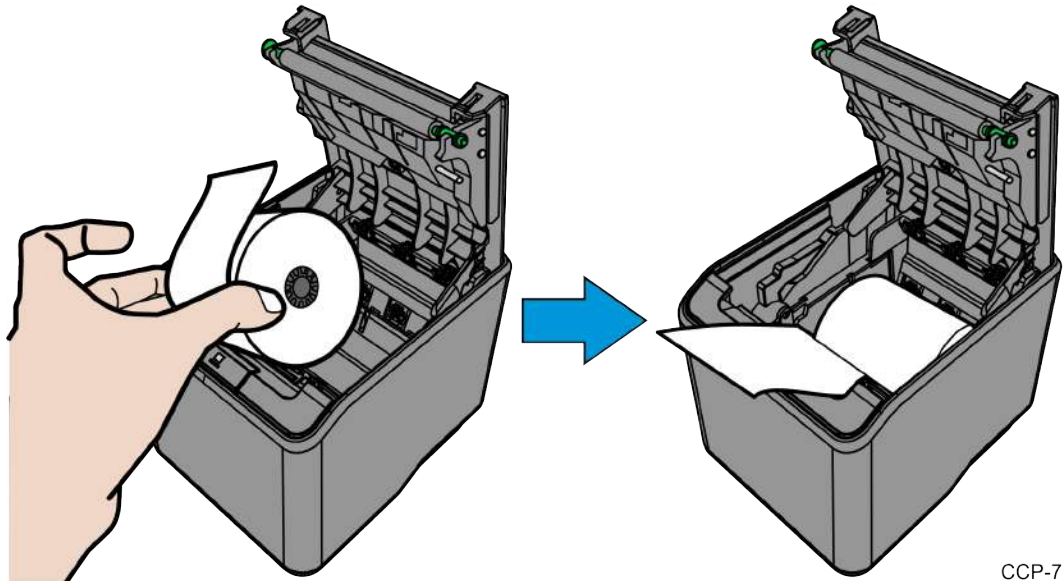

**Note:** Tear off the end of the new roll so that the edge is loose.

1. Place the new roll in the bin with a little extra paper extending over the front. Make sure that the paper unrolls from the bottom of the roll. Otherwise, the printer cannot print on the paper because the thermal coating is on the wrong side.

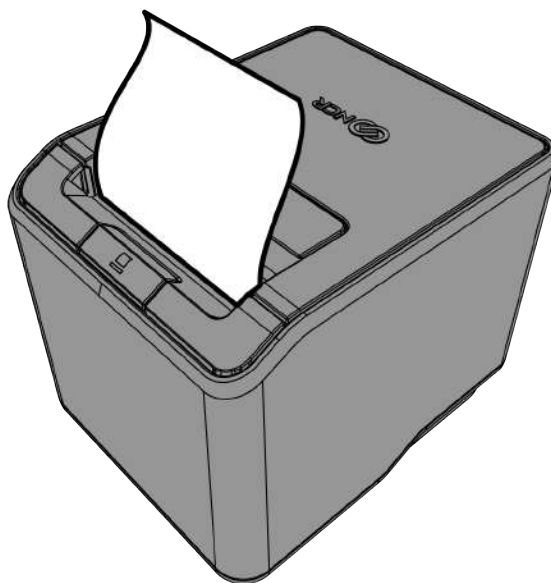

CCP-71064

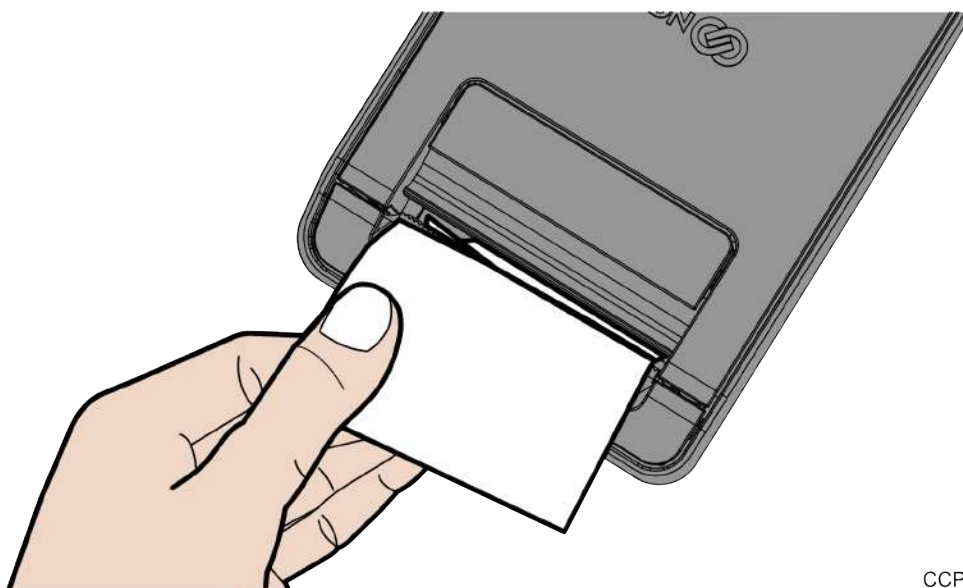

CCP-71034

2. Close the receipt cover.

CCP-71024

3. Remove the excess paper by tearing it against the tear-off blade.

CCP-71025

## Advancing the Paper

To advance the paper, follow these steps:

1. Press the Paper Feed button on the operator panel to advance the paper. The cover must be closed. To ensure print quality and proper alignment of the paper, advance about **30 cm** (12 inches) of paper.
2. Tear off the excess paper against the tear-off blade.

---

## Chapter 2: **Troubleshooting Problems**

---

### Overview

The 7199 Thermal Receipt Station Printer is a simple, generally trouble-free printer, but from time to time, minor problems may occur. The multi-colored LED lights provide associates with visual feedback for error correction. For some problems, the printer communicates the information to the host computer and relies on the application to indicate what the problem is.

This section describes some problems that you may encounter: problems that you can easily fix, and others that you will need to contact a service representative for.

You may be able to correct many of the conditions or problems without calling for service. However, if a problem persists, contact a service representative. For more information, refer to [Contacting a Service Representative](#) on page 35.

## Red LED is off or Printer Will Not Print

Cause	What to Do	Where to Go
Cables may not be connected properly	Check all cable connections. Check that the host computer and power supply are both on (the power supply is turned on by plugging it into an outlet).	Refer to <a href="#">Connecting the Cables</a> on page 13.
Power supply may be defective	If the power supply is plugged in but does not come on, order a new power supply.	Refer to <a href="#">Ordering Paper and Supplies</a> on page 5.

## Amber LED Blinking (Slow)

Cause	What to Do	Where to Go
Receipt paper is low*	There are about <b>4.5 meters, ± 3 meters</b> , (15 feet, ±10 feet) of paper left. Change the paper soon to avoid running out of paper part way through a transaction.	Refer to <a href="#">Loading and Changing the Receipt Printer</a> on page 22.

## Amber LED Blinking (Fast)

Cause	What to Do	Where to Go
Receipt paper is out	Change the paper now. Do not run a transaction without paper as the data may be lost.	Refer to <a href="#">Loading and Changing the Receipt Printer</a> on page 22.
Receipt cover is open	Close the cover. The printer will not operate with the cover open.	
Knife failure	Open the receipt cover and check the knife. Clear any jammed paper you can see. Tear off any excess paper against the tear-off blade.  Contact a service representative if this does not resolve the problem.	Refer to <a href="#">Amber LED Blinking (Fast)</a> above.
AC supply voltage is out of range	If paper is not low and no conditions indicate that the thermal print head is too hot, then it is likely that the power supply voltage is out of range.  Contact a service representative if this does not resolve the problem.	Refer to <a href="#">Contacting a Service Representative</a> on page 35.

Cause	What to Do	Where to Go
Thermal print head temperature is out of range	<p>The print head may overheat when printing in a room where the temperature is above the recommended operating temperature or when printing high-density graphics continuously, regardless of the room temperature. In either case, the printer will shut off. If the temperature of the print head is too hot, adjust the room temperature or move the printer to a cooler location.</p> <p>If the print head is overheating because of printing high density graphics continuously, reduce the graphics print density.</p> <p>If the printer continues to overheat, contact a service representative.</p>	<p>Refer to <a href="#">Physical and Operating Environment</a> on page 130 for the recommended temperature range for operating the printer.</p> <p>If the printer continues to overheat, refer to <a href="#">Contacting a Service Representative</a> on page 35.</p>
Power supply voltage is out of range	<p>If paper is not low and no conditions indicate that the print head is too hot, the power supply voltage is out of range. Contact a service representative.</p>	<p>Refer to <a href="#">Contacting a Service Representative</a> on page 35.</p>

# Receipt Printing is Light or Spotty

Cause	What to Do	Where to Go
Thermal print head may be dirty	<p>Open the receipt cover and clean the thermal print head with cotton swabs and isopropyl alcohol.</p> <p><b>Note:</b> Do not use the alcohol to clean other parts of the printer. Damage will occur.</p> <p>Contact a service representative if this does not resolve the problem.</p>	<p>Refer to <a href="#">Cleaning the Printer</a> on page 10.</p> <p>Refer to <a href="#">Contacting a Service Representative</a> on page 35.</p>

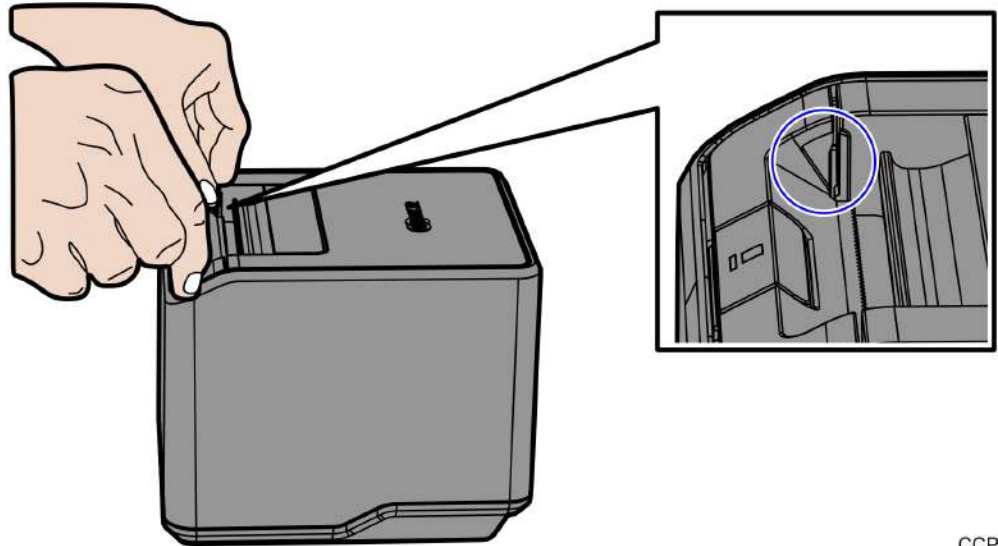

**Note:** The thermal print head does not normally require cleaning if the recommended paper grades are used. If a non-recommended paper has been used for an extended period of time, cleaning the print head with alcohol and cotton swabs will not be of much benefit. For information on the recommended paper, refer to [Ordering Thermal Receipt Paper](#) on page 5. For information on power consumption, refer to [Power Requirements](#) on page 129.

## Stuck Cutter Blade

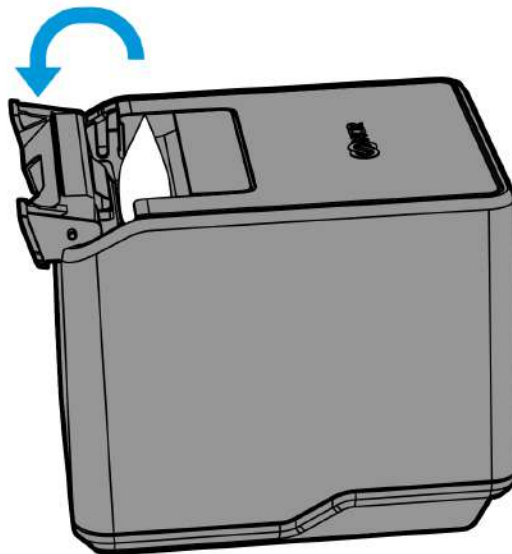

If a cutter blade is stuck in a fully extended position, do the following steps to fix it:

1. Open the front cover. To open the front cover, do the following:
  - a. Unlatch the front cover by pulling on the holes located on both sides of the front cover.

CCP-74103

- b. Flip to fully open the front cover.

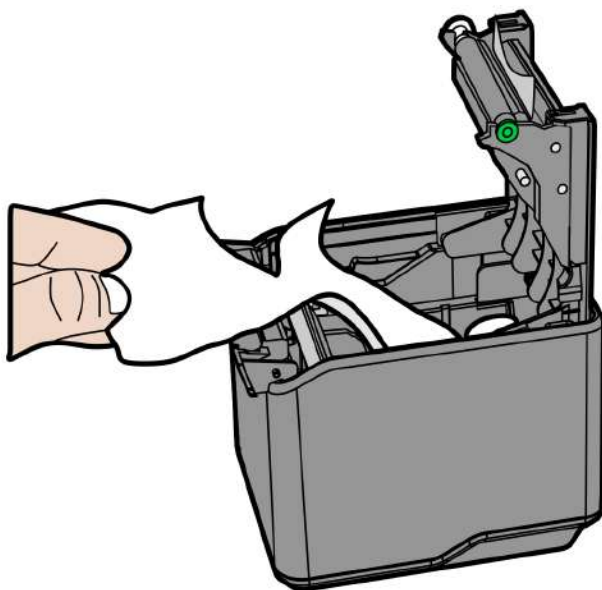

CCP-74104

2. Flip to open the top cover. the cutter blade is in the extended position.

CCP-74105

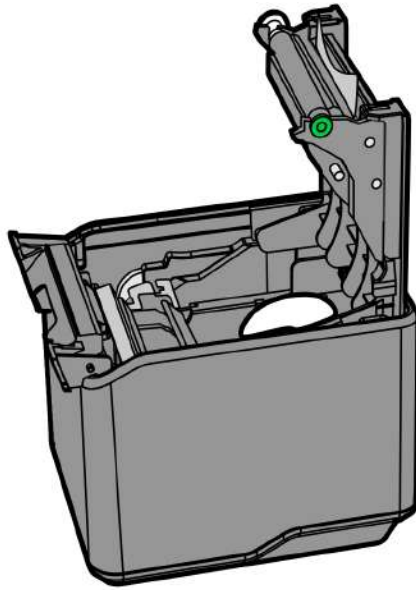

3. Remove the jammed paper.

CCP-74106

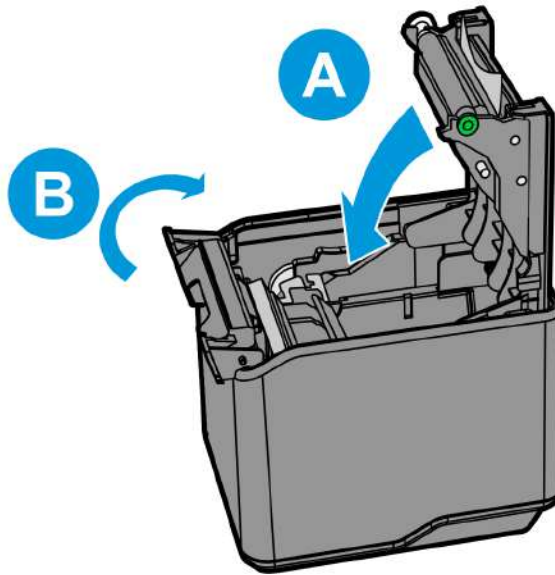

**Note:** Ensure that the paper is not at the paper exit area.

CCP-74107

4. Close the top cover (A) and then the front cover (B).

CCP-74108

When the printer detects that both covers are closed, the moving blade automatically retracts the exposed blade back to the cutter module.

**Note:** The printer does not operate if either the front cover or the top cover is not closed.

## Other Serious Problems

The following problems all need to be corrected by a qualified service representative. For more information, refer to [\*Contacting a Service Representative\*](#) below.

- Printer will not cycle or stop when required
- Illegible characters
- Paper will not feed
- Knife will not cycle or cut
- Printer will not communicate with Host

## Contacting a Service Representative

For serious problems, such as the printer not printing, not communicating with the host computer, or not turning on, contact your NCR–authorized service organization to arrange for a service call. In addition to the service guide listed below, other service–related materials may be available. Contact your NCR–authorized service representative to obtain these documents.

- *NCR RealPOS 7199 Thermal Receipt Station Printer Parts Identification Manual (PIM)* (BCC5–0000–5173)
- *NCR RealPOS 7199 Thermal Receipt Station Printer Service Guide* (BCC5–0000–5174)

---

## Chapter 3: Service Level Troubleshooting

---

### Diagnostics Overview

The 7199 Thermal Receipt Station Printer performs four types of diagnostic tests to help troubleshoot problems and to change the printer configuration. Each of these is described in detail in the sections that follow.

- **Startup (Level 0) Diagnostics**—the printer performs these tests during the startup cycle. For more information, refer to [Startup \(Level 0\) Diagnostics](#) on the next page.
- **Printer Configuration (Level 1)**—allows configuration of the printer using a Configuration Menu that is printed on a receipt. For more information, refer to [Printer Configuration \(Level 1\)](#) on page 39.
- **Runtime (Level 2) Diagnostics**—the printer checks the status during normal operation. For more information, refer to [Runtime \(Level 2\) Diagnostics](#) on page 91.
- **Remote (Level 3) Diagnostics**—the printer keeps track of counters during normal operation.

## Startup (Level 0) Diagnostics

The printer automatically performs startup diagnostics during the startup cycle when power is supplied or when the printer goes online. Startup diagnostics comprise the following actions:

1. Power off the printer.
2. Perform CRC check of the firmware ROM, read external RAM.

**Note:** Failure causes startup diagnostics to stop.

3. EEPROM check

**Note:** Failure causes startup diagnostics to stop.

4. Printer Status (Amber) LED is turned on.
5. Check if paper is present.
6. Return the knife to the home position.

**Note:** Failure causes a fault condition.

7. Check if printer Top Cover/Printer Door is closed.

**Note:** Failure causes turning on the Printer Status (Amber) LED until the Top Cover/Printer Door is closed.

When the last step is complete, the Paper Feed button is enabled and the printer is ready for normal operation. Information about the test is available in the communication interface through the commands.

If the printer has not been turned on, or a new EEPROM has been installed, the default values for the printer functions (set in Level 1 Diagnostics) are loaded into the EEPROM during startup diagnostics. For more information on the printer settings, refer to [Printer Configuration \(Level 1\)](#) on the facing page. If the EEPROM load has failed, the Printer Status LED is turned on.

## Printer Configuration (Level 1)

Level 1 diagnostics (setup mode) provides the functionality to change the settings for various printer functions.

Take note of the following information when changing the settings:

- The default options are set at the factory and are stored in the history non-volatile memory.
- After the settings are changed and stored in the non-volatile memory, the diagnostic setup is exited, which saves the settings.

**Caution:** If you are changing the printer settings, make sure to add the correct settings for that particular function or test to avoid accidentally changing the settings for another function or test. If the settings are accidentally changed, re-enter the setup mode, and then re-enter the correct settings. If you need assistance, contact a service representative. For more information, refer to [\*Contacting a Service Representative\*](#) on page 35.

## Runtime (Level 2) Diagnostics

Runtime diagnostics occur during normal printer operation. When the following conditions occur, the printer automatically turns off the appropriate motors and disables printing to prevent damage:

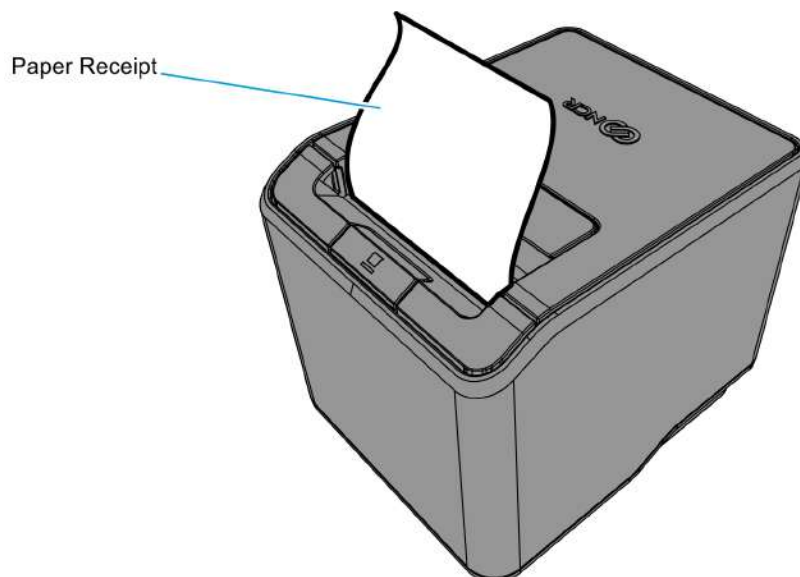

- Paper out
- Cover open
- Knife unable to home
- Print head too hot
- Power supply voltage out of range

The Printer Status (Green) LED signals when these conditions occur and indicates the state or mode of the printer.

The Printer Status LED has 3 colors: green, amber, and red.

LED indication for Printer Status LED is shown as below.

## Configuring the Printer

CCP-71026

Use the Configuration Menu to select functions or change various settings as indicated in the next sections. The Configuration Menu prints instructions and setting options interactively as the user goes through the configuration process.

**Caution:** Be extremely careful in changing any of the printer settings to avoid changing settings that might affect the performance of the printer.

Reset the printer while pressing the Paper Feed button and opening and closing the slip cover door or disconnecting and reconnecting the power cable. The printer prints the current settings, and then cuts the paper.

## Software or hardware configuration

To configure the software or hardware, follow these steps:

1. Open the Top Cover/Printer Door, and then check if the printer has paper.
2. Insert a paper roll if no paper is found.
3. Restart the printer while pressing the Paper Feed button.

The printer beeps, prints the current configuration, and then waits for you to make a selection from the Main Menu on the printout.

```

=====      Main Menu      =====
EXIT                               -> No Click
Print Printer config              -> 1 Click
Emulation                        -> 2 Clicks
Hardware                         -> 3 Clicks
Reset all EEPROM to Default      -> 4 Clicks
Printer Maintenance Info        -> 5 Clicks
Interface (Ethernet or RS232C) -> 6 Clicks

```

4. Press or click the Paper Feed button based on the number of clicks associated to your desired option as stated on the Main Menu, then hold the button down for at least one second to validate.

The following is an example of configuring the printer for Emulation.

This option is to set Sync Mode, LPI, Carriage, Asian Mode, Code Page, Special Font, Compress Pitch Font, 48 Character Mode, PDF417 Max Columns, Auto Reset mode, Compatible Top Margin.

To enter into emulation mode, press the Paper Feed button twice as short click and do long press until a beep sound is generated.

By following the above steps, the sub menu will appear as follows:

```

*****EMULATION*****
Receipt sync           -> 1 Click
Default LPI           -> 2 Clicks
Carriage              -> 3 Clicks
Asian mode            -> 4 Clicks
Code Page             -> 5 Clicks
Special Font          -> 6 Clicks
Compress Pitch Font   -> 7 Clicks
48 Character Mode     -> 8 Clicks
PDF417 Max Columns    -> 9 Clicks
Auto Reset            -> 10 Clicks
Compatible Top Margin  -> 11 Clicks

```

Printer Configuration form indicates the printer individual information and configurations.

## Installing the USB Virtual COM Port Driver for Printer

### Windows POS Ready 7

To install the USB Virtual COM Port Driver for printer on a Windows POS Ready 7 system, follow these steps:

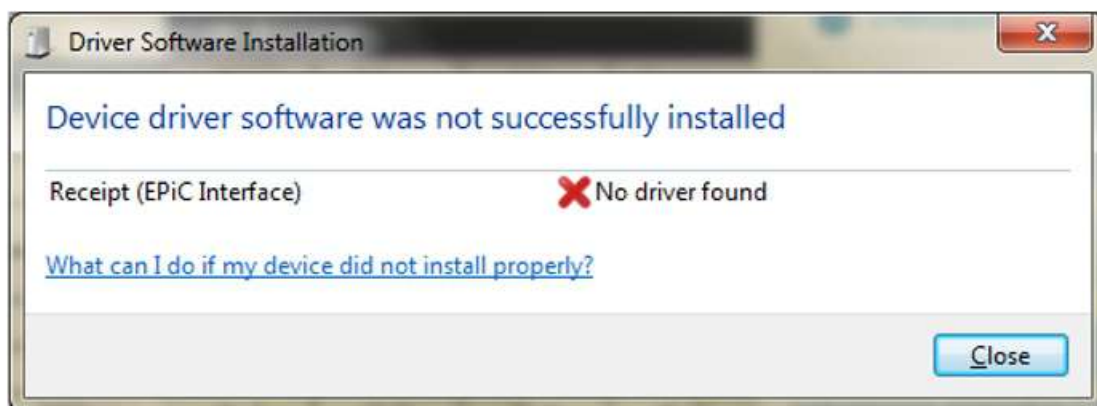

1. The printer beeps when it is plugged in to show the USB device is recognized. The Driver Software Installation window is displayed. Select **Skip obtaining driver software from Windows Update** to skip getting driver software from Windows Update.

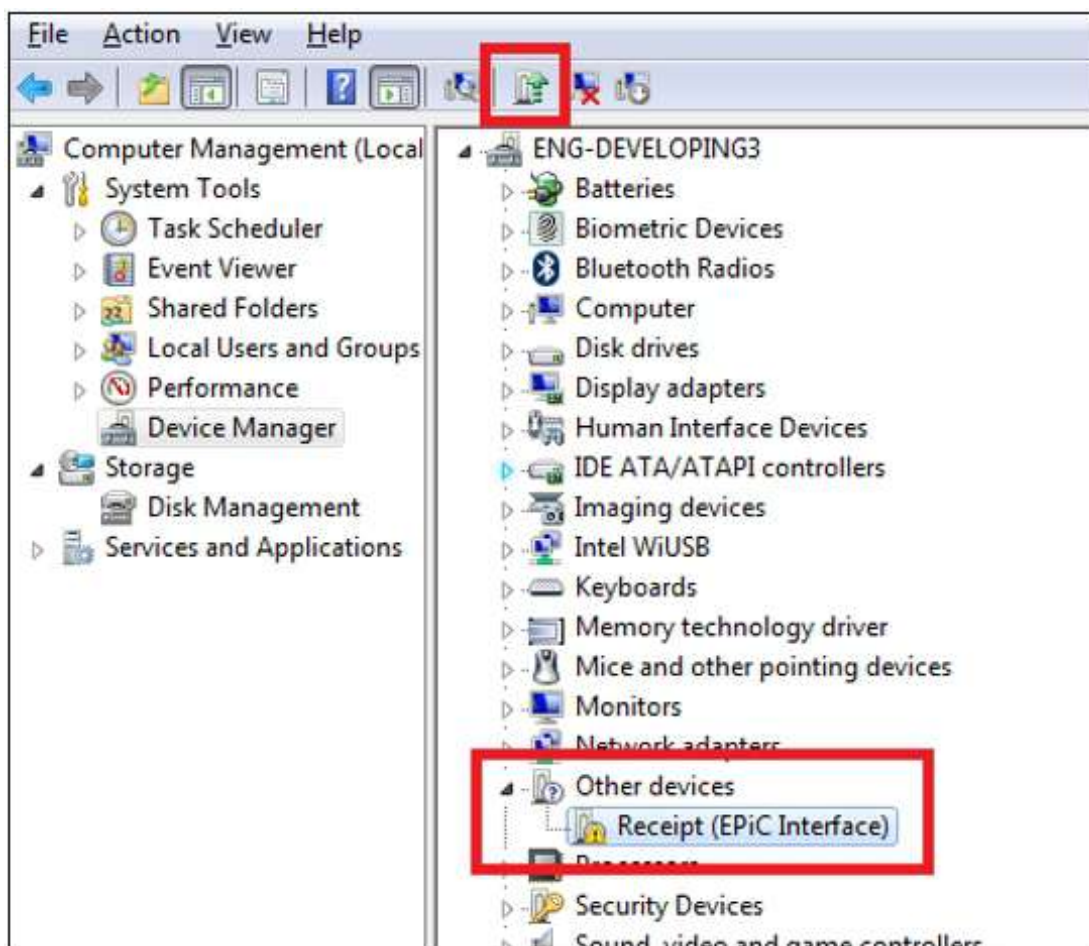

The following window is displayed.

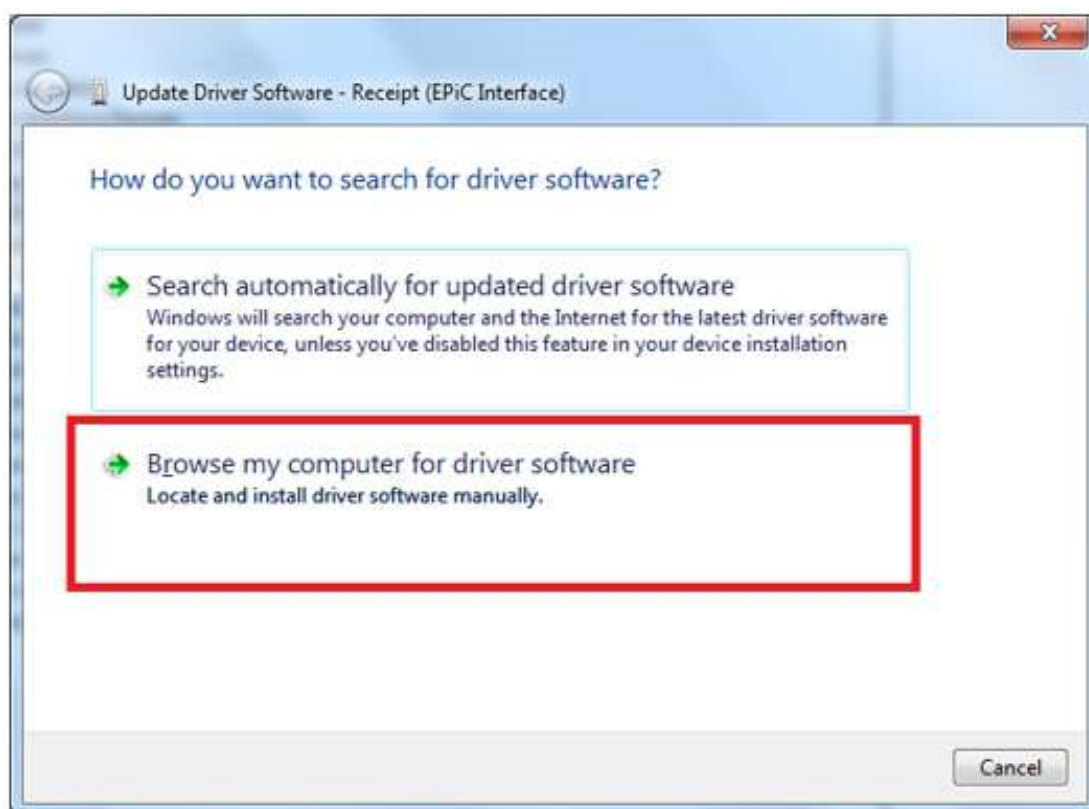

2. Select **Yes**. The following window is displayed.

3. Open Device Manager, and then select **Receipt (EPiC Interface)**.
4. Select the **Update Driver Software** button.

5. Select **Browse my computer for driver software**.

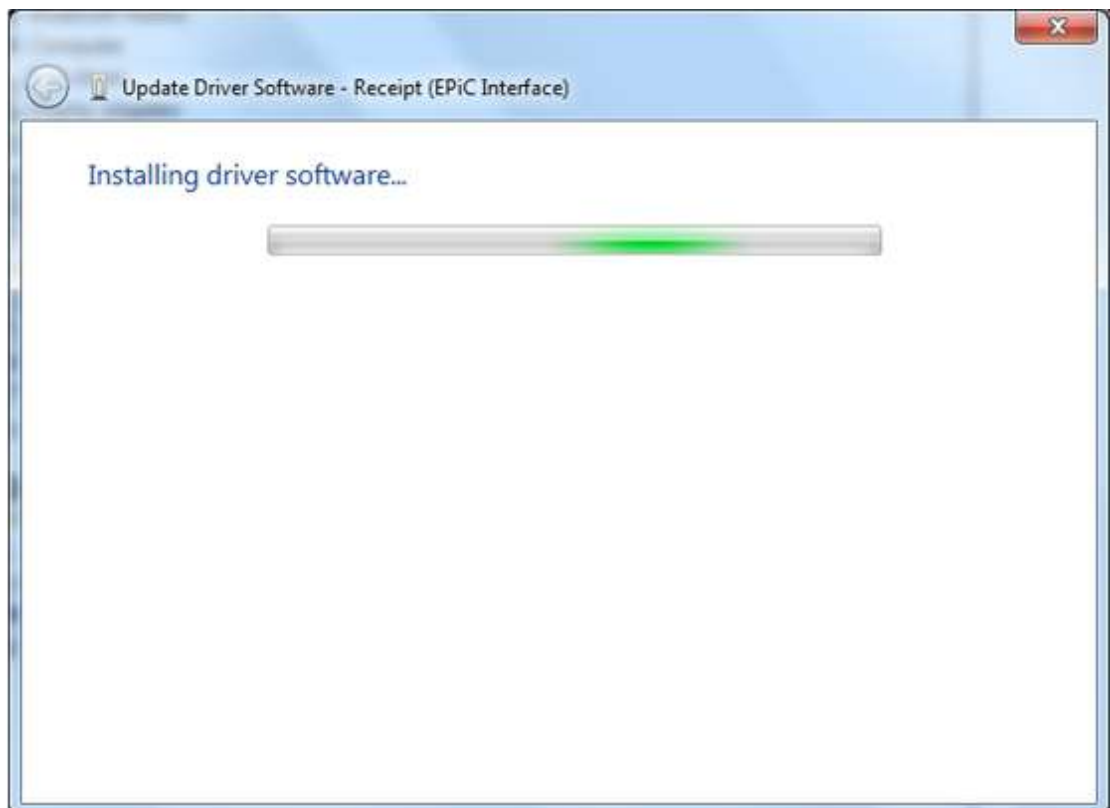

6. Select **Browse**, and then select the Edgeport Driver folder.

7. Select **Next**.

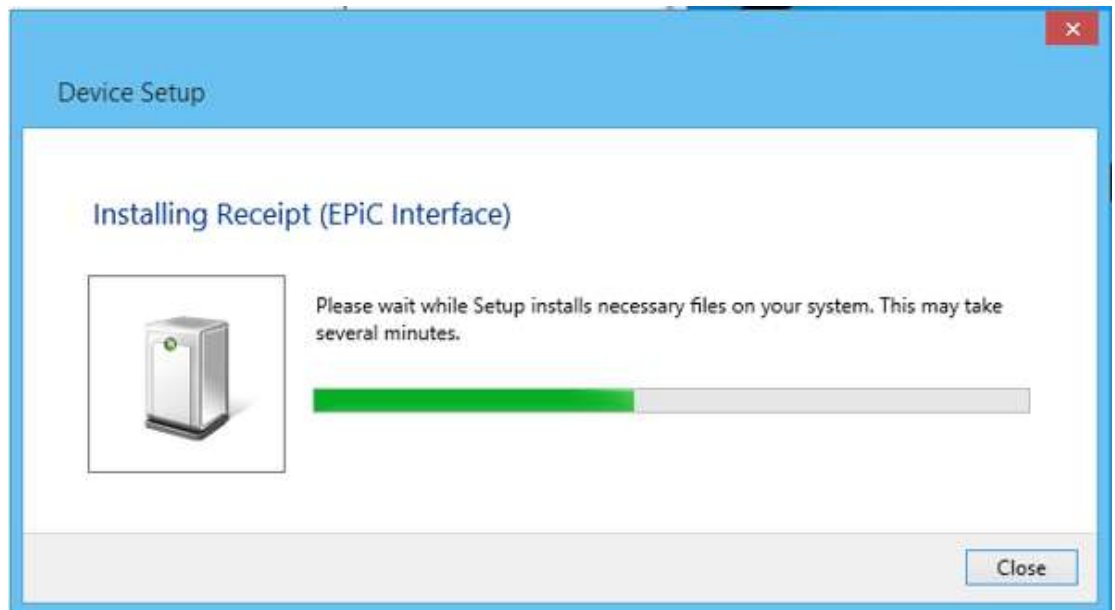

The system starts installing the printer driver.

## Windows 8

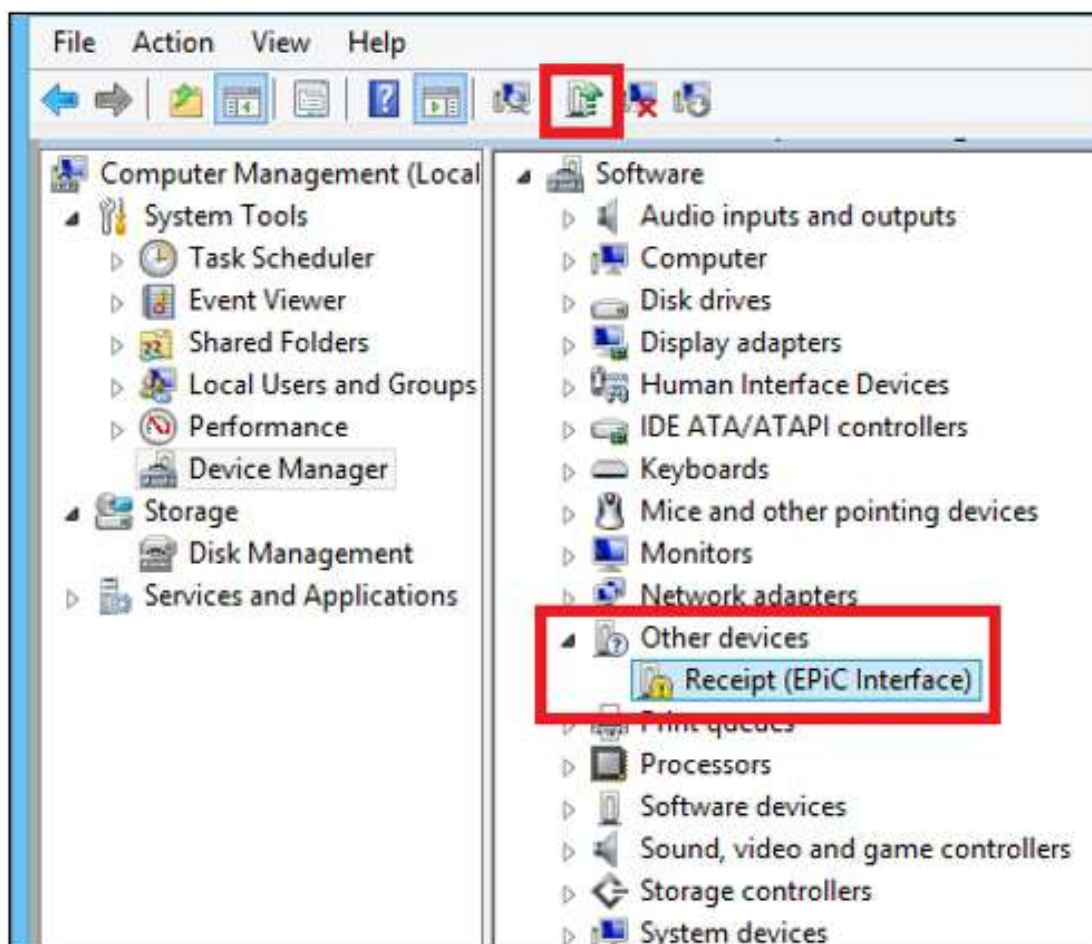

To install the USB Virtual COM port driver for printers on a Windows 8 system, follow these steps:

1. The printer beeps when it is plugged in to show the USB device is recognized. Device Setup window displays that the Installing Receipt (EPiC Interface) process is ongoing.

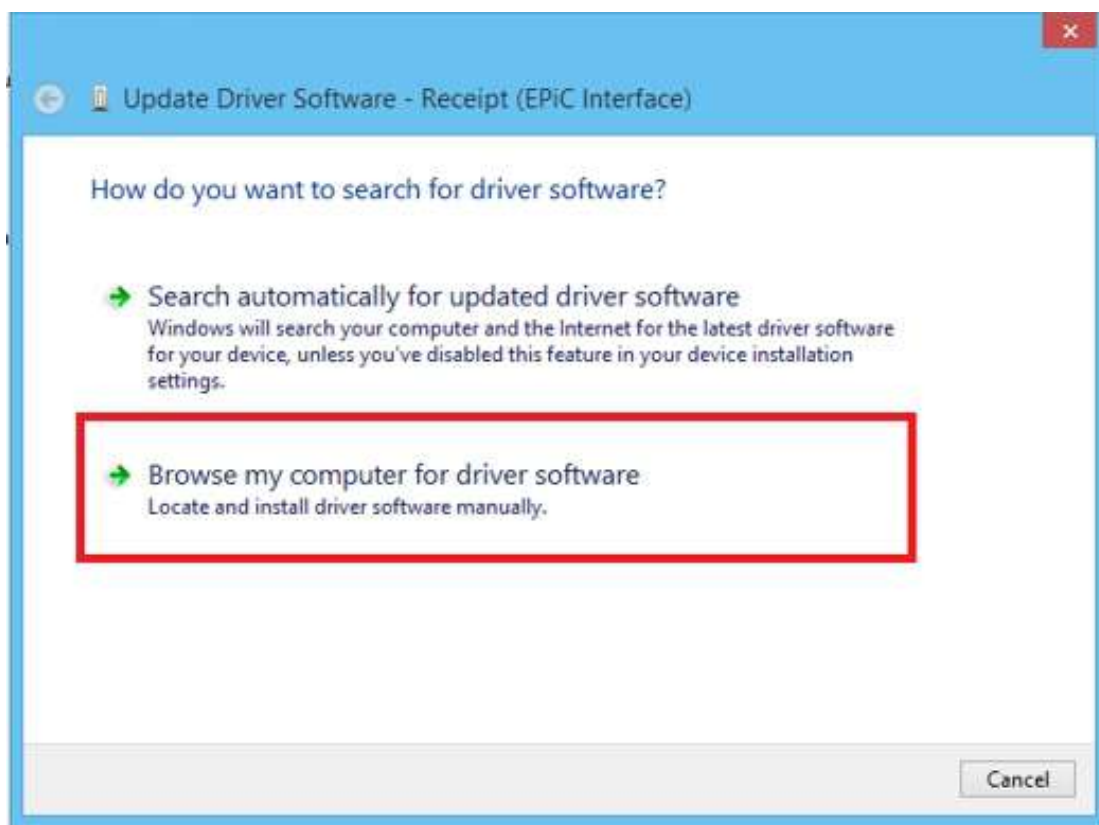

2. Open the Device Manager, and then select **Receipt (EPiC interface)**.

3. Select the **Update Driver Software** button.

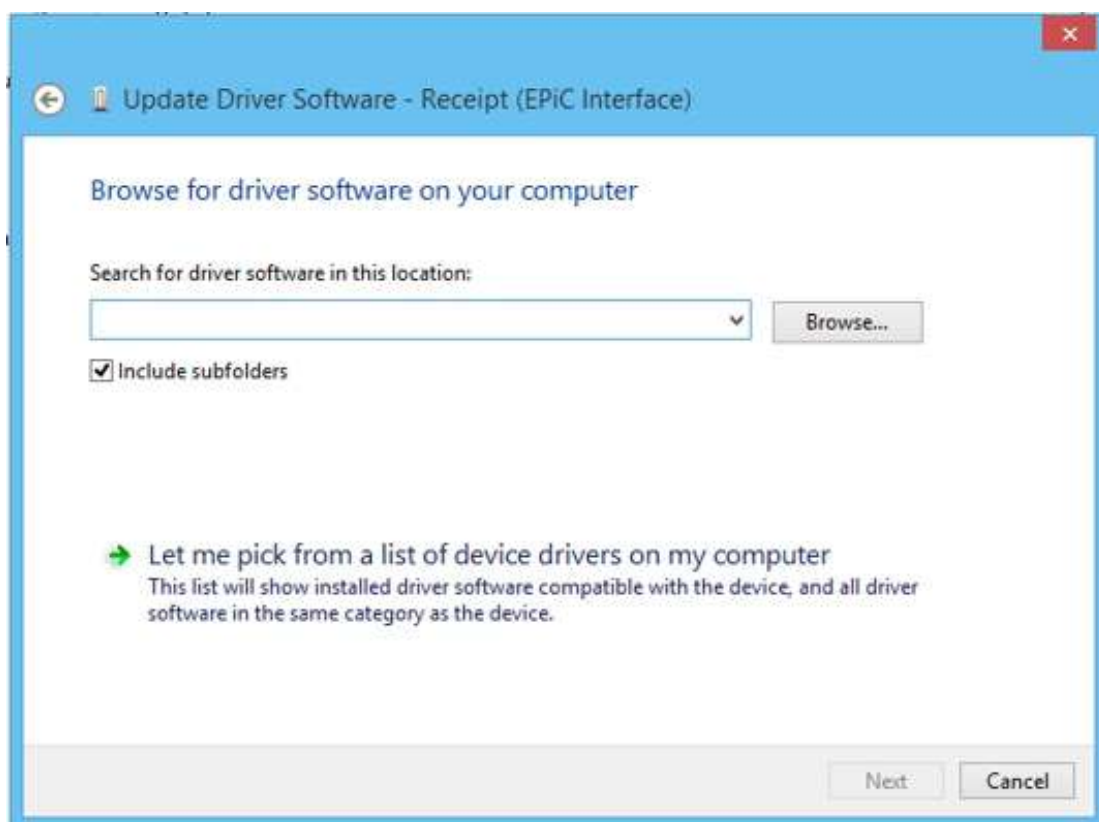

4. Select **Browse my computer for driver software**.

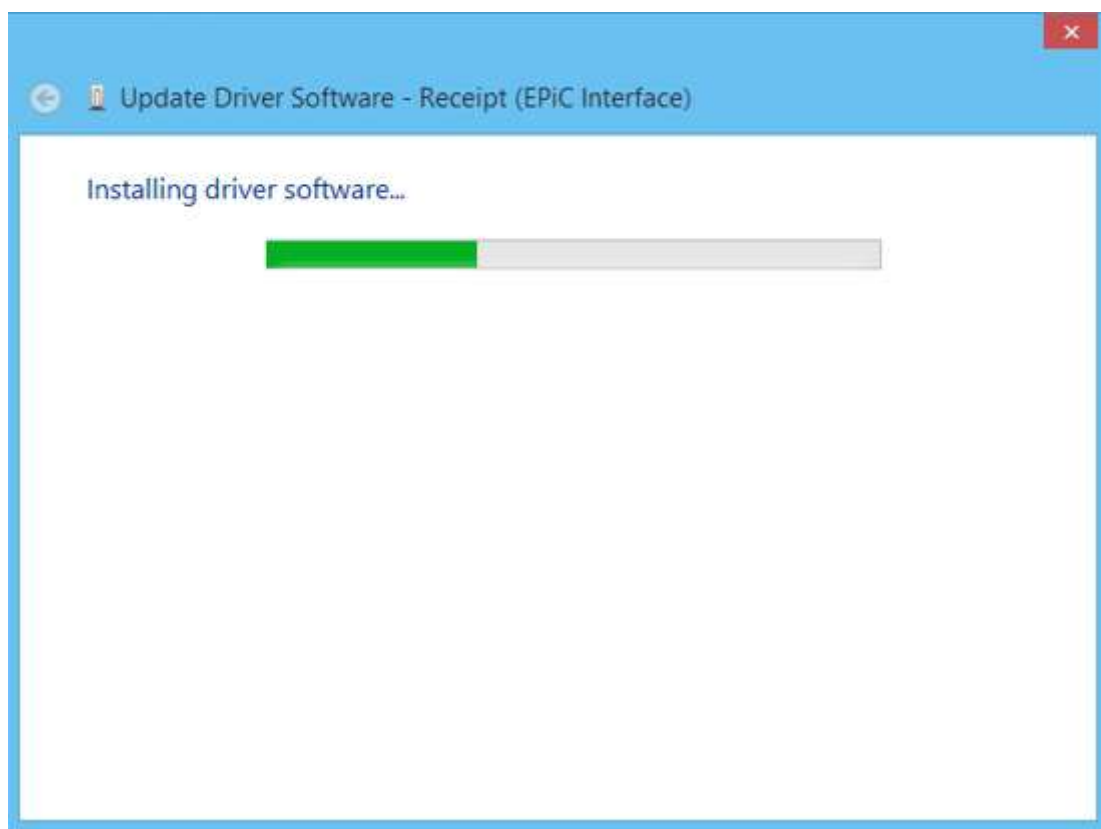

5. Select **Browse**, and then select the **Edgeport Driver** folder.

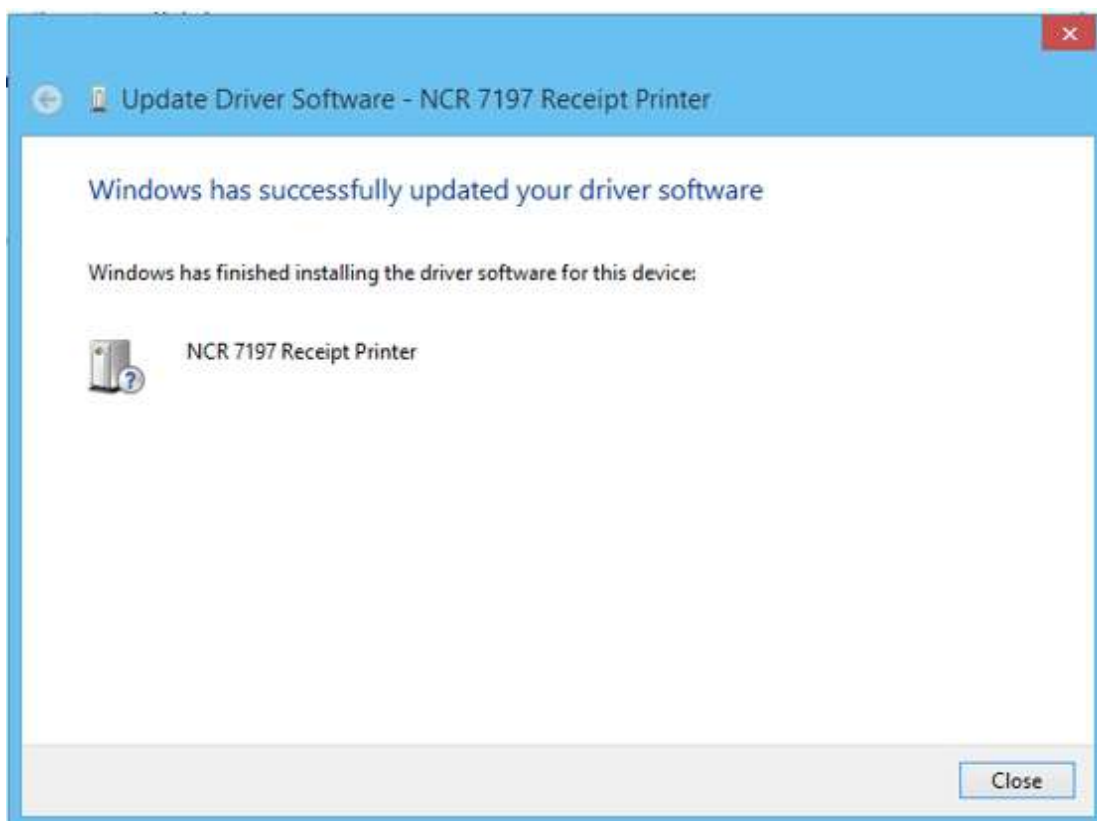

6. Select **Next**.

The system starts installing the USB Virtual COM port driver for printers.

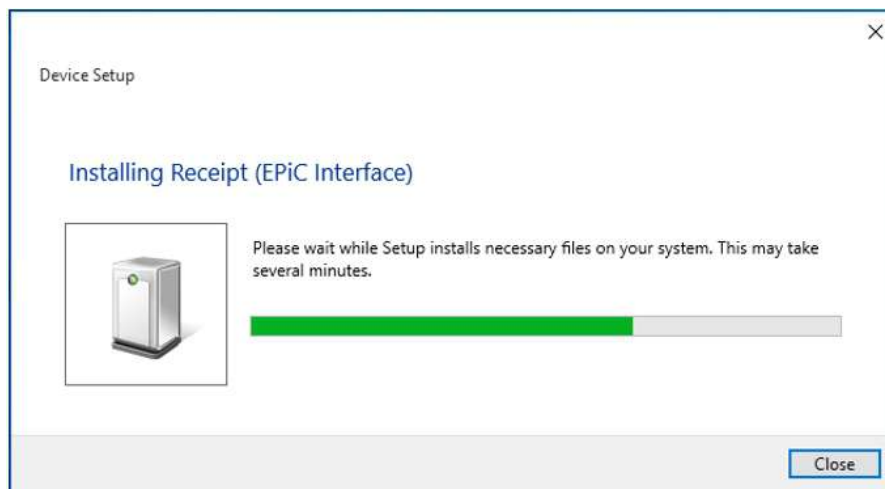

When the installation is complete, the following window is displayed.

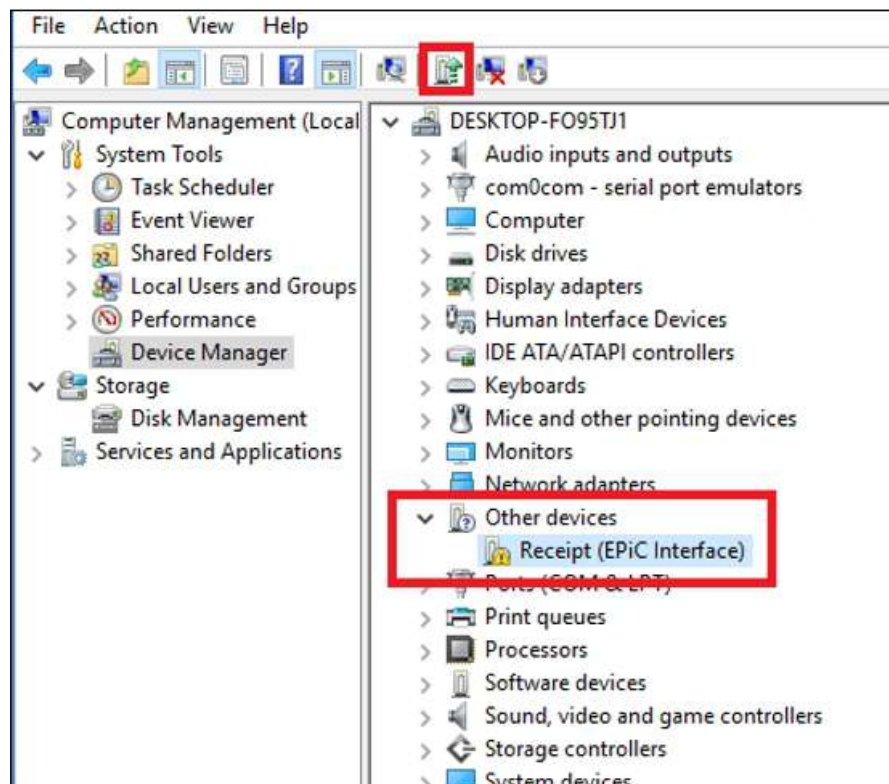

## Windows 10

To install the USB Virtual COM Port Driver for Printer on a Windows 8 system, follow these steps:

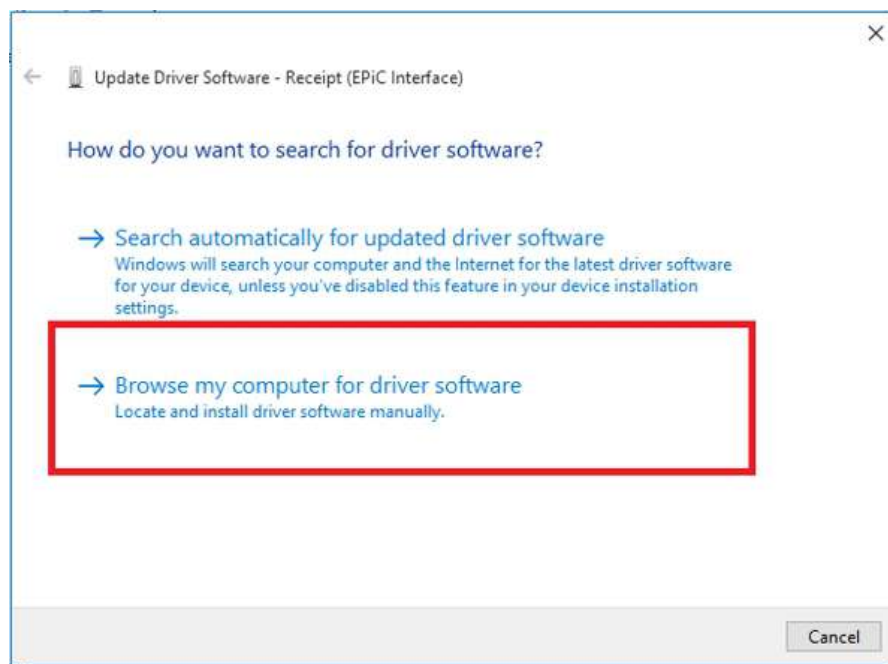

1. The printer beeps when it is plugged in to show the USB device is recognized. The Device Setup window displays that the Installing Receipt (EPiC Interface) process is ongoing.

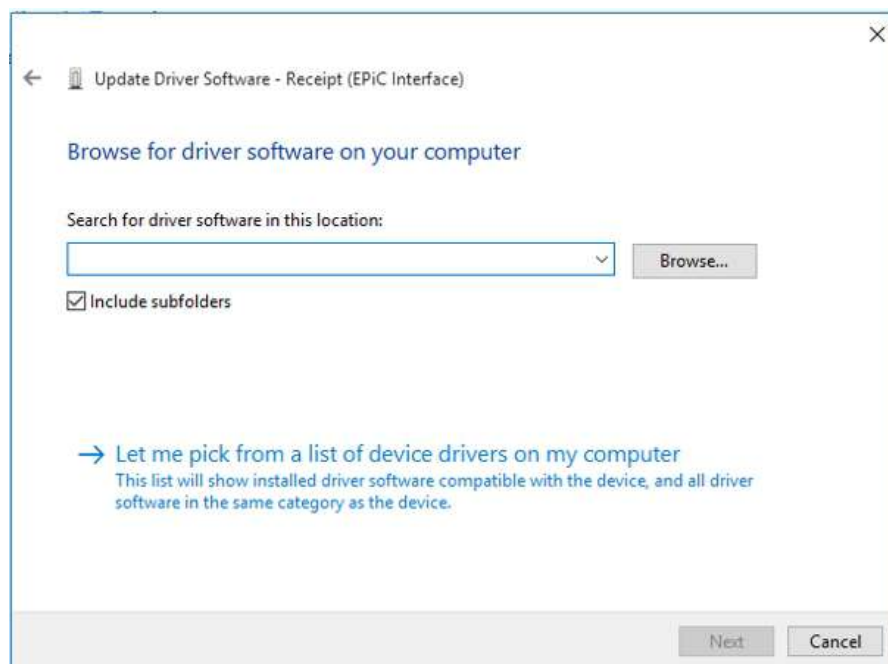

2. Open the Device Manager, and then select **Receipt (EPiC interface)**.
3. Select the **Update Driver Software** button.

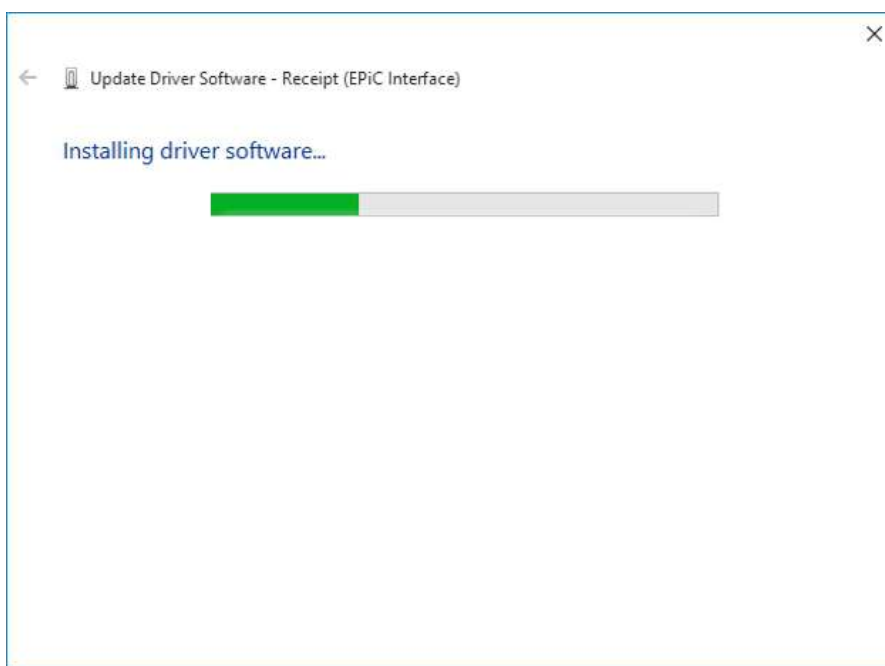

4. Select **Browse my computer for driver software**.

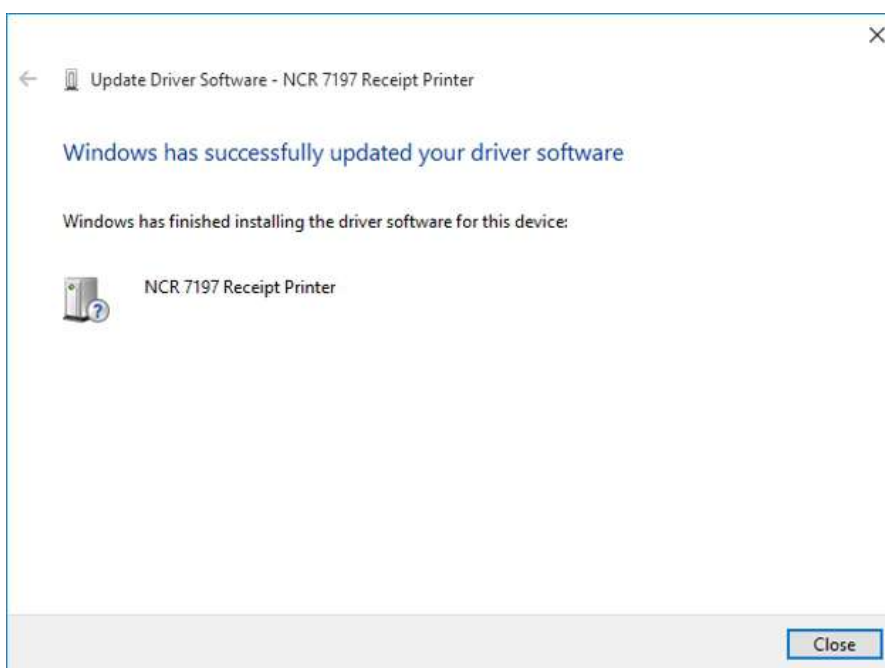

5. Select **Browse**, and then select the **Edgeport Driver** folder.
6. Select **Next**.

The system starts installing the printer driver.

When the installation is complete, the following window is displayed.

## Verifying the Installation

You need to verify that the device drivers were installed correctly.

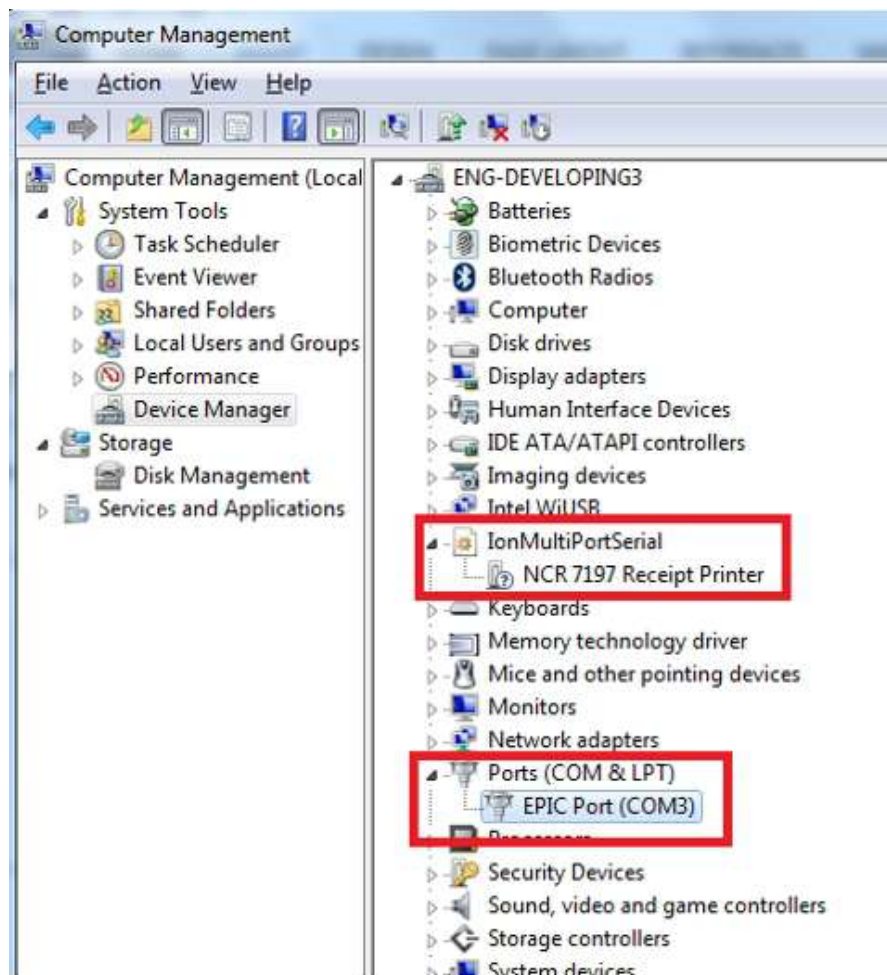

### Windows POS Ready 7

To verify the installation of the driver on a Windows POS Ready 7 system, follow these steps:

1. Open the Device Manager window.
2. Make sure that the NCR 7197 Receipt Printer and the EPIC Port are installed.

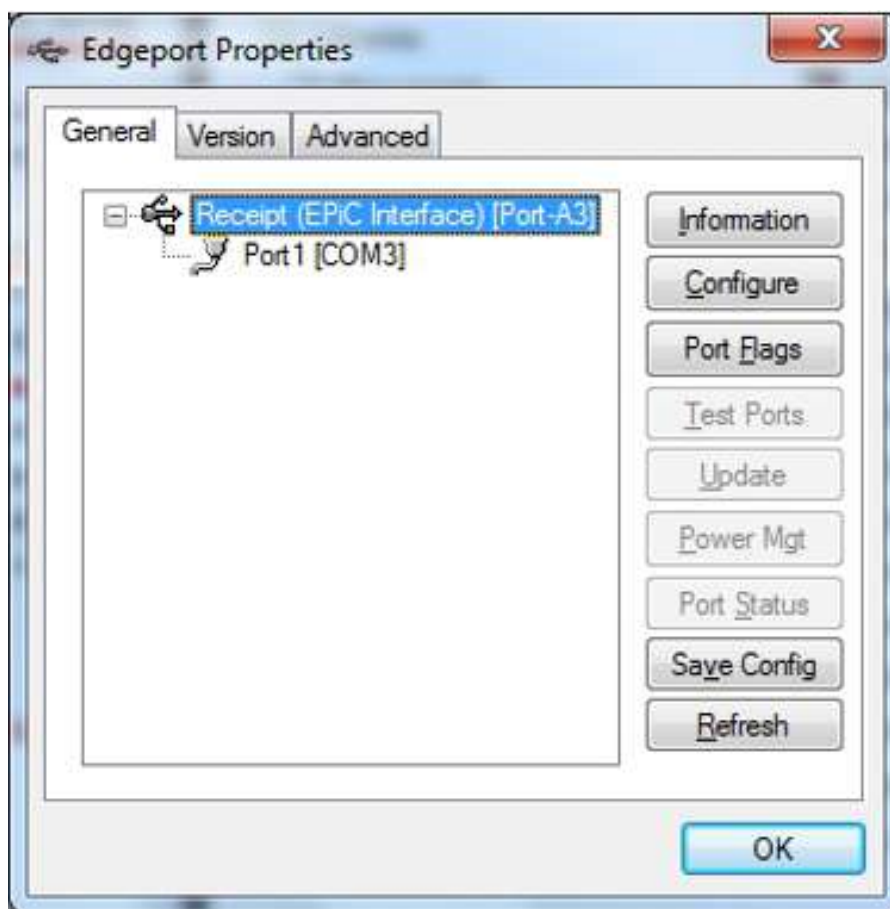

**Note:** The NCR 7197 Receipt Printer is the defined USB VID/PID (Vendor ID/Product ID) of the NCR Single Station printers (7197, 7198, and 7199).

**Note:** If this information is not listed, then the installation was not successful. You need to reinstall the drivers.

3. Open the Edgeport utility and make sure the Port is assigned.

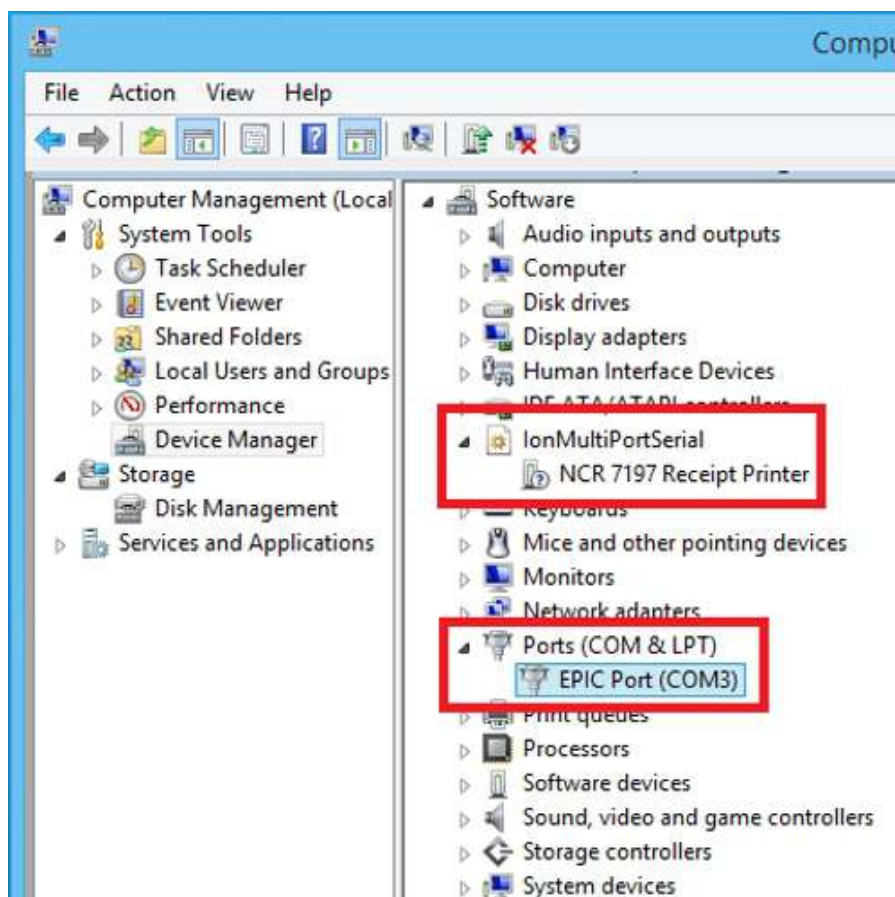

## Windows 8

To verify the installation of the driver on a Windows 8 system, follow these steps:

1. Open the Device Manager window.
2. Make sure that the **NCR 7197 Receipt Printer** and the **EPIC Port** are installed.

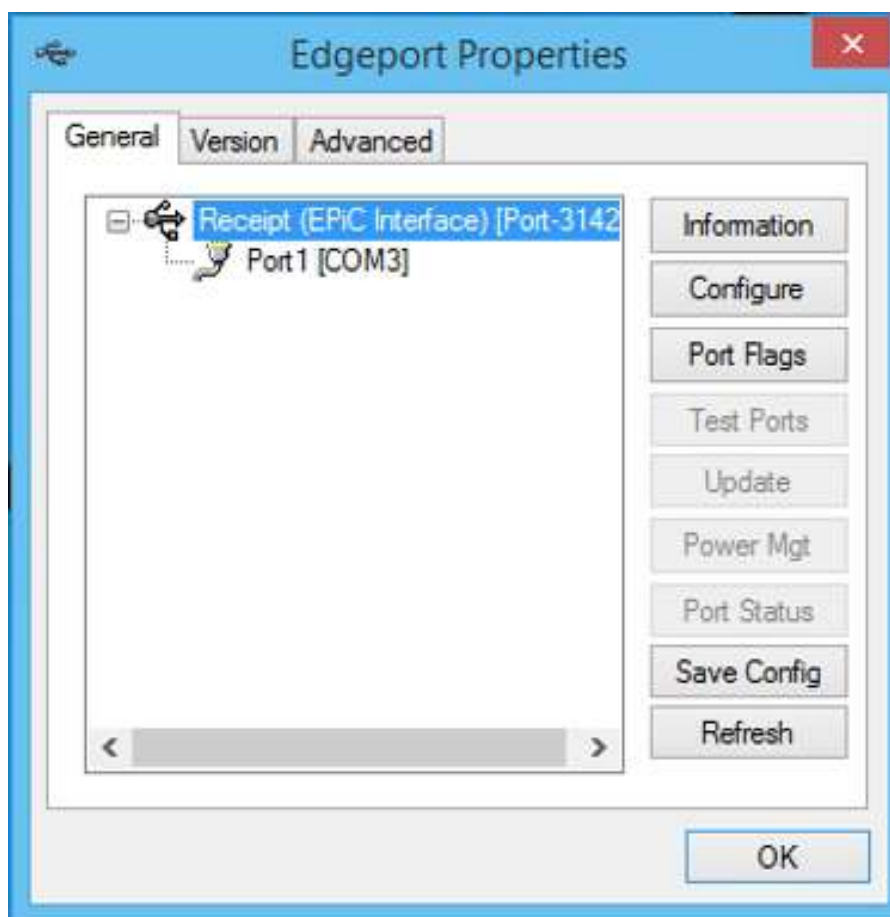

**Note:** The **NCR 7197 Receipt Printer** is the defined USB VID/PID (Vendor ID/Product ID) of the NCR Single Station printers (7197, 7198, and 7199).

**Note:** If this information is not listed, then the installation was not successful. You need to reinstall the drivers.

3. Open the Edgeport utility and make sure the Port is assigned.

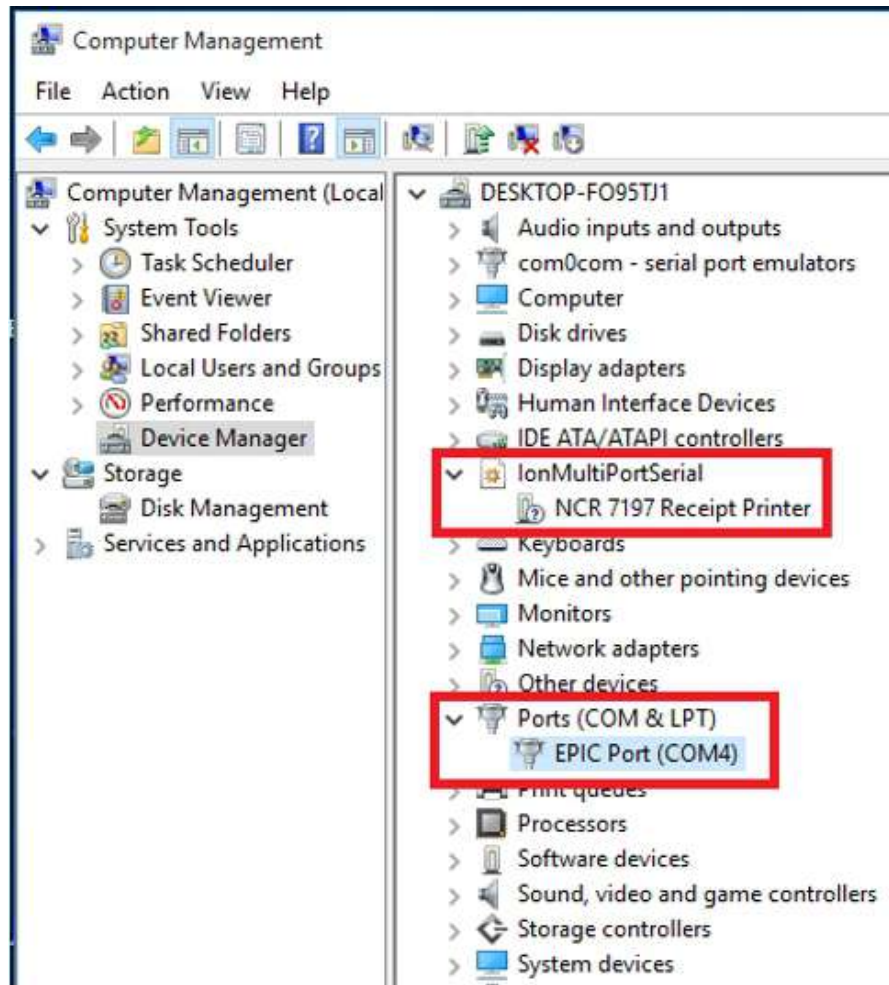

## Windows 10

To verify the installation of the driver on a Windows 10 system, follow these steps:

1. Open the Device Manager window.
2. Make sure that the **NCR 7197 Receipt Printer** and the **EPIC Port** are installed.

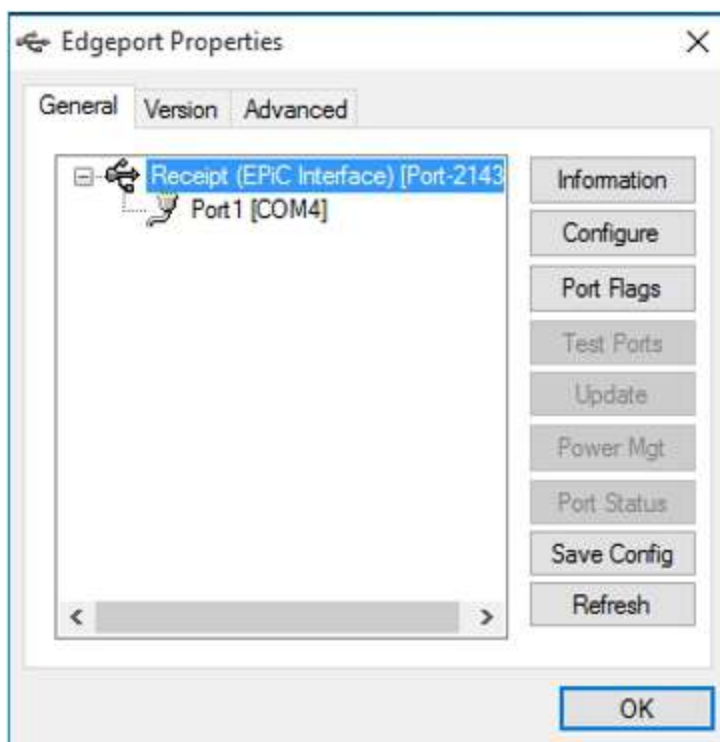

**Note:** The **NCR 7197 Receipt Printer** is the defined USB VID/PID (Vendor ID/Product ID) of the NCR Single Station printers (7197, 7198, and 7199).

**Note:** If this information is not listed, then the installation was not successful. You need to reinstall the drivers.

3. Open the Edgeport utility and make sure the Port is assigned.

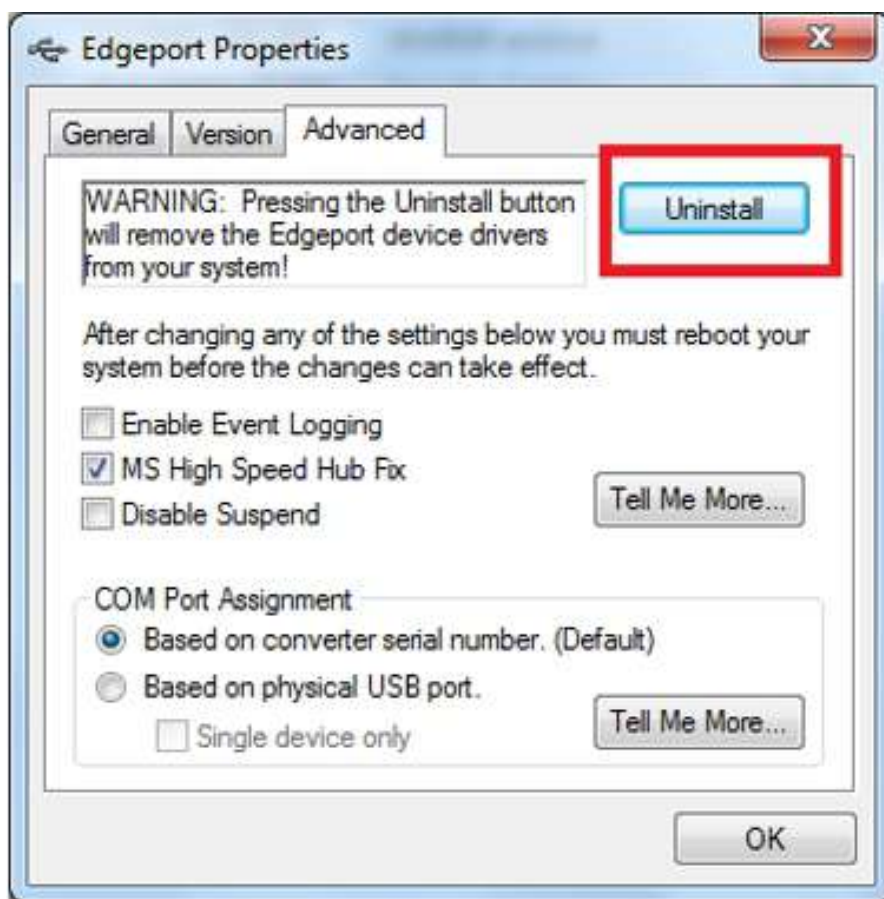

## Uninstalling the Drivers

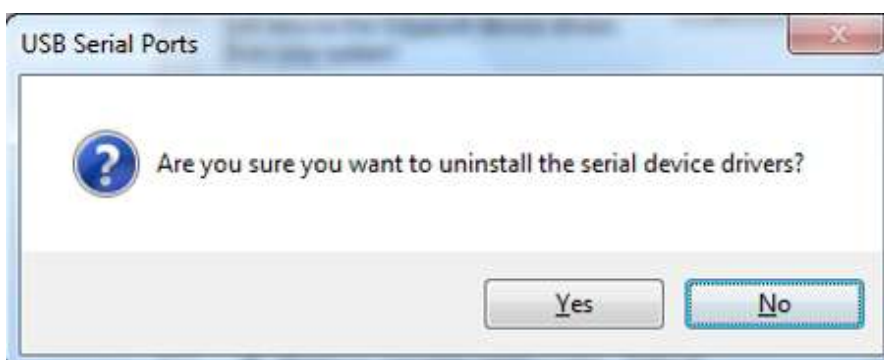

### Windows POS Ready 7

To uninstall the printer driver on a Windows POS Ready 7 system, follow these steps:

1. Open the Edgeport utility.
2. Select the **Advanced** tab.
3. Select the **Uninstall** button, and then follow the on-screen instructions.

The following window is displayed.

4. Select **Yes**.

The system uninstalls the driver, and then displays the following window.

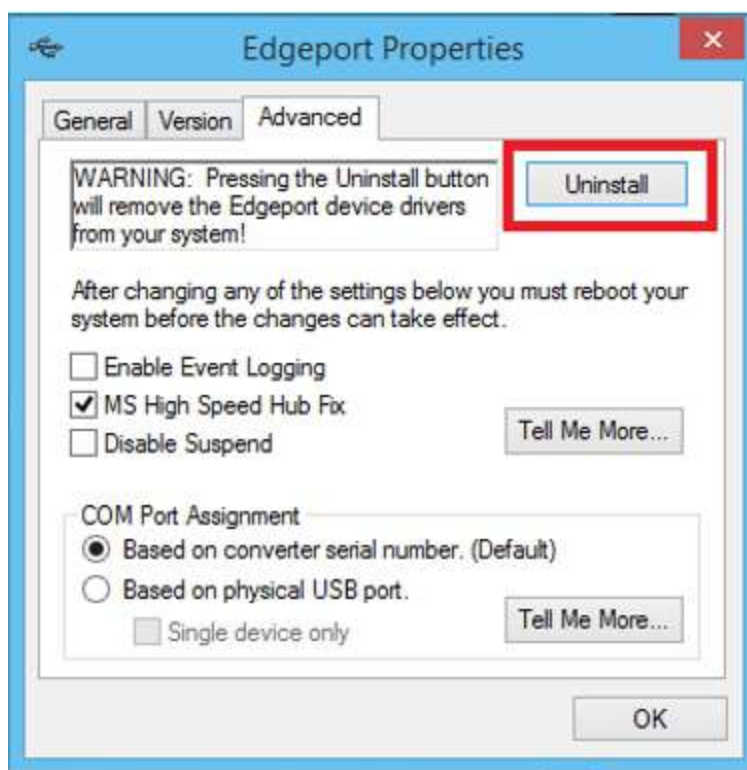

5. Select **Yes** to completely uninstall the driver and to restart the PC.

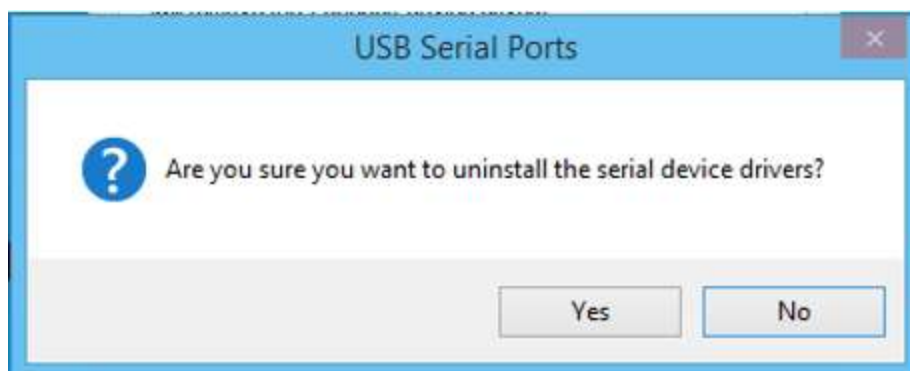

## Windows 8

To uninstall the printer driver on a Windows 8 system, follow these steps:

1. Open the Edgeport utility.
2. Select the **Advanced** tab.
3. Select the **Uninstall** button, and then follow the on-screen instructions.

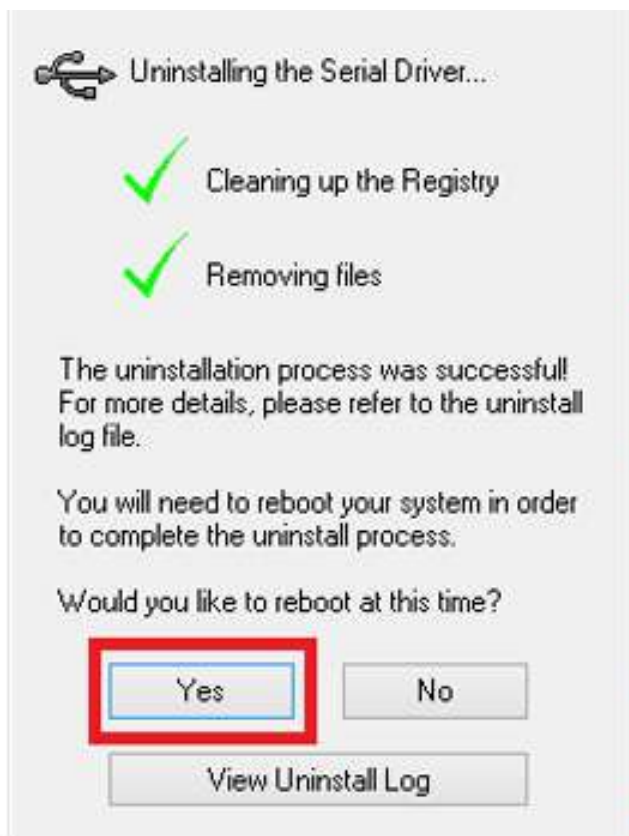

The following window is displayed.

4. Select **Yes**.

The system uninstalls the driver, and then displays the following window.

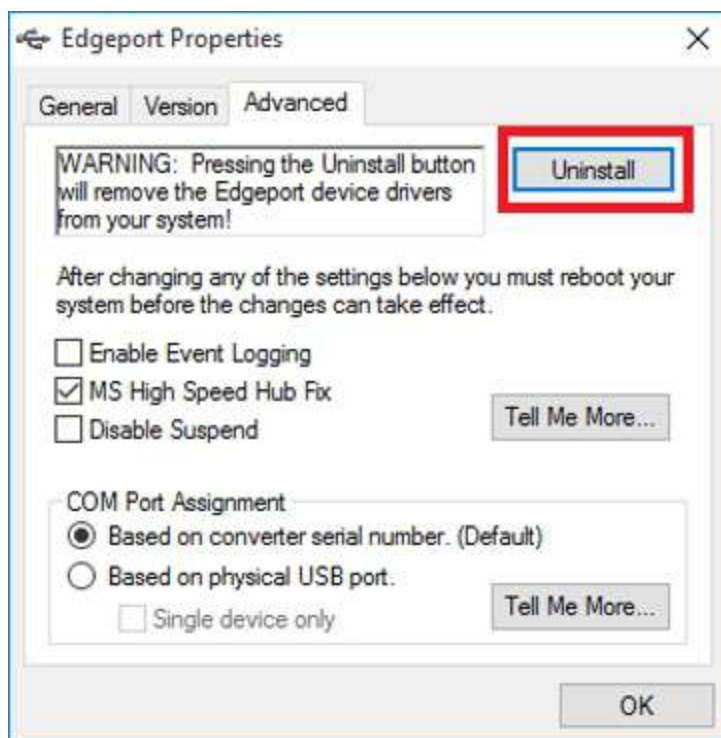

5. Select **Yes** to completely uninstall the driver and to restart the PC.

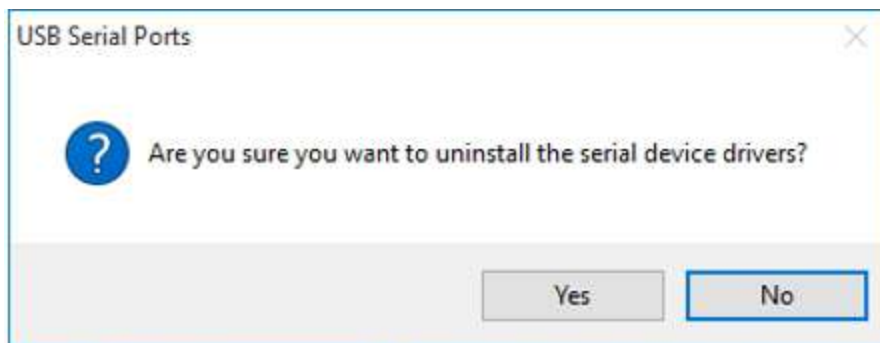

## Windows 10

To uninstall the printer driver on a Windows 8 system, follow these steps:

1. Open the Edgeport utility.
2. Select the **Advanced** tab.
3. Select the **Uninstall** button, and then follow the on-screen instructions.

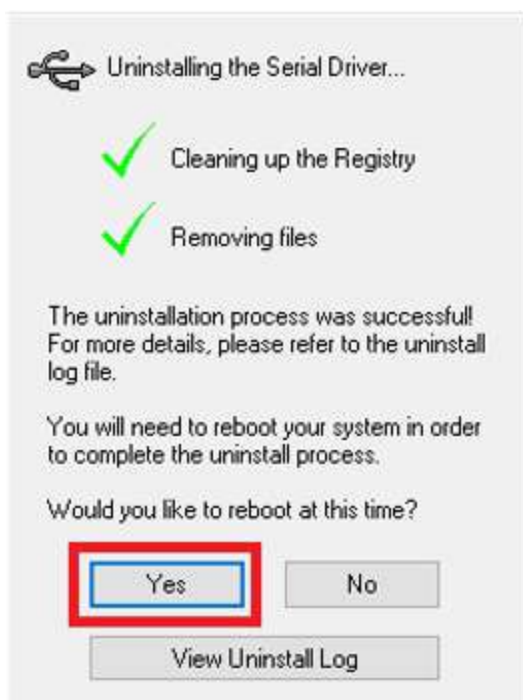

The following window is displayed.

4. Select **Yes**.

The system uninstalls the driver, and then displays the following window.

5. Select **Yes** to completely uninstall the driver and to restart the PC.

# Configuring Serial Port Number Assignments

This section describes how the NCR USB solution assigns serial port numbers (for example, COMx) to the printer. The information that determines the assigned port number is stored in the host computer and not in the printer. This assignment is made in one of three ways. The first method is the default method that automatically assigns a serial port number to the printer. The other two methods require the user to specify a port number. These methods are described more fully in the following section.

## Serial Port Configuration Methods

### Automatic (Default)

When the printer is plugged into the USB port of the host and the drivers are loaded, the printer will default to the next available serial port number. In many cases, this is exactly what is desired. You can check the assigned serial port by clicking the General tab in the Edgeport utility. You'll see an entry for the NCR printer. Expand the list to see which serial port has been assigned to the printer.

### Assigning a serial port to the printer

If the default assignment does not meet the requirements of the installation, you can assign a different serial port to the printer. From the General tab of the Edgeport utility, select the printer and press Configure. Follow the directions on the resulting form to assign a new port to the printer.

# Communication Interface Modes

The Configuration Menu gives the user the option of setting the printer to use a USB communication.

## RS-232C Interface Settings [Standard Model]

If the user sets the printer to use an RS-232C serial interface, the Configuration Menu can be used to set the following RS-232C specific settings:

- Set a baud rate 115200, 57600, 38400, 19200, 9600 baud
- Set the number of data bits to seven or eight
- Set the number of stop bits to one or two
- Enable or disable parity
- Set the printer to ignore data errors or print a “?” upon encountering an error

The settings used will depend on the software the operator is using and the capabilities of the host computer.

Press the Paper Feed button for the communications settings you want.

Defaults are marked with asterisks (\*).

### **\*\* Interface RS232C**

```
Baud Rate          -> 1 Click
Data Bits           -> 2 Clicks
Stop Bits           -> 3 Clicks
Parity              -> 4 Clicks
Flow Control        -> 5 Clicks
Reception Errors    -> 6 Clicks
DSR Signal          -> 7 Clicks
Enter code, then hold Button DOWN.
At least 1 second to validate.
```

### **\*\* BAUD RATE**

```
115200 Baud        -> 1 Click
57600 Baud          -> 2 Clicks
38400 Baud          -> 3 Clicks
19200 Baud*         -> 4 Clicks
9600 Baud           -> 5 Clicks
Enter code, then hold Button DOWN.
At least 1 second to validate.
```

**\*\* DATA BITS**

8 Data Bits\* -> 1 Click  
7 Data Bits -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

**\*\* STOP BITS**

1 Stop Bits\* -> 1 Click  
2 Stop Bits -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

**\*\* PARITY**

No Parity\* -> 1 Click  
Even Parity -> 2 Clicks  
Odd Parity -> 3 Clicks  
Enter code, then hold Button DOWN.

**\*\* RECEPTION ERRORS**

Ignore Errors -> 1 Click  
Print '?'\* -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

**\*\* DSR Signal**

Enable -> 1 Click  
Disable -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

## USB Interface Settings [Standard Model]

USB Interface setting can be changed by selecting USB Type in the Hardware menu.

**\*\* USB Type**

ION (EpiC) -> 1 Click  
NonION (NHPI) \* -> 2 Clicks  
NonION (PRTR) -> 3 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

## Ethernet Interface Settings [Option]

Press the Paper Feed button for the communications settings you want.

### **\*\* Interface Ethernet**

Ethernet RTC Protocol -> 1 Click  
DHCP -> 2 Clicks  
TCP max. connection -> 3 Clicks  
Physical LAN Speed -> 4 Clicks  
Link Down Timeout -> 5 Clicks  
TCP idle Timeout -> 6 Clicks  
SNMP Trap 1 -> 7 Clicks  
SNMP Trap 2 -> 8 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

### **\*\* ERTC Protocol**

TCP\* -> 1 Click  
UDP -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

### **\*\* DHCP**

Disable\* -> 1 Clicks  
Enable -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

### **\*\* TCP max. connection**

1 client\* -> 1 Click  
2 clients -> 2 Clicks  
3 clients -> 3 Clicks  
4 clients -> 4 Clicks  
5 clients -> 5 Clicks  
6 clients -> 6 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

**\*\* Physical LAN Speed**

Auto\* -> 1 Clicks

100 Mbps Full -> 2 Clicks

100 Mbps Half -> 3 Clicks

10 Mbps Full -> 4 Clicks

10 Mbps Half -> 5 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

**\*\*Link Down Timeout**

No Time Out -> 1 Click

1 min - 10 min -> 2 Clicks

11 min - 20 min -> 3 Clicks

21 min - 30 min -> 4 Clicks

31 min - 40 min -> 5 Clicks

41 min - 50 min -> 6 Clicks

51 min - 60 min -> 7 Clicks

61 min - 70 min -> 8 Clicks

71 min - 80 min -> 9 Clicks

81 min - 90 min -> 10 Clicks

91 min - 100 min -> 11 Clicks

101 min - 110 min -> 12 Clicks

111 min - 120 min -> 13 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

**\*\*TCP idle Timeout**

No Time Out -> 1 Click

1 min - 10 min -> 2 Clicks

11 min - 20 min -> 3 Clicks

21 min - 30 min -> 4 Clicks

31 min - 40 min -> 5 Clicks

41 min - 50 min -> 6 Clicks

51 min - 60 min -> 7 Clicks

61 min - 70 min -> 8 Clicks

71 min - 80 min -> 9 Clicks

81 min - 90 min -> 10 Clicks

91 min - 100 min -> 11 Clicks

101 min - 110 min -> 12 Clicks

111 min - 120 min -> 13 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

**\*\* SNMP Trap 1**

Disable\* -> 1 Click

Enable -> 2 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

**Save Parameters**

This function allows to save the selected communication settings or return to the communication settings to select additional options.

Press the Paper Feed button for the option you want.

**Save new parameters?**

YES -> Long Click

NO, MODIFY -> Short Click

**Emulation/Software Options****Receipt Synchronization**

This function makes it possible for the user to select whether to enable or to disable receipt synchronization printing.

When "Receipt synchronization" is enabled (Mode1 or Mode2), printer returns the status for buffered status command after confirming the start of printing.

The following commands are the buffered status command.

1B 75 0 Transmit Peripheral Device Status

1B 76 Transmit Printer Status

1D 49 n Transmit Printer ID

1D 72 n Transmit Status

Regarding Mode1 and Mode2, the command/status sequence is completely the same.

The only difference is the printing speed. The printing speed of Mode1 is the same as in normal printing (max. 12ips).

Whereas, the printing speed of Mode2 is 4ips (max) in order to prevent the clatter print in the synchronized line mode.

When Mode3 is selected, the following command will be available.

1F 0A n Get Print Completion

When "Receipt synchronization" is disabled, printer returns the status for buffered status command immediately after decoding the status command.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the receipt synchronization option you want.

**\*\*\*\*\*Receipt Sync\*\*\*\*\***

Sync.Mode       -> 1 Click  
Disabled\*       -> 2 Clicks  
Sync.Mode 1   -> 3 Clicks  
Sync.Mode 3   -> 4Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

## Save Parameters

This function allows to save the selected communication settings or to return to the communication settings to select additional options.

Press the Paper Feed button for the option you want.

**Save new parameters?**

YES               -> Long Click  
NO, MODIFY       -> Short Click

## Default Lines per Inch

This function allows the user to set the default lines per inch printed by the thermal printer to 6, 7.52, or 8.13.

Press the Paper Feed button for the lines per inch you want.

**\*\*\*\*\*Default LPI\*\*\*\*\***

8.13 Lines per Inch   -> 1 Click  
7.52 Lines per Inch\*  -> 2 Clicks  
6 Lines per Inch       -> 3 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

**Save new parameters?**

YES               -> Long Click  
NO, MODIFY       -> Short Click

## Carriage Return Usage

This function allows the printer to ignore or use the Carriage Return (hexadecimal 0D) command depending on the application. Some applications expect the command to be ignored while others use the command as a print command.

Press the Paper Feed button for the carriage return usage you want.

### \*\*\*\*\*Carriage\*\*\*\*\*

Ignore CR                      -> 1 Click  
Use CR as Print Cmd\*        -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

### Save new parameters?

YES                      -> Long Click  
NO, MODIFY        -> Short Click

## Asian Mode

This function makes it possible for the user to select an Asian character for the printer.

Press the Paper Feed button for the Asian mode you want.

### \*\*\*\*\*ASIAN MODE\*\*\*\*\*

Asian Mode 932 On    -> 1 Click  
Asian Mode Off\*      -> 2 Clicks  
Asian Mode 936 On    -> 3 Clicks  
Asian Mode 949 On    -> 4 Clicks  
Asian Mode 950 On    -> 5 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

### Save new parameters?

YES                      -> Long Click  
NO, MODIFY        -> Short Click

## Set Font Type option

Set Font Type using the Emulation sub-menu.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the option you want to choose.

\*\*\*\*\*SPECIALFONT\*\*\*\*\*

Original Font \*                   -> 1 Click  
Mode 1 CP473/856 Large       -> 2 Clicks  
Mode 2 866 Mini               -> 3 Clicks  
Mode 3 Constructed 874       -> 4 Clicks  
Mode 4 Contextual 1256       -> 5 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

**Save new parameters?**

YES                   -> Long Click  
NO, MODIFY       -> Short Click

## Set Compress Pitch option

Set Compress Pitch command using the configuration menu.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

\*\*\*\*\* COMPRESS PITCH FONT\*\*\*\*\*

Valid                   -> 1 Click  
Invalid\*               -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

**Save new parameters?**

YES                   -> Long Click  
NO, MODIFY       -> Short Click

## Set 48 CHARACTER MODE

This option is to set 48 Character printing. The selections are enable or disable. The end result is to print 48 characters in one line.

\*\*\*\*\*48 Character Print\*\*\*\*\*

Disable\* -> 1 Click

Enable -> 2 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

**Save new parameters?**

YES -> Long Click

NO, MODIFY -> Short Click

## Set PDF417 MAX COLUMN PRINT?

This function makes it possible for the user to select the print columns for the PDF417 bar code printing. The selections are 9 or 14 columns. The end result is the height of the bar code printing. The default setting is 9 columns.

RS485 doesn't support this function.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the PDF417 max column you want.

\*\*\*\*\*PDF417 MAX COLUMNS\*\*\*\*\*

9 Columns -> 1 Click

14 Columns -> 2 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

**Save new parameters?**

YES -> Long Click

NO, MODIFY -> Short Click

## Set Auto Reset option

Set Auto Reset using the configuration menu. Answer No to the questions printed on the receipt until you come to the instructions for Auto Reset.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the platen waiting time you want.

### **\*\* SET AUTO RESET \*\*\*\*\***

Disable\* -> 1 Click  
10 Sec -> 2 Clicks  
20 Sec -> 3 Clicks  
30 Sec -> 4 Clicks  
40 Sec -> 5 Clicks  
50 Sec -> 6 Clicks  
60 Sec -> 7 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

### **Save new parameters?**

YES -> Long Click  
NO, MODIFY -> Short Click

## Set Compatibility Top Margin option

Set Compatibility Top Margin using the configuration menu. Answer No to the questions printed on the receipt until you come to the instructions for Compatibility Barcode Length.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the Compatibility Top Margin option.

### **\*\* \*\*\*\*\*Compatible Top margin\*\*\*\*\***

Disable -> 1 Click  
Enable\* -> 2 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

### **Save new parameters?**

YES -> Long Click  
NO, MODIFY -> Short Click

## Hardware Options

### Set USB Type

Set the USB type using the configuration menu. Select Hardware Options in the Configuration Menu.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the USB type you want.

\*\*\*\*\*USB Type\*\*\*\*\*

ION(Epic)           -> 1 Click  
NonION(NHPI) \*   -> 2 Clicks  
NonION(PRTR)      -> 3 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

Save new parameters?

YES               -> Long Click  
NO, MODIFY      -> Short Click

### Set USB Speed

Set the USB speed using the configuration menu. Select Hardware Options in the Configuration Menu.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the USB speed you want.

\*\*\*\*\*USB Speed\*\*\*\*\*

Full Speed\*      -> 1 Click  
High Speed       -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

Save new parameters?

YES               -> Long Click  
NO, MODIFY      -> Short Click

## Set Print mode

Set the Receipt Print Mode using the configuration menu. Select Hardware Options in the Configuration Menu.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the receipt print mode you want.

\*\*\*\*\*Print Mode\*\*\*\*\*

High Speed Print\*      -> 1 Click  
High Quality Print      -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

Save new parameters?

YES                      -> Long Click  
NO, MODIFY           -> Short Click

## Print Density

This function makes it possible to adjust the energy level of the print head to darken the printout. An adjustment should only be made when necessary. The factory setting is 100%.

**Warning:** Choose an energy level no higher than necessary to achieve a dark printout.

Failure to observe this rule may result in a printer service call or voiding of the printer warranty. Consult your NCR technical support specialist if you have any questions.

Press the Paper Feed button for the print density you want.

\*\*\*\*\* PRINT DENSITY\*\*\*\*\*

-11 ~ -15              -> 1 Click  
-6 ~ -10               -> 2 Clicks  
-1 ~ -5                -> 3 Clicks  
0\*                      -> 4 Clicks  
+1 ~ +5                -> 5 Clicks  
+6 ~ +10               -> 6 Clicks  
+11 ~ +15              -> 7 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

If 1 click was selected, it is printed as follows.

```
-11          -> 1 Click
-12          -> 2 Clicks
-13          -> 3 Clicks
-14          -> 4 Clicks
-15          -> 5 Clicks
Enter code, then hold Button DOWN.
At least 1 second to validate.
```

**Save new parameters?**

```
YES          -> Long Click
NO, MODIFY   -> Short Click
```

## Power Supply

This function allows the user to set the maximum power for the printer to the below modes available.

Press the Paper Feed button for the option you want.

```
Term Pwr-High*      -> 1 Click
NCR 75W Ext Pwr     -> 2 Clicks
Term Pwr-Low        -> 3 Clicks
NCR 60W Ext Pwr     -> 4 Clicks
Enter code, then hold Button DOWN.
At least 1 second to validate.
```

**Save new parameters?**

```
YES          -> Long Click
NO, MODIFY   -> Short Click
```

## Set Standby Mode

Enable or disable the Standby Mode using the configuration menu. If the standby mode is enabled, the printer shifts to the standby mode in order to save the power consumption in the idle mode when the printer is in the idle mode.

Printer will exit from standby mode to normal mode in below criteria:

- Printer receives any data
- Feed key is pressed
- Receipt cover is opened / closed

**Note:** Flip cover open/close will not affect the standby mode.

After power-on, it will go to standby mode if it does not receive any transaction data in 60 seconds.

After one transaction, it will go to standby mode if it does not receive any transaction data in 1 second.

In disable setting, the printer does not shift to the standby mode. During going back from the standby mode, the response of the printer will be slightly delayed compared to the normal mode response.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the Shift to Standby Mode you want.

**\*\* \*\*\*\*\*Standby Mode \*\*\*\*\***

Disable -> 1 Click

Enable\* -> 2 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

**Save new parameters?**

YES -> Long Click

NO, MODIFY -> Short Click

## Set Power Off Mode

Set the Shift Time to Power Off using the configuration menu. If the printer is in standby mode for the time that is defined by this setting, printer automatically power off. Once enter power off mode, all LED are turned off. If feed key is pressed, printer exit from power off mode and enter normal mode.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the Shift Time to Power Off you want.

### \*\*\*\*\* POWER OFF MODE\*\*\*\*\*

```
Disabled*           -> 1 Click
Enabled (60min)     -> 2 Clicks
Enabled (120min)    -> 3 Clicks
Enabled (180min)    -> 4 Clicks
Enabled (240min)    -> 5 Clicks
Enabled (300min)    -> 6 Clicks
Enter code, then hold Button DOWN.
At least 1 second to validate.
```

### Save new parameters?

```
YES                 -> Long Click
NO, MODIFY          -> Short Click
```

## Set Knife Option

Set the Knife option using the configuration menu. Answer No to the questions printed on the receipt until you come to the instructions for knife option.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the option you want.

### \*\*\*\*\* KNIFE \*\*\*\*\*

```
Enable Knife *           -> 1 Click
Disable Knife             -> 2 Clicks
Enable Knife with Buzzer (Low) -> 3 Clicks
Enable Knife with Buzzer (High) -> 4 Clicks
Enter code, then hold Button DOWN.
At least 1 second to validate.
```

**Save new parameters?**

YES                   -> Long Click  
NO, MODIFY       -> Short Click

## Paper Width

This function allows the user to set the default paper width for the receipt thermal printer to 58mm or 80mm wide.

Press the Paper Feed button for the paper width option you want.

**\*\*\*\*\*PAPER WIDTH \*\*\*\*\***

Paper Width = 80 mm\*   -> 1 Click  
Paper Width = 58 mm   -> 2 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

**Save new parameters?**

YES                   -> Long Click  
NO, MODIFY       -> Short Click

## Set Paper Low Detection

Paper Low Sensor makes it possible to enable or disable the paper low sensor for particular printer configurations.

Press the Paper Feed button for the option you want.

**\*\*\*\*\* PAPER LOW Detection\*\*\*\*\***

Enable (Remaining 40ft)\*       ->   1 Click  
Disable                           ->   2 Clicks  
Enable (Remaining 30ft)       ->   3 Clicks  
Enable (Remaining 20ft)\*       ->   4 Clicks  
Enable (Remaining 15ft)\*       ->   5 Clicks  
Enter code, then hold Button DOWN.  
At least 1 second to validate.

**Save new parameters?**

YES                   -> Long Click  
NO, MODIFY       -> Short Click

## Set Color Paper Option

This function allows the user to set the color paper option to Monochrome or Color Paper.

Press the Paper Feed button for the option you want.

**\*\*\*\*\* SET COLOR PAPER \*\*\*\*\***

Monochrome\* -> 1 Click

Color Paper -> 2 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

**Save new parameters?**

YES -> Long Click

NO, MODIFY -> Short Click

## Set Buzzer Tone

This function allows the user to set the Buzzer Tone to Low, Middle and High.

Press the Paper Feed button for the option you want.

**\*\*\*\*\* SET BUZZER TONE \*\*\*\*\***

Low\* -> 1 Click

Middle -> 2 Clicks

High -> 3 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

**Save new parameters?**

YES -> Long Click

NO, MODIFY -> Short Click

## Set Power LED Control

Set the power LED control using the configuration menu. Answer No to the questions printed on the receipt until you come to the instructions for power LED control.

**Caution:** Be extremely careful in changing any of the printer settings to avoid inadvertently changing other settings that might affect the performance of the printer.

Press the Paper Feed button for the Power LED Control you want.

\*\*\*\*\* LED CONTROL Mode\*\*\*\*\*

Auto Mode\*     -> 1 Click

User Mode       -> 2 Clicks

Enter code, then hold Button DOWN.

At least 1 second to validate.

**Save new parameters?**

YES             -> Long Click

NO, MODIFY     -> Short Click

## Default Code Page

This function makes it possible to select the default code page.

These are the code pages available for printing:

- Code page 437 (US English)
- Code page 850 (Multilingual)
- Code page 852 (Slavic)
- Code page 858 (with Euro symbol)
- Code page 860 (Portuguese)
- Code page 862 (Hebrew)
- Code page 863 (French Canadian)
- Code page 864 (Arabic)
- Code page 865 (Nordic)
- Code page 866 (Cyrillic)
- Code page 874 (Thai)
- Code page 1252 (Windows Latin #1)
- Code page 1256 (Windows Arabic)
- Code page Katakana
- Hungary
- Code page 932 (MS Japan)
- Space page

For Asian code pages, code page 936, 949 or 950 replaces code page 932 in the above shown menu. Only one Asian code page (either 932, 936, 949 or 950) will exist in the firmware.

To set the Code Page, emulation mode should be selected:

1. To enter into emulation mode from the main menu, press the Paper Feed button twice as short click and hold the button until a beep sound is generated.

The following submenu will be displayed.

```
*****EMULATION*****
Receipt sync          -> 1 Click
Default LPI           -> 2 Clicks
Carriage              -> 3 Clicks
Asian mode            -> 4 Clicks
Code Page             -> 5 Clicks
Special Font          -> 6 Clicks
Compress Pitch Font   -> 7 Clicks
48 Character Mode     -> 8 Clicks
PDF417 Max Columns    -> 9 Clicks
Auto Reset            -> 10 Clicks
Compatible Top Margin -> 11 Clicks
```

2. To set code page, press feed key 5 times as short click and hold the feed key until the beep sound is generated.

The following sub-menu will be displayed.

```
**CODE PAGE MENU
Code Page 437*  -> 1 Click
Code Page 850   -> 2 Clicks
Code Page 852   -> 3 Clicks
Code Page 858   -> 4 Clicks
More Options    -> 5 Clicks
Enter code, then hold Button DOWN
At least 1 second to validate
```

If more Options is selected, following sub menu will be displayed:

```
Code Page 860    -> 1 Click
Code Page 862    -> 2 Clicks
Code Page 863    -> 3 Clicks
Code Page 864    -> 4 Clicks
More Options     -> 5 Clicks
Enter code, then hold Button DOWN
At least 1 second to validate
```

Code Page 865 -> 1 Click  
Code Page 866 -> 2 Clicks  
Code Page 874 -> 3 Clicks  
Code Page 1252 -> 4 Clicks  
More Options -> 5 Clicks  
Enter code, then hold Button DOWN  
At least 1 second to validate

Code Page 1256 -> 1 Click  
Code Page Katakana -> 2 Clicks  
Code Page Hungary -> 3 Clicks  
Code Page 932 -> 4 Clicks  
Enter code, then hold Button DOWN  
At least 1 second to validate

**Save new parameters?**

YES -> Long Click  
NO, MODIFY -> Short Click

## Runtime (Level 2) Diagnostics

Runtime diagnostics occur during normal printer operation. When the following conditions occur, the printer automatically turns off the appropriate motors and disables printing to prevent damage:

- Paper out
- Cover open
- Knife unable to home
- Print head too hot
- Power supply voltage out of range

The Printer Status (Green) LED signals when these conditions occur and indicates the state or mode of the printer.

The Printer Status LED has 3 colors: green, amber, and red.

LED indication for Printer Status LED is shown as below.

### Printer Status LED Error Blink Pattern

Basic policy of blinking pattern for errors at Printer Status LED in Auto Mode is as follows:

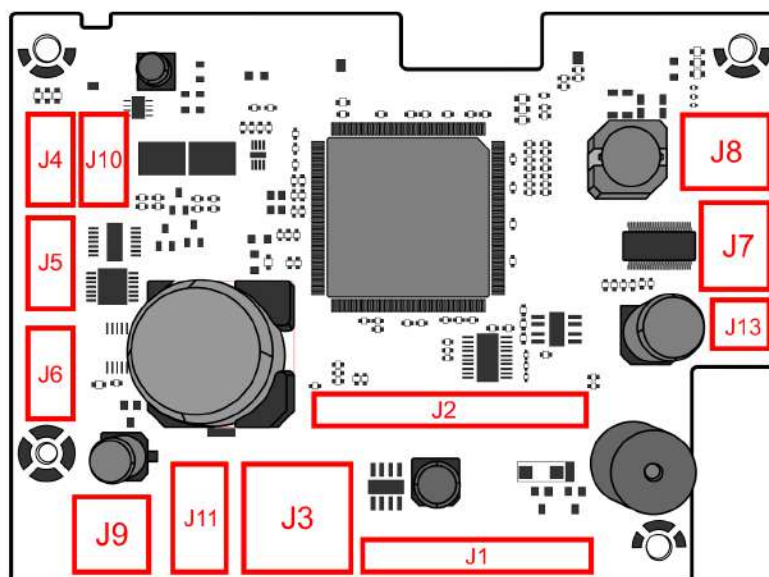

1. Red color is used for an unrecoverable error.
2. Amber color is used for a recoverable error.
3. Blink cycle is 2Hz.
4. Number of blink depends on the block where an error occurs.

•	PCB 1 Blink
•	Thermal Head 2 Blink
•	Cover 3 Blink
•	Paper block 4 Blink
•	Print block 5 Blink
•	Cutter block 6 Blink

In “User Mode” of Printer Status LED, a system controls LED by “LED Control Request”, LED pattern and the indication timing are specified by a system.

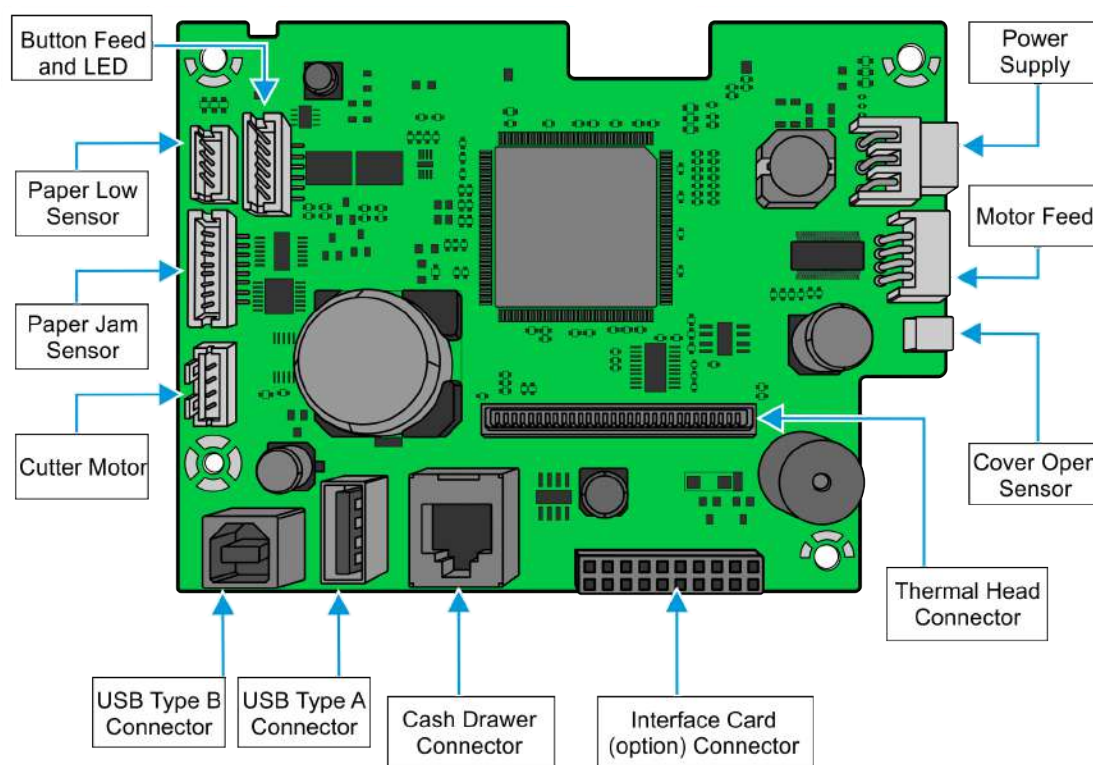

Errors	COLOR	Bezel LED
Memory Error	RED	1 Blink Pause 5 seconds
Thermal Head Disconnected	RED	2 Blink Pause 5 seconds
Thermal Head Abnormal Temperature	RED	2 Blink Pause 5 seconds
Cover Open	AMBER	3 Blink Pause 5 seconds
Paper End	AMBER	4 Blink Pause 5 seconds
Printer Jam	AMBER	5 Blink Pause 5 seconds
Cutter Error	AMBER	6 Blink Pause 5 seconds
Thermal head over heat	AMBER	2 Blink Pause 5 seconds

## PC Board Connector Locations and Designations

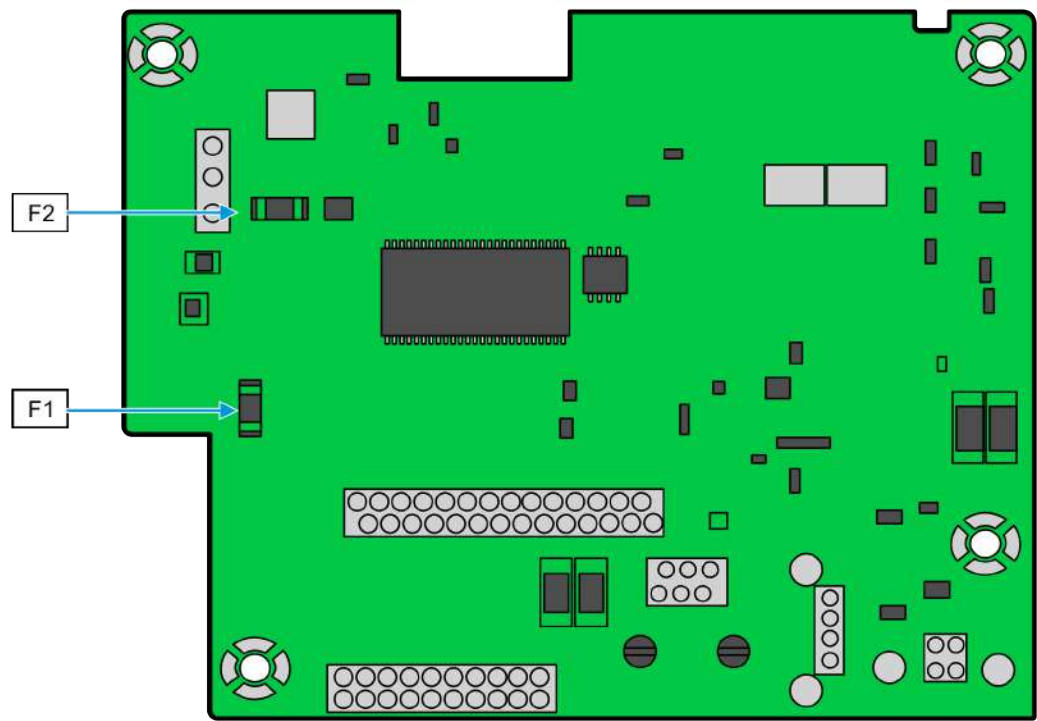

CCP-71039

### Driver Board

CCP-71040

# Fuse Location and Information

CCP-71541

Refer to the following table for more information:

Location	Part Description	Specifications
F1	25H3000G (skygate) or equivalent	125V / 3A
F2	25H5000G (skygate) or equivalent	125V / 5A

---

## Chapter 4: Communication

---

### Communication Overview

In order for a receipt to be printed, a program must be in place that translates the data from the host computer into a language that the printer can understand. This program must tell the printer exactly how to print each character. This chapter describes how to create such a program or modify an existing one.

### Interface

For the printer to communicate with the host, a communication link must be set up. The 7199 Model supports the industry standard USB communication interface. This interface has a protocol associated with it that the host computer must understand and adhere. The printer also supports RS-232C communications.

Only when the interface parameters are matched and the proper protocol is used will the host and the printer be able to communicate.

The 7199 Ethernet Model supports the Ethernet communication interface.

### Sending Commands

Once the communication link is established, commands can be sent to the printer. This section describes how to send commands to the printer using DOS and BASIC. This section does not take into account the necessary protocol, but is meant as a general introduction to how the printer functions.

#### Using BASIC to Send Commands

In BASIC, printer commands are sent as a string of characters preceded by the LPRINT command.

**Example:** `LPRINT CHR$( &H0A)`

This sends the hexadecimal number 0A to the printer, which causes the printer to print the contents of its print buffer. Previously sent commands tell the printer exactly how this data should appear on the paper.

**Example:** `LPRINT CHR$( &H12); "ABC"; CHR$( &H0A)`

This sends the Hex numbers 12 41 42 43 0A to the printer. This causes the printer to set itself to double wide mode (12), load the print buffer with "ABC" (41 42 43), and finally, print (0A). The communication link that the BASIC program outputs to must be matched to that of the printer.

## RS-232C Interface (Option)

The RS-232C version of the 7199 printer offers the standard options which are selectable in the Diagnostic mode. For more information, refer to [Communication Interface Modes](#) on page 70.

### Print Speed and Timing

The fast speed of the printer requires the application to send data to the printer at least as fast as it is printed. This application must also allow receipt lines to be buffered ahead at the printer, so the printer can print each line immediately after the preceding line, without stopping to wait for more data. Ideally, the application will send all the data for an entire receipt without pausing between characters or lines transmitted.

If the application sends data at 9600 baud and pauses between lines for as little as 50 milliseconds, the printer will never be able to print at full speed. But if the application sends data at 19.2 K baud and does not pause between lines, the printer will be able to print at its full speed of 1020 lines/minute.

The following table shows that with a pause of 50 milliseconds after each line, the transmit time equals or exceeds the print time, slowing down the printer, regardless of the baud rate.

Char./Line	Lines/Receipt	Transmit Time: (9600 Baud)	Transmit Time: (19.2 K Baud)	Print Time
20	20	1.4 seconds	1.2 seconds	0.2 seconds
20	40	2.8 seconds	2.4 seconds	0.4 seconds
44	20	1.88 seconds	1.44 seconds	0.2 seconds
44	40	3.76 seconds	2.88 seconds	0.4 seconds

The following table shows that with no delay between lines, the transmit time is much less than the print time, allowing the printer to print at full speed.

Char./Line	Lines/Receipt	Transmit Time: (9600 Baud)	Transmit Time: (19.2 K Baud)	Print Time
20	20	0.4 seconds	0.2 seconds	0.2 seconds
20	40	0.8 seconds	0.4 seconds	0.4 seconds
44	20	0.88 seconds	0.44 seconds	0.2 seconds
44	40	1.76 seconds	0.88 seconds	0.4 seconds

## RS-232C Technical Specifications

This section describes the pin settings for the connectors and the RS-232C interface parameters. The RS-232C parameters can be selected in the Diagnostic mode. The RS-232C parameters must match the host parameters.

## Setting Extra RS-232C Options

The following extra options are available for the RS-232C Interface:

- Data errors
- Print ? for data errors (default)
- Ignore data errors

## Ethernet Interface (Option)

The Ethernet interface uses either 10BASE-t, 100BASE-TX protocol. The Ethernet version of the 7199 printer offers the web configuration, which configure the Ethernet settings through a Web browser. For more information, refer to the [Communication Interface Modes](#) on page 70.

### Protocol

Application Layer	TCP Socket, UDP Socket, SNMP, DHCP, HTTP
Transport Layer	TCP, UDP
Network Layer	IP, ICMP, ARP
Data Link Layer	CSMA/CD
Physical Layer	10BASE-t, 100BASE-TX (IEEE802.3 Conforming) Auto negotiation 10/100Mbps Full/Half Duplex

### TCP Socket

It transfers printing commands and data, several status commands and those responses by direct socket communications.

Port number	9100 (Default)
Maximum simultaneous sessions	1
Maximum simultaneous connections	6
Time out	120 seconds (Default)

### UDP Socket

It transfers real time commands and those responses.

Port number	3000 (Default)
-------------	----------------

## SNMP

SNMP is used by the SNMP manager to acquire the printer information and status from SNMP agent (Printer).

SNMP version	SNMP v1 (RFC1157) compliant
Transport protocol	UDP/IP
MIB support	Part of MIB-II (RFC1213) Part of HOST Resource MIB Part of Printer MIB
PDU support	Get Request Get Next Request Get Response Trap
Port number of Server	161
Port number for Trap transmit	162

## DHCP

DHCP is used by the DHCP client (Printer) to acquire IP address, Subnet mask, and Gateway address from the DHCP server.

Transport protocol	UDP/IP
--------------------	--------

## HTTP

HTTP is used to configure the network setting by WEB Provision.

HTTP version	V1.1
Transport protocol	TCP/IP
Items to be able to configure	IP address Subnet mask Default Gateway DHCP DHCP address TCP max. connection Ethernet Physical LAN Speed LAN Real Time Command Protocol Link Down Timeout TCP idle Timeout TCP Port number UDP Port number SNMP Trap 1 SNMP Trap 2 SNMP Community (R/W) SNMP Trap 1 Community SNMP Trap 2 Community SNMP Trap 1 IP Address SNMP Trap 2 IP Address

## TCP Socket Communication

The communication procedure is designed as follows.

The TCP socket is used to send commands and data related to printing. And, it is also used to send and receive the batch status commands and its statuses.

When "Ethernet RTC Protocol" setting is TCP, it is used by sending and receiving of Real Time command,

1. Client PC connects to the TCP socket via the defined port number of the printer.
2. Client PC transmits the commands and the date of the printer.
3. When the printer receives the batch status command, the response is transmitted to client PC.

## UDP Socket Communication

The UDP socket is used by sending and receiving of Real Time Command.

This is effective in UDP port 3000 when "Ethernet RTC Protocol" setting is UDP.

1. Client PC connects to the UDP socket via the defined port number of the printer.
2. Client PC sends the status command and receives the status from the printer via UDP socket.

## Multiple Connection

It is possible to connect with multiple clients at the same time. However, more than 7 connections will be rejected.

# Connector

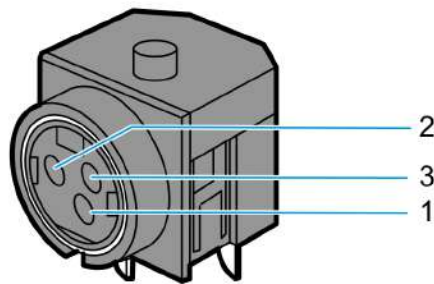

This section discusses the following NCR 7199 cable connectors:

- Power Cable Connector
- USB Cable Connector
- RS-232C Connector
- Ethernet Connector
- Cash Drawer Connector

## Power Cable Connector

The control cards received 24VDC  $\pm 10\%$  power via a 3-pin Mini-DIN plug, which mates with an integral shielded cable from the power supply unit.

The power connector is WIESON GA1009-3AT1N1 (or equivalent) with the following pin out:

1	+ 24VDC
2	Power Ground
3	NC
Shell	Frame Ground

CCP-71542

## USB Cable Connector

USB I/F is mounted on main card as default. There are 2 ports. The first port is for the HOST function with Type A connector, and the second port is for the Device function with Type B connector.

It does not support USB host port and device port at the same time.

### USB Version

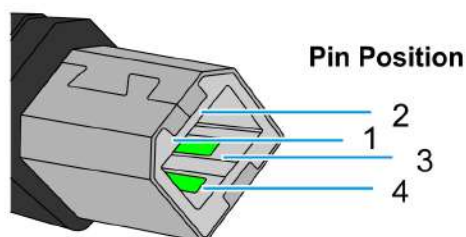

Version 2.0 High speed

### Connector Pin Assignment

The USB I/F connector is "B" Plug type for the Device function, and "A" plug type for the Host function.

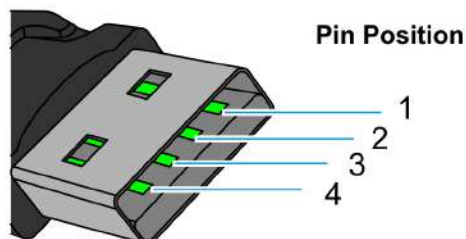

#### Type B connector

1	VBUS
2	D-
3	D+
4	GND
Shell	Shield

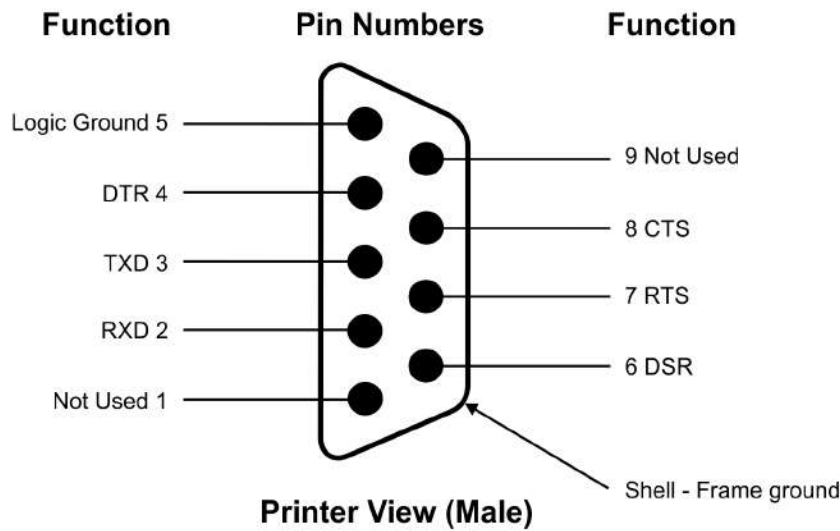

#### Type A connector

1	VBUS
2	D-
3	D+
4	GND
Shell	Shield

# RS-232C Communication Connector Pin Assignments

The serial I/F connector is 9pin D-SUB Male type connector with the following pin assignments:

# Ethernet Connector

The following specification is for the model equipped with Ethernet connection.

## Standard

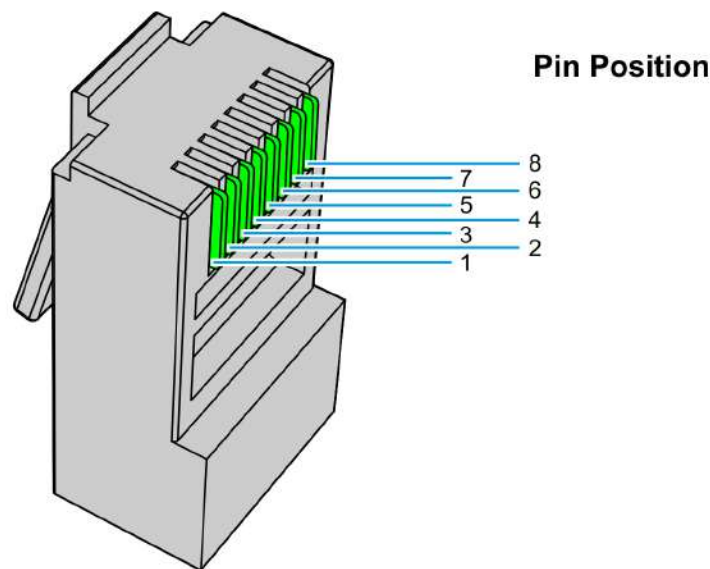

Fully integrated IEEE 802.3/802.3u-100 Base-TX/10 BASE-T Physical Layer

## Speed

Auto Negotiation: 10Mbps/100Mbps, Full/Half Duplex

## Connector Pin Assignment

The Ethernet I/F connector is an 8P8C modular connector (usually called RJ45) with the following pin assignments:

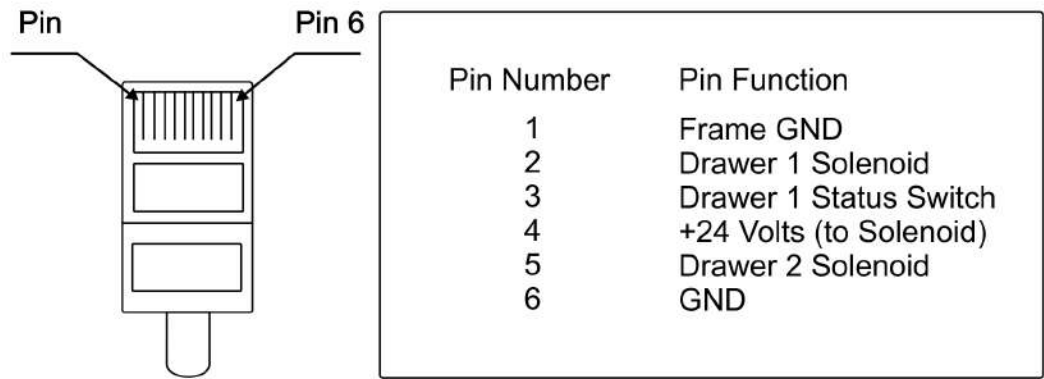

CCP-71038

Pin Position	Signal Description
1	TX+
2	TX-
3	RX+
6	RX-

# Cash Drawer Connector and Pin Assignments

The Cash drawer connector is located at the rear of the printer.

The Cash drawer connector is a 6-pin modular type connector with the following pin assignments:

---

## Chapter 5: Command

---

### Command Conventions

The different features and functions provided by the printer are controlled by sending commands from the host computer to the printer. This chapter describes the commands that are supported by the printer. The printer commands are made up of one or more bytes of data starting with a command control code followed by its supporting parameters.

Commands control all operations and functions of the printer, including the following:

- Drawing by text, image, bar-code, and so forth.
- Controlling knife cut, cash drawer, and so forth.
- Retrieving the printer status and information.
- Configuring the printer to customize.

Unless otherwise noted, any of the commands may be used in any combination to communicate with the printer from a program in a host computer.

To allow the graceful handling of commands that may be available in other printers but are not available in this printer, some commands will be listed and described but identified as "not implemented". If the printer receives one of these "not implemented" commands, the command and its supporting operands will be discarded. Any other data bytes, including unrecognized commands, are sent to the print buffer as data, and the printer will attempt to print the data when it is instructed to print the buffer.

For more information and for the list of commands, refer to the *NCR RealPOS 7199 Thermal Receipt Station Printer Programmer's Guide (BCC5-0000-5170)*.

---

## Chapter 6: Reflashing the Printer Firmware

---

### Flash Utility Information

The following instructions provide information on how to use the Flash Utilities provided for the NCR 7167 series, 7168 series, 7197 series, 7198 series, 740x-K59x series, 734X series, 7649-F301, and 7199 printers. These instructions cover the utilities provided for Windows GUI and Windows Command Line.

The following files comprise the utilities:

- `TseFlash.exe`—Windows GUI version of the Flash Utility
- `TseFlash.com`—Windows Command Line Flash Utility

### File Configurations

The following kinds of firmware loads can be sent to the printer:

- Boot Firmware
- Boot Firmware for Ethernet
- Main Firmware
- Single Byte Font
- Two Byte Receipt Font
- Two Byte Slip Font

The Single Byte Font file has a file extension of `.sfn`. It is the font used for OEM Codepages such as 437, 850, 858, and so forth, which require only a single byte of data to define the character to be printed. The Two Byte Font files (Separately Defined for Slip & Receipt) have a file extension `.dfn`. These are used to define the following Code Pages:

- 932 – Japanese
- 936 – Simplified Chinese
- 949 – Korean
- 950 – Traditional Chinese

It is very rare for the Single Byte Font to have to be updated. Since there is only enough memory in the printer for one of the Two Byte Fonts to be loaded at any time, the Two Byte Font will typically need to be loaded prior to installation in the appropriate country.

**Note:** The Font files, both Single and Two byte, should be loaded into the printer after the Boot and Main firmware have been loaded.

## Printer Languages Cross-Reference

Font Type	Print Station	File Name
ANK	Receipt	7199_SBCS_V2101.sfn*
Arabic Font	Receipt	
Japanese CP932	Receipt	7199_DBCS_V2201.sfn*
Korean CP949	Receipt	
Simple Chinese CP936	Receipt	
Traditional Chinese CP950	Receipt	

The following items need to be noted:

- The noted font files are included on LPIN A370-0050-0000 or are available from the NCR web site under Retail Solution Specific Printer Firmware.
- The asterisk (\*) denotes that the printer is preloaded with these fonts from the factory.
- When Asian fonts are to be used, select the appropriate Asian Code Page in the diagnostic set and also enable the Asian Mode.
- The above file names are latest as of 10<sup>th</sup> Jan 2017. Based on the new modification, the filenames may change.
- 7199\_SBCS\_V2101.sfn is inclusive of ANK and Arabic Font.
- 7199\_DBCS\_V2201.dfn is inclusive of Japanese CP932, Korean CP949, Simple Chinese CP936, and Traditional Chinese CP950.

## Windows Command Line Firmware Update Utility

The Windows Command Line version of the Flash Utility is provided to allow batch mode of operation in a Windows XP environment. If you issue a call to **TseFlash.com** with no parameter, you will get the following output that explains the parameters.

**Note:** This utility requires the **TseFlash.exe** to be in the same directory. **TseFlash.com** is just a shell that sends the command line options to **TseFlash.exe** to process.

```
*** TseFlash.com Ver 3.1 ***

```

form.

```

[status(opt)] --> Optional for Return Status (Optional Parameter):
/noretstat (default) Utility will not return status code.
/retstat   Utility will return status code.

```

[ErrorTimeout(opt)] --> Failsafe: Max Time Allowed for Called Exe (Optional Parameter):

```

(ONLY USED BY TseFlash.COM
/ErrorTimeout=xxx (minimum=420) xxx is number of
Seconds - limit 3600.
Information : Please use RS232 Interface, when switching
from ION <=> NON ION

```

If you fail to use the correct parameters, an error message will be displayed similar to the following error:

Error: Too few / many command line parameters!

The following is an example of a command line:

```

TseFlash.com /7197-5X01/6X01 /m /COM1 /115200 /none /1 SP2M0609.MFW
/noskip /print /retstat

```

This invokes the GUI interface shown in the next section and displays a progress bar indicator. The same is seen if you run the program through the GUI Windows GUI Printer Firmware Update Utility.

The printer firmware can be updated from the host terminal, a laptop, or a PC by running the `TSEFlash.exe` utility. The three file formats for the flash firmware are the following:

- IPL—Boot Firmware
- LAN—Boot Firmware for LAN
- MFW—Main Firmware

Examples of the firmware are the following:

- `7198RoL_V2001.ip1`—7198 RoL Printer Boot Firmware
- `7198RoL_V2001.lan`—7198 RoL Printer Boot Firmware for LAN
- `7198RoL_V5464.mfw`—7198 RoL Printer Main Firmware

**Note:** These are examples only. The firmware version varies based on the printer and as updates are provided.

To re-flash a firmware into the printer, unzip the flash utility and the flash files being used into a directory on the hard disk.

## Using TseFlash.exe Utility

On the host terminal or PC running Windows, execute the utility `TSEFlash.ex***` to start the program. A window similar to the example below will appear on the screen.

**Note:** The flash utility shown is for demonstration purposes only. Visit NCR Support Site for the latest release.

---

## Chapter 7: Configuration Network

---

### Overview

The printer provides the Ethernet Network Configuration page in a Web page (respondent HTTP/1.0 and 1.1)

The Configuration page can be accessed by connecting the Host PC to the printer via the network and inputting the printer's IP address in the Web browser address bar.

**Example:** `http://192.168.1.1/main.html` in the Web browser

The Host PC needs to be set with the correct network configuration (IP address, Subnet mask address, and so forth) to connect to the printer.

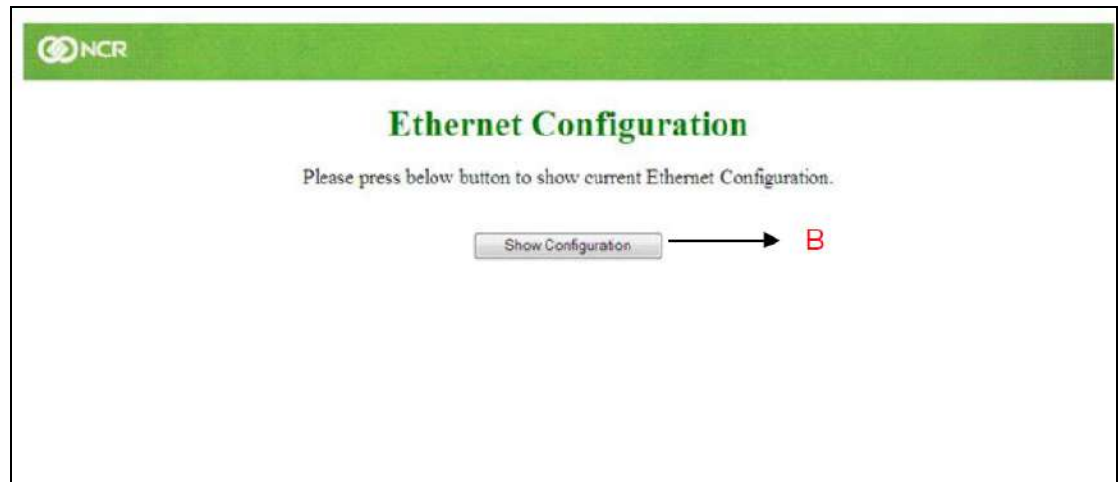

**Format:** `http ://(IP address for the printer)/`

## Display Format of Configuration Setting Page

This section discusses the display format of the Ethernet Network Configuration page.

### Top Page

On the Top page, the *Show Configuration* button is displayed. when it is selected, the Ethernet Configuration setting page is displayed with the current configuration.

## Ethernet Configuration Setting Page

On Ethernet Configuration setting page, users can view or change the Ethernet configuration.

To change the Ethernet configuration, do the following:

1. Change the values by doing any of the following:
  - Enter a value in the corresponding text box.
  - Select an option from the drop-down list.
2. Select **SAVE CONFIGURATION** to save the new Ethernet configuration in the printer ROM.

**Note:** If all values are valid and the saving process is successful, the *Save Configuration Message* is then displayed. If any value is invalid, the new Ethernet configuration is not saved and an error message is then displayed. To check and retry changing the values, select **Top Page**.

**Note:** To set the values to factory default, select **FACTORY DEFAULT**, and then select **SAVE CONFIGURATION**.

## Ethernet Configuration

Please set the configuration and press SAVE CONFIGURATION button.

FACTORY DEFAULT

→ Set default value

### TCP/IP - Configuration

## Save Configuration Message Page

On the Save Configuration Message page, users are informed that the new Ethernet configuration is successfully saved. To apply the new configuration to the printer, select **RESET PRINTER**.

## Error Message Page

On the Error Message page, users are informed that the new Ethernet configuration is not saved. Error details are also displayed. To check and retry changing values, select **Top Page**.

# TCP/IP Setting

This section discusses configuration parameters and default values for the TCP/IP setting.

## IP setting

[ IP ]					
IP Address	192	168	1	1	Value(0-255): Valid address
Subnet Mask	255	255	255	0	Value(0-255): Valid Mask
Default Gateway	0	0	0	0	Value(0-255): Valid address
DHCP	Enabled ▾				Select option
DHCP Request IP Address	0	0	0	0	Value(0-255): Valid address

Items	Default value	Detail
IP Address	192.168.1.1	Set Printer IP Address. This IP Address is effective when Get IP Address is Manual.
Subnet Mask	255.255.255.0	Set Printer Subnet Mask. This Subnet Mask Address is effective when Get IP Address is Manual.
Default Gateway	0.0.0.0	Set Printer Default Gateway. This Subnet Mask Address is effective when Get IP Address is Manual.
Get IP Address	Manual	<p>Select method of acquiring IP Address. Selectable method is Manual or DHCP base on the Printer Dip Switch Setting.</p> <p>If Printer Dip Switch 1 OFF and Dip Switch 2 OFF, Manual mode selected</p> <p>If Printer Dip Switch 1 ON and Dip Switch 2 ON, DHCP mode selected</p>
DHCP IP Address	0.0.0.0	Set requesting specific IP address to DHCP server. If set 0.0.0.0, DHCP sever allocates printer IP address automatically.

**Note:** IP addresses that cannot be set with Ethernet model printer are the following:

- 255.255.255.255 (Broad cast address)
- Local loopback address
  - 127.\*\*\*.\*\*\*.\*\*\*—this is the IP Address to send to oneself and \*\*\* is any value from 0 to 255.

## IP Address Automatic Acquisition

When "DHCP" is enabled, the printer automatically gets the IP address, the Subnet Mask and the Default Gateway from a DHCP server. If the printer fails to automatically get the IP address, it uses the same IP address as the Manual mode. The DHCP allocated IP address can be seen on the Diagnostics Form of the connected printer.

## TCP/UDP Setting

[ TCP/UDP ]		
Number of TCP Connections	1	Value(1-6)
Time of Time-out (for Link Down)	120	Value(1-120 minutes) : 0=No timeout
Time of Time-out (for Idle)	2	Value(1-120 minutes) : 0=No timeout
Real Time Command	TCP	Select option
TCP port	9100	Value(1024-65535)
UDP port	3000	Value(1024-65535)

Items	Default Value	Detail
Number of TCP Connections	1	Select the maximum number hosts that can be connected. (1-6)
Time of Time-out (for Link Down)	120 min	Set time of time-out for link down. (0-120 min). When this value is 0, Time-out disables.
Time of Time-out (for Idle)	2 min	Set time of time-out for Idle. (0-120 min). When this value is 0, Time-out disables.
Real Time Command	TCP	Select protocol of Real Time command. (TCP/UDP)
TCP port	9100	Set port number of TCP RAW. This port number range is 1024 to 65535. When "Real Time Command" setting is TCP, it is used by sending and receiving of Real Time Command.
UDP port	3000	Set port number of UDP command. This port number range is 1024 to 65535. This is effective when "Real Time Command" setting is UDP.

# Other Ethernet Setting

[ Ethernet ]		
MAC Address	80-00-0e-4e-40-03	Unchangeable
Physical Layer	Auto ▼	Select option

Items	Default value	Detail
MAC Address	_____	Show MAC Address of the printer Ethernet interface.  This is the unique value for each Ethernet interface and show only.
Physical Layer	Auto	Select connection Speed and Duplex. (Auto / 10Mbps Half/10 Mbps Full / 100Mbps Half/ 100Mbps Full)

## SNMP Setting

This section discusses configuration parameters and default values for the SNMP setting.

### SNMP - Configuration

[ Community ]

Read Only	public	Unchangeable
Read/Write	<input type="text"/>	Maximum 16 character

[ SNMP Trap1 ]

IP Address	<input type="text" value="0"/> <input type="text" value="0"/> <input type="text" value="0"/> <input type="text" value="0"/>	Value(0-255): Valid address
Community Name	<input type="text"/>	Maximum 16 character

[ SNMP Trap2 ]

TRAP	Disabled ▼	Select option
IP Address	<input type="text" value="0"/> <input type="text" value="0"/> <input type="text" value="0"/> <input type="text" value="0"/>	Value(0-255): Valid address
Community Name	<input type="text"/>	Maximum 16 character

## SNMP Community Setting

Items	Default value	Detail
Read Only	public	Show SNMP community read only name. Maximum length is 16 characters.
Read/Write		Set SNMP community read-write name. Maximum length is 16 characters.

## SNMP IP Trap1 Setting

Items	Default value	Detail
TRAP	Disable	Select whether SNMP TRAP is "Enable" or "Disable".
Address	0.0.0.0	Set address of host that receives SNMP TRAP.
Community Name		Set SNMP TRAP community name. Maximum length is 16 characters.

## SNMP IP Trap2 Setting

Items	Default value	Detail
TRAP	Disable	Select whether SNMP TRAP is “Enable” or “Disable”.
Address	0.0.0.0	Set address of host that receives SNMP TRAP.
Community Name		Set SNMP TRAP community name. Maximum length is 16 characters.

---

## Appendix A: **Printer Specifications**

---

### Printing Specifications

Print head	<ul style="list-style-type: none"><li>• Fixed</li><li>• 576 Print Elements</li><li>• Direct Thermal</li><li>• Fixed Head</li><li>• Line of Dots</li></ul>
Character Cell	Standard: 13 x 24 Dots Compressed: 10 x 24 Dots
Character Size	0.0525-inch wide by 0.092-inch high
Character Spacing	15.25 characters per inch (horizontal)
Character Pitch	15.6 characters per inch (Standard) 20.3 characters per inch (Compressed)
Columns (maximum)	For 80-mm paper: <ul style="list-style-type: none"><li>• 44 Columns (Standard)</li><li>• 56 Columns (Compressed)</li></ul> For 58-mm paper: <ul style="list-style-type: none"><li>• 32 Columns (Standard)</li><li>• 42 Columns (Compressed)</li></ul>
Print Mode	Standard, Compressed, Double High, Double Wide, Upside Down, Rotated, Underline, Scalable, Bold, Superscript, Italic, Subscript
Resident Fonts	Code Page 437, 850, 852, 860, 863, 865, 858, 866, 1252, 1256, Katakana *Unicode support (UTF-16)
Speed	355.6 mm/sec
Print Order	Descending

Line Spacing	7.52 lines per inch (default) 8.47, 8.13, 7.81, 7.25, 7.00, 5.98 lines per inch and variable lines per inch.
Print Zone	2.83 inches maximum
Noise	57 dBA Sound Pressure (ISO 7779)
ECO	Paper reduction, Power reduction
Other	No Reverse Paper Feed

# Power Requirements

The printer receives power either from a host system (integrated) or from a separate in-line power supply (remote) which can be purchased separately. Models receiving power from a power supply use one cable for communication and a separate cable for power.

## Power Modes

Below are the available power modes of the printer.

- **NCR Terminal Power–Low Mode (Term Pwr–Low):** Maximum allowable printing cycle power consumption is 55W.
- **NCR Terminal Power–High Mode (Term Pwr–High):** Maximum allowable printing cycle power consumption is 55W.
- **NCR 60W Power Supply Mode (NCR 60W Ext Pwr):** Maximum allowable printing cycle power consumption is 60W.
- **NCR 75W Power Supply Mode (NCR 75 Ext Pwr):** Maximum allowable printing cycle power consumption is 75W.

## Power from Host

The host computer must provide a +24V supply to the printer. Voltage variation in the 24V line may be within 21.6 and 26.4 volts. Surge protection must be provided. To do this, place a 3.2 Ampere time delay fuse on the +24V line.

## Power from External Power Supply

The external power supply must provide a +24V line of power to the printer. Surge protection must be provided.

- When NCR 75W external power supply is used, select **(NCR 75W Ext Pwr)** mode.
- When NCR 60W external power supply is used, select **(NCR 60W Ext Pwr)** mode.

# Physical and Operating Environment

## Temperature and Humidity

	Temperature	Humidity
Operating	5 to 50°C (41 to 122°F)	5% to 90%
Storage	-10 to 55°C (14 to 131°F)	10% to 90%
Transit	-40 to 60°C (-40 to 140°F)	5% to 95%
Condensation	Condensation may occur when the printer is moved from cold to warm areas after shipment. The printer's design permits operation after drying out and stabilizing at room temperature.	

## Reliability

The numbers in the table refer to the Mean Cycle Between Failure (MCBF) for the items indicated.

**Note:** Reliability statistics are based on averages exhibited under lab conditions and do not constitute a warranty.

Component	Reliability
Thermal Mechanism	60 Million Lines
Communications Card (RS232/USB)	43.45 Million Hours
Communications Card (LAN)	26.3 Million Hours
Main PCB	1.65 Million Hours
Knife	2 Million Cuts

## Dimensions and Weight

<b>Height</b>	130.0 mm (5.12 in.)
<b>Width</b>	125.8 mm (4.95 in.)
<b>Depth</b>	163.0 mm (6.42 in.)
<b>Weight</b>	1.1 kg (2.42 lbs)

---

## Appendix B: Re-flashing the Printer Firmware

---

Flash Utility is used to flash the firmware and font files to the printer.

**Note:** For the detailed procedure, refer to the *NCR Printer Flash Utility Owners Guide* from the NCR web site, [http://www5.ncr.com/support/support\\_drivers\\_patches.asp?Class=External\Peripherals\Printer\FlashUtility\display](http://www5.ncr.com/support/support_drivers_patches.asp?Class=External\Peripherals\Printer\FlashUtility\display).

---

## Appendix C: **Lean Receipt Utility**

---

Lean Receipt Utility is used to set the printer ECO setting from the utility.

For detailed procedure, refer to the Lean Receipt utility user manual from the NCR web site: [http://www5.ncr.com/support/support\\_drivers\\_patches.asp?Class=External\Peripherals\Printer\LeanReceiptUtility\display](http://www5.ncr.com/support/support_drivers_patches.asp?Class=External\Peripherals\Printer\LeanReceiptUtility\display).

# Appendix D: Print Characteristics

## Character Size

This section shows the dot pattern for characters printed on the receipt station.

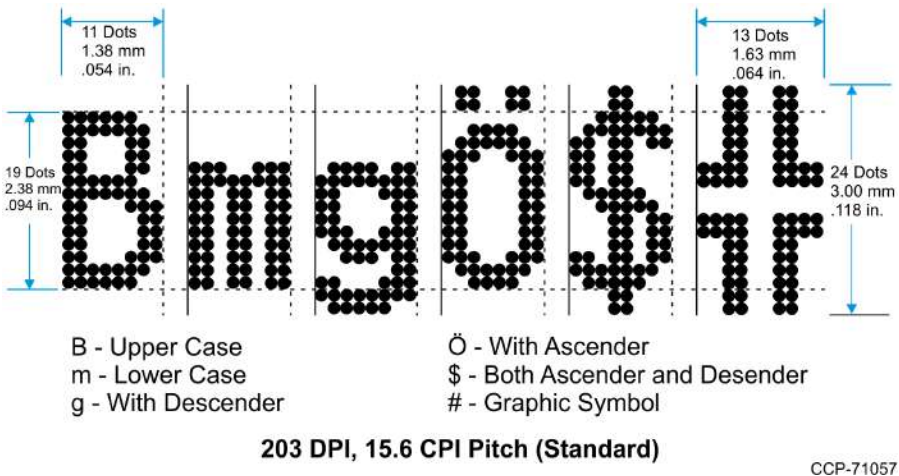

### Receipt Station

The following two illustrations show the dot patterns of sample characters for standard pitch (15.6 CPI) and compressed pitch (20.3 CPI).

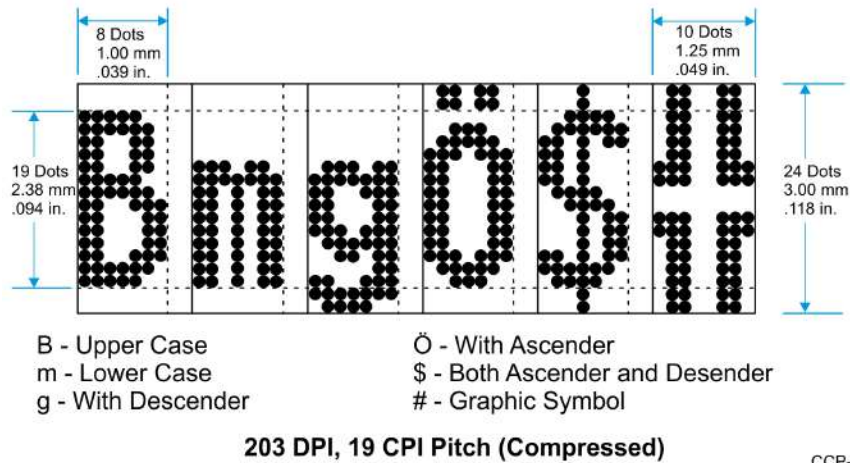

**Note:** Compressed pitch uses fewer dots horizontally than standard pitch.

#### Standard Pitch

CCP-71057

#### Compressed Pitch

CCP-71058

# Print Zones

This section shows the printable area for the receipt station.

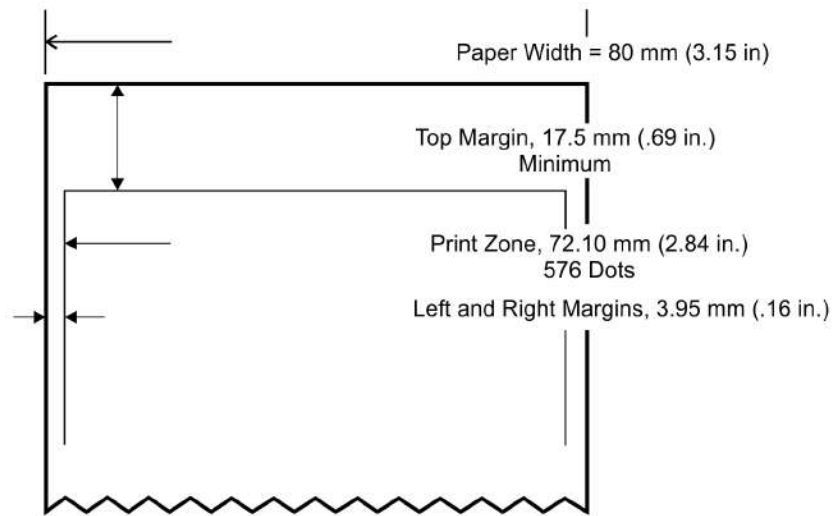

## Receipt Station

### For 80-mm Paper

The receipt station centers characters (standard pitch and compressed pitch) and graphics on a receipt with a width of 27 dots or **80 mm** (3.15 inches).

- Standard pitch: 13 x 24 dots in character cell, 44 characters (columns) per line
- Compressed pitch: 10 x 24 dots in character cell, 56 characters (columns) per line
- Double byte character: 24 x 24 dots in character cell, 24 characters (columns) per line
- Graphics: 576 addressable bits

The minimum print line height is 24 dots for characters and 24 dots for graphics. The standard print line height is 27 dots or **3.38 mm** (0.133 inches) for characters (with three extra dot rows). Refer to the illustration below (not to scale).

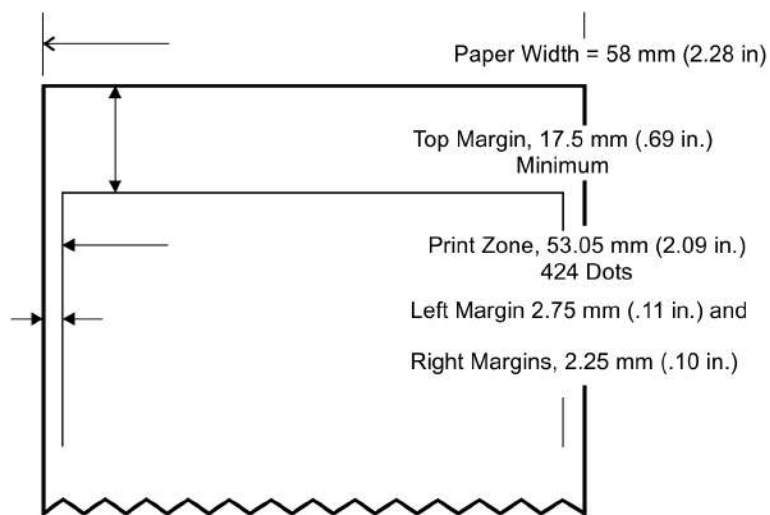

CCP-71054

### For 58-mm Paper

The receipt station centers characters (standard pitch and compressed pitch) and graphics on a receipt with a width of **58 mm** (2.28 inches).

- Standard pitch: 13 x 24 dots in character cell, 32 characters (columns) per line
- Compressed pitch: 10 x 24 dots in character cell, 42 characters (columns) per line
- Double byte character: 24 x 24 dots in character cell, 17 characters (columns) per line
- Graphics: 424 addressable bits

The minimum print line height is 24 dots for characters and 24 dots for graphics. The standard print line height is 27 dots or **3.38 mm** (0.133 inches) for characters (with three extra dot rows). Refer to the illustration below (not to scale).

CCP-71053

---

## *Appendix E:* **Thai Code Page Function**

---

### Outline

7199 RealPOS Thermal Receipt Station Printer supports printing of Thai characters. Code Page 874 (Thai) supports Thai character, but, some characters of them define only a part of one character. Actual Thai character is made up of a combination of some characters (maximum 4 characters in CP 874) for one Thai character. 7199 RealPOS Thermal Receipt Station Printer supports the function which synthesizes Thai character from Code Page 874's characters.

## Validate Thai Code Page Function

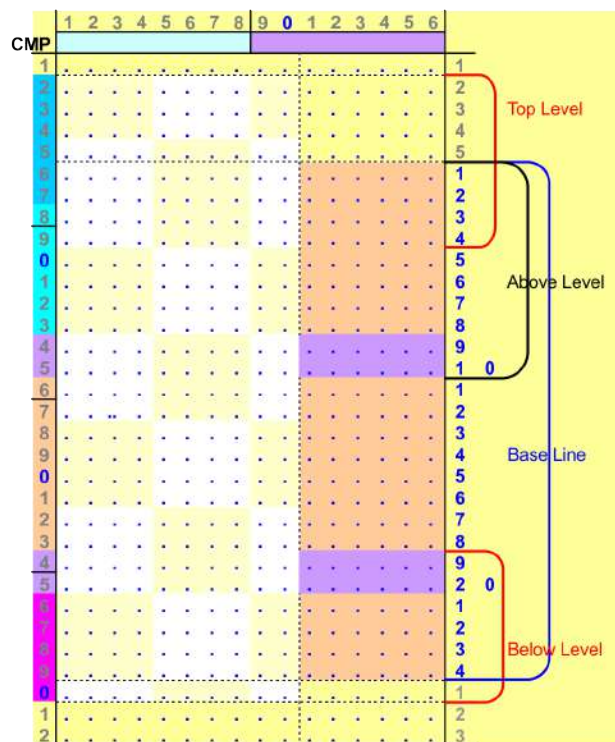

The Thai code page function is validated when the following conditions are selected.

- Online mode
- Asian Mode = OFF
- Code Page = 874

### Thai Character Configuration

The character cell of Thai character is made up of a maximum 4 parts—Top level, Above level, Base line and Below level.)

- **Top Level**—places the Top level characters only. Top level character is placed on the Above characters.
- **Above Level**—places the Above level characters only. The Above level character is placed on the Base line characters.
- **Base Line**—places the Base level characters and Low code characters.
- **Below Level**—places the Below level characters. The Below level character is placed under the Base line character.

Below mentions about each character type.

	ก	ข	ค	ด	ข	ง	จ	ฉ	ช	ฌ	ญ	ฎ	ฏ	
ฐ	ฑ	ฒ	ด	ต	ถ	ท	ธ	น	บ	ป	ผ	ฝ	พ	ฟ
ภ	ม	ย	ร	ฤ	ล	ฎ	ว	ศ	ษ	ส	ห	ฬ	อ	ฮ
ะ	ั	ำ	ำ	อ	า	ะ	า							฿
เ	แ	เ	เ	เ	เ	เ	เ	เ	เ	เ	เ	เ	เ	©
๐	๑	๒	๓	๔	๕	๖	๗	๘	๙	๐				

CCP-71043

### ***Base line characters***

- Base line characters are the characters encircled in red, purple, and pink.
- The characters encircled in purple will not have below level characters, but they are rarely used.
- The characters encircled in pink will not have top level and above level. Only the ๗ character is rarely used.
- Every character encircled in red and purple must have a top and below level.

### ***Top level/Above level characters***

- Characters encircled in blue are Top level/Above level characters.
- Characters encircled in red and purple, and the ๗ character can be both top and above level.
- The characters encircled in blue on the fifth line can be top level when above level character exists. The fourth line characters encircled in blue can be above level only. The fifth line characters encircled in blue can be both top and above level.

### ***Below level characters***

- Characters encircled in green are Below level characters. It is impossible that the top, above and below characters are in one character.

## Thai Character Data Procedure

Thai character data string uses the following format:

Base character, <Below character >, <Above character>, <Top character>, Base character, .....

The printer checks whether the received character is the Base character. If the Top, Above, Below characters are sent before the Base character, these characters are ignored.

After receiving the Base character, the printer checks the next character until it receives the next Base character.

If next character is the Below character, the Above character or Top character, 7199 RealPOS Thermal Receipt Station checks whether these Thai characters are valid for the current Base character. If valid, 7199 RealPOS Thermal Receipt Station merges the characters images on the Base character image. If invalid, the characters are ignored.

## Notes for this Function

This function supports standard pitch font and compressed pitch font. Thai character height is 34 dots. The below command functions change, and are different from other code pages.

<b>SYN</b>	Add <i>n</i> Extra Dot Rows. <b>Note:</b> When CP874 is selected, the line Pitch is 34 + <i>n</i> dot
<b>ESC 2</b>	Set Line Spacing to 1/6 inch. <b>Note:</b> When CP874 is selected, this command is ignored.
<b>ESC 3</b>	SetLine Spacing. <b>Note:</b> When CP874 is selected, valid parameter value is >= 34.

The line pitch is changed by below commands because the code page is changed.

<b>ESC R</b>	Select international character set.
<b>ESC t</b>	Select character code table. <b>Note:</b> Same as ESC R.
<b>ESC %</b>	Set/cancel the user-defined character set.
<b>ESC L</b>	Set page mode.
<b>ESC S</b>	Select standard mode.
<b>FF</b>	Form Feed in page mode.

## Limitation

The unicode command is ignored under the Thai code page function. When the Asian mode = *ON*, the Thai character image is not synthesized. Each character is printed separately.

---

## Appendix F: Arabic Font Support

---

### Outline

7199 RealPOS Thermal Receipt Station supports several features of Arabic font, such as the following:

- Contextual forms
- Word ligatures
- Reverse the Arabic strings

These features can be achieved based on the proportional font and they are available according to the following conditions:

- Arabic Proportional font exist in DBCS font area.
- Asian Mode is disabled.
- Codepage 1256 is selected or Arabic characters (0600–06FF) are specified in Unicode mode.

If Arabic proportional font does not exist in the DBCS font area, the above-mentioned features are not available, and Codepage 1256 isolated characters are printed in fixed pitch.

### Contextual Forms

Arabic letters have contextual forms, depending on surrounding letters in the same word: a typical-three letter word will start with a letter in initial form, followed by a letter in medial form and, finally, by a letter in final form

Curly writing is a way to write a word with connection to all the characters in that word. This feature is supported in contextual forms.

### Word Ligatures

**Arabic Presentation Forms-A** has a few characters defined as *word ligatures* for terms frequently used in formulaic expressions in Arabic. By way of example, the common ampersand (&) represents the conjunctive word *and*. The ampersand symbol is a ligature.

## Reverse the Arabic strings

Arabic writing is from right to left by aligning right margin. The data received by the printer will reverse the arabic string and print as per the Arabic format, which is right to left.

## Proportional Font

The printer has the following resident proportional characters for Arabic functions (Unicode base).

Lower characters	0020–007F
Arabic (Basic)	0600–06FF, 225 characters
Arabic Supplement	0750–077F, 48 characters
Arabic Extended-A	08A0–08FF, 39 characters
Arabic Presentation Forms-A	FB50–FDFF, 535 characters
Arabic Presentation Forms-B	FE70–FEFF, 140 characters

The characters of Codepage 1256 are covered by the above-mentioned characters.

## Proportional Font Conversion Handling of Arabic

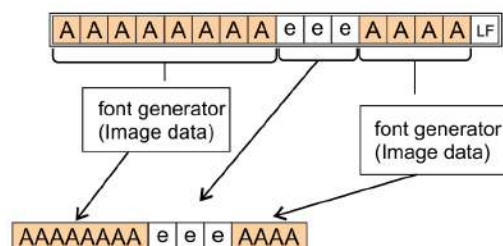

Express a code as follows

Proportional font code of Arabic:  
(Include Lower character)

Other codes: A

Receiving data e

PrintOut

Select Unicode Mode (ESC +) : Uni  
IN

Cancel Unicode Mode (ESC +) : Uni  
OUT

CCP-71055

## Limitations

Due to the features of Arabic font, there are several limitations in terms of the character attributes. For more information on the command description, refer to the *NCR RealPOS 7199 Thermal Receipt Station Printer Programmer's Guide (BCC5-0000-5170)*. Please see the command description of Print Characteristic Commands in detail.

## Invalid command list

The following table contains a list of commands that are not available if a new Arabic character is used.

Command	Command name	Remarks
ESC DC2	Select 90 Degree Counter-Clockwise Rotated Print	
ESC SYSN	Select Pitch (Column Width)	
ESC SP	Set Character Right-Side Spacing	
ESC !	Select Print Modes	Bit0, Bit3 Invalid
ESC %	Select or Cancel User-Defined Character Set	
ESC & 3	Define User-Defined Characters	
ESC :	Copy Character Set from ROM to RAM	

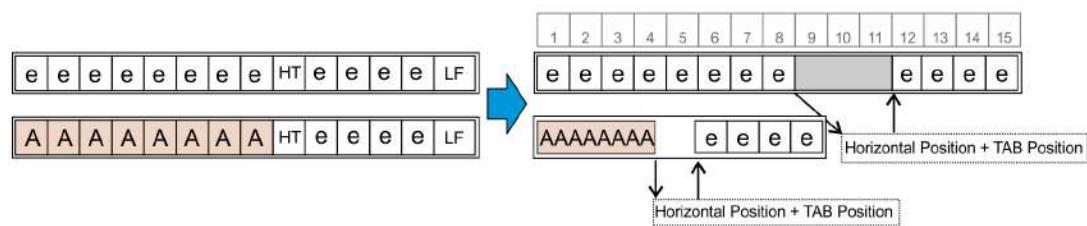

Command	Command name	Remarks
ESC ?	Cancel User-Defined Characters	
ESC E	Select or Cancel Emphasized Mode	
ESC G	Select Double Strike	
ESC H	Cancel Double Strike	
ESC I	Select or Cancel Italic Print	
ESC V	Select or Cancel 90 Degrees Clockwise Rotated Print	
ESC {	Select or Cancel Upside Down Printing Mode	
US ENQ	Selects Superscript or Subscript Modes	

The following table contains a list of commands which are ignored if the command is sent in the middle of a line that includes an Arabic character.

Command	Command name	Remarks
DC2	Select Double-Wide Characters	
ESC -	Select or Cancel Underline Mode	
ESC r	Select Print Color	
GS !	Select Character Size	
GS B	Select or Cancel White/Black Reverse Printing Mode	
ESC !	Select Print Modes	Bit4, Bit5 Invalid

## Horizontal Positioning Commands

Ex) HT Horizontal Tab (6,12,18)

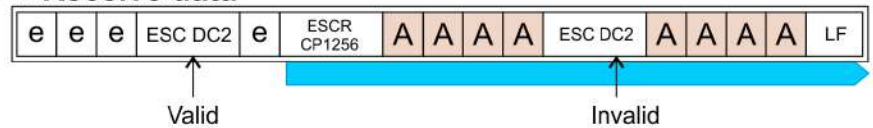

CCP-71059

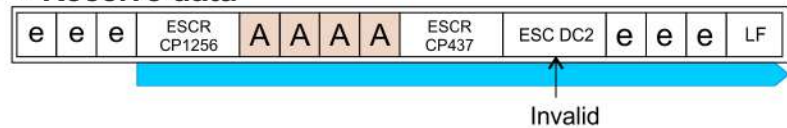

## Invalid command (sample)

Ex) ESC DC2 Select 90 Degree Counter-Clockwise Rotated Print
